

Persian, Step by Step, Root by Root

A gentle, etymology-driven introduction to Iranian Persian

Adhithya Rajasekaran

Starter edition — fourteen short chapters, with more being written.

Preface

This book teaches Persian one word at a time, and it teaches each word by taking it apart. It assumes no Persian and no Perso-Arabic script: every section takes one small expression, introduces only the letters and grammar that expression needs, connects it to words you may already know, and ends by asking for it back. Persian reads right to left — but you will be reading real words long before you have met the whole alphabet.

This is contemporary Iranian Persian. Romanization stays beside the script for now and fades as your reading grows. Where formal written and colloquial forms diverge, both are labelled rather than quietly averaged; Dari and Tajik are relatives of this language, not substitutes for it, and are not smuggled in here.

Persian vocabulary comes in historical layers. Some everyday words are inherited Iranian forms; many others arrived through Arabic and now follow Persian pronunciation and grammar completely. Etymology in this book is practical — it gives a word a handhold in your memory — and never a claim that a borrowed word is less fully Persian today.

This is a starter edition: fourteen short chapters, complete in themselves, with more being written.

How to use this book

Every numbered section is one word, or one small phrase, and takes a few minutes — the length of a queue, an errand, or the walk to the bus. Read them in order the first time through: each section stands on the ones before it, and nothing is used before it has been taught. After that the book becomes reference, and you can open it anywhere.

Say the Persian out loud wherever you can. The prompts under *Your turn* are written to be spoken, and saying a word is most of what makes it stay. The questions under *Before you move on* carry their own answers in brackets: cover them, answer from memory, then look.

Chapter 1

Greetings and responses

Modes: ⇄ voice (4) ✍ pen (2) ⇄ Hands-free start: first 1 of 6 lessons.

This chapter builds one miniature exchange in dependency order: greet, thank, answer yes, answer no. Four short expressions are enough to establish the direction of the script, joining, one non-joining letter, omitted short vowels, and the contrast between borrowed and inherited vocabulary.

1.1 سلام (*salâm*) — hello through peace

Read only what this expression needs

Persian runs **right to left**. Read سلام from its right edge: س *s*, ل *l*, ا *long â*, م *m*. Most letters join inside a word. The tall ل is a non-joiner on its left side, so the final م begins a new stroke group. No other letters are required yet.

Where the expression came from

Salâm means “hello” and evokes peace. Persian borrowed it from Arabic, whose consonant family **s-l-m** carries ideas of peace, safety, and wholeness. Hebrew *shalom* belongs to the same older Semitic family. The word is borrowed history and completely ordinary modern Persian at once.

Use it now

Say سلام to one person or a group. It is a neutral, friendly greeting. Hear it, answer with the same word, and resist adding any grammar

yet.

One-minute checkpoint

Read سلام from right to left. Which letter carries the long *â*? Point to ل, cover the romanization, and say *salâm* once.

1.2 ممنون (*mamnun*) — thank you

Read only what this expression needs

Reuse final م from سلام, now at the right edge where reading begins. The visible sequence is م *m*, م *m*, ن *n*, و long *u*, ن *n*. Persian usually omits short vowels, so the first *a* is learned with the whole word. Here و carries the long *u*.

Where the expression came from

Persian received *mamnun* from Arabic. It describes someone as grateful or obliged and belongs to the Arabic **m–n–n** family associated with favor or kindness. In current Persian conversation, the whole word is simply a useful “thanks.”

Use it now

Build the smallest exchange: A says سلام; B answers سلام; A adds ممنون. Treat each expression as one social move.

One-minute checkpoint

Which visible letter carries long *u* in ممنون? Point to و, then say *salâm* — *mamnun* without looking.

1.3 بَـ (bale) — yes

Read only what this expression needs

Read three letters: ب *b*, ل *l*, ه *h*. The short *a* and *e* are supplied by the reader rather than written as separate letters. The final ه remains visible even though careful speech ends with a light vowel-like sound rather than a forceful English *h*.

Use it now

Bale is a standard polite affirmative. A more casual answer exists, but one reliable “yes” is enough now: *bale*, *mamnun* — yes, thank you.

One-minute checkpoint

Cover *bale*. Read بَـ; name the two short vowels that the writing leaves implicit; answer “yes” once.

1.4 نَـ (na) — no, and an inherited bridge

Read only what this expression needs

You already know final ه from بَـ and ن from ممنون. Put ن on the right and read نَـ: *n* plus an unwritten short *a*.

Where the expression came from

Unlike the two Arabic loans at the start of this chapter, Persian *na* continues an old Indo-Iranian negative family. Related forms occur across Iranian and Indo-Aryan languages. This is the first bridge from Persian toward Hindi and Urdu: not an instruction to learn those forms now, just a reason the tiny word may feel familiar later.

Use it now

Contrast only the answer: بَـ *bale* — yes; نَـ *na* — no. Ask yourself a harmless yes/no question and answer it both ways.

One-minute checkpoint

Without looking back, produce the four-step chain: hello, thank you, yes, no. Then read *نه, بله, ممنون, سلام* in the same order.

Chapter 2

Give your name

Modes: 🗣️ voice (1) 🗣️ Hands-free start: all 1 lesson.

By the end of this chapter: I can say my name in Persian in one careful sentence, and I can hear the small linking -e that ties the name to its owner.

One careful sentence with a slot for your own name: esm-e man ... ast, with the spoken ezafe doing the linking.

2.1 اسم من ... است — my name is ...

Greet once, then answer yes and no. The next line gives you one careful sentence for your own name.

The exchange

Read the phrase from right to left, but say its words in this order:

اسم من ... است — *esm-e man ... ast*

- اسم *esm* = name. You already recognize ا, س, and م.
- The small spoken **-e** after *esm* links “name” to its owner. This linker is called **ezafe**. It is often not written in ordinary text.
- من *man* = I / me; after the linker it means “my.”
- است *ast* = is.

The word, taken apart — and its English cousins

esm is an Arabic loan related to Arabic *ism*, while **man** and **ast** belong to Persian's inherited Iranian core. One tiny sentence can therefore show two major layers of Persian vocabulary.

Grammar Lens: one spoken link

Only one grammar idea is new: **noun + -e + owner**. The spoken **-e** links “name” to its owner, so *esm-e man* is literally “name-of me.” Do not turn that one pattern into a full grammar table yet.

Your turn

Replace the dots with your name:

است سارا من اسم. — *esm-e man Sârâ ast*. — My name is Sara.

Say these aloud:

- **esm-e man Sârâ ast**
- replace **Sârâ** with your own name

In everyday speech, the ending is often shortened. Keep the careful full form for now; it makes every part visible.

Before you move on

What links *esm* to *man*? The spoken **-e**, or *ezafe*. Say “My name is ...” once with your own name.

Chapter 3

Ask and Answer Names

Modes: 🗣️ voice (4) 👁️ eyes (1) 🖐️ Hands-free start: all 5 lessons.

By the end of this chapter: I can ask someone's name respectfully with shomâ, answer with my own, and tell them I am pleased to meet them.

A six-line first meeting: greet, ask the name with respectful shomâ, answer with your own, and acknowledge with khoshvaghtam.

3.1 شما / تو — two relationships inside “you”

Say **esm-e man ... ast** with your own name. To turn that sentence around, you next need a safe word for the other person.

The two words

Persian	read	use
شما	shomâ	one person respectfully, or more than one person
تو	to	one familiar person

In شما, meet ش *sh*; its three dots distinguish it from س *s*. Final ل carries long â. In تو, و has its *o* value rather than the long *u* it had in ممنون. Learn the sound from the whole word.

Grammar Lens: begin respectfully

Persian uses plural **shomâ** for respectful singular address, much as Russian uses *vy* and French uses *vous*. Use **shomâ** with an unfamiliar adult or in a first meeting. Use **to** after the relationship is familiar. English once made a similar distinction but now uses *you* for both.

The word, taken apart — and its English cousins

Persian **to** belongs to the ancient Indo-European familiar-“you” family: English **thou**, Latin *tū*, and Sanskrit *tvam* are relatives. The word is old; the social choice carried by it is current.

Your turn

Say these aloud:

- a new adult — **shomâ**
- a close friend — **to**
- the old family — **to, thou, tū, tvam**

Before you move on

Which form is safest when the relationship is new? (**Shomâ**.)

Which is the relative of English *thou*? (**To**.)

Source: Persian Online: Pronouns.

3.2 چیست — “what is?” in one joined word

Which “you” is safe for a new adult? (شما, *shomâ*.) Now add the question engine that will follow “your name.”

You’ll want to know first — چیست

چیست — *chist* — what is?

Read from the right: چ *ch*, ی long *i*, س *s*, ت *t*. چ is one of Persian’s four additions to the Arabic alphabet: it uses the same base shape as ج, with three dots below. Meet only this joined form now.

Grammar Lens: two words compressed

chist is the careful fusion of **chi** “what” and **ast** “is.” The opening vowel of *ast* disappears when the pieces join:

chi + ast → **chist**

You already know full **ast** from *esm-e man ... ast*. This lesson changes no copula rule; it gives one high-frequency fused question form.

Your turn

- Say it: **chi + ast** → **chist**
- Read it: چیست from چ to ت
- Say it: **chist?** — “what is?”

Before you move on

What two pieces make **chist**? (**Chi + ast**.) Which new Persian letter opens it? (چ, *ch*, with three dots below.)

3.3 چیست؟ شما اسم — ask a name respectfully

Give the three ready pieces: **esm-e** “name-of,” **shomâ** respectful “you,” and **chist** “what is?”

The exchange

چيست؟ شما اسم — *esm-e shomâ chist?* — **What is your name?**

The Persian order is transparent once the pieces are known:

name + **-e** + you + what-is?

The spoken ezafe turns **esm-e shomâ** into “your name.” **Chist** stays at the end. No new agreement or verb table is hiding here.

Script: the question mark

Persian ends a written question with ؟. Its curve faces the opposite way from English ?, matching the right-to-left line. Read the sentence from its right edge; meet the punctuation at the far left.

Your turn

- *Say it:* **esm-e shomâ chist?**
- *Say it:* ask, then answer — **esm-e man ... ast**
- *Point to:* to ؟ at the end of the right-to-left question

Before you move on

Ask the question once without reading the romanization. Then answer with the careful name frame you already know.
Source: Persian Online: Introducing Yourself.

3.4 خوشوقتم — pleased to meet you

Ask **esm-e shomâ chist?** and answer **esm-e man ... ast**.
One warm response now closes that tiny meeting.

The exchange

خوشوقتم — *khoshvaghtam* — **Pleased to meet you.**

Treat the joined word as one social move first. خ gives *kh*, like the sound in Scottish *loch*. ش gives *sh*. Persian commonly pronounces ق here with the merged *gh/q* sound of contemporary Iranian speech.

The word, taken apart — and its English cousins

- **khosh** — pleasant, happy; inherited Persian vocabulary.
- **vaqt** (pronounced *vaght* here) — time; an Arabic loan fully at home in Persian.
- **-am** — I am, the first-person ending.

So the word builds “pleasant-time-I-am” into the idiomatic feeling “I

am pleased.” The history is layered; the expression is ordinary modern Persian.

Your turn

Say these aloud:

- **khoshvaghtam** as one smooth response
- the three pieces — **khosh + vaqt + -am**
- which piece came from Arabic — **vaqt**

Before you move on

Which response closes the introduction? (**Khoshvaghtam.**) Which three layers can you hear inside it? (**Khosh + vaqt + -am.**)
Source: Persian Online: Introducing Yourself.

3.5 Practice — a complete Persian name exchange

Recall the four moves without adding anything: greet, ask, answer, acknowledge.

The exchange

A: سلام! — *Salâm!* B: سلام! — *Salâm!* A: چیست؟ شما اسم —
Esm-e shomâ chist? B: است سارا من اسم. — *Esm-e man Sârâ*
ast. A: خوشوقتم. — *Khoshvaghtam.* B: ممنون. — *Mamnun.*

Every line is already known. **Shomâ** keeps the first meeting respectful; the answer returns to **man**. The question mark sits at the left end of the right-to-left question.

Your turn

Say these aloud:

- both voices, using your own name

- the exchange again without romanization
- only the three name moves — question, answer, response

Before you move on

Run the meeting once from **salâm** to **mamnun**. If one line stalls, review that single micro-lesson rather than rereading the whole chapter.

Chapter 4

How Are You?

Modes: 🗣️ voice (6) 🖱️ Hands-free start: all 6 lessons.

By the end of this chapter: I can ask how someone is in careful respectful Persian and answer that I am well, thank you.

The careful wellbeing exchange in two moves: hâl-e shomâ chetor ast? answered khubam, mamnun.

4.1 حال — the “state” in a wellbeing question

Run only the opening of the meeting you know: **salâm** and the name question. The next move asks about the other person’s present state.

You’ll want to know first — one useful word

حال — *hâl* — state, condition

Read from right to left: ح *h* + l long â + ل *l*. The first letter is a breathier *h* than English normally uses; a clear ordinary *h* is a safe beginner approximation. Keep the whole written word attached to its meaning.

The word, taken apart — and its English cousins

Persian borrowed **hâl** from Arabic, then uses it with Persian grammar. You will soon say **hâl-e shomâ**, literally “the state of you.” That **-e** is the same spoken ezafe already learned in **esm-e shomâ**.

Your turn

- *Say it:* **hâl** — state or condition
- *Read it:* حال from right to left
- *Connect:* an Arabic-rooted noun inside Persian ezafe grammar

Before you move on

What does **hâl** name? (A state or condition.) Which familiar linker will attach an owner to it? (Ezafe **-e**.)
Source: Persian Online: Greetings List.

4.2 چطور — “how?” one layer at a time

Say the Persian noun for a state or condition. (**Hâl**.) Now ask about the manner of that state with one question word.

You’ll want to know first — the question word

چطور؟ — *chetor?* — **how?** / **in what manner?**

You already met چ *ch* in چیست. Here it is followed by ط *t*, و *o*, and ر *r*. The short *e* is not written. Learn the sound from the whole word: *che-tor*.

The word, taken apart — and its English cousins

Persian Online takes چطور apart as Persian چه *che*, “what,” plus the Arabic loan طور *tor*, “manner.” The literal picture is “in what manner?” That layered history is useful memory, but **chetor** is one everyday Persian question word now.

Your turn

- *Say it:* **chetor?** — how?
- *Point to:* to familiar چ at the right edge
- *Rebuild:* **che** “what” + **tor** “manner”

Before you move on

Which part means “what”? (**Che.**) Which borrowed part means “manner”? (**Tor.**)

Source: Persian Online: Interrogatives.

4.3 است؟ چطور شما حال — ask “How are you?” respectfully

Recall **hâl** “state,” **shomâ** respectful “you,” **chetor** “how,” and careful **ast** “is.” The only assembly move is familiar ezafe.

The exchange

است؟ چطور شما حال — *hâl-e shomâ chetor ast?* — **How are you?**

Build it without translating English word for word:

state + **-e** + respectful-you + how + is?

The unwritten ezafe in **hâl-e shomâ** works exactly like **esm-e shomâ**. Persian asks, literally, “the state of you, in what manner is?”

Grammar Lens: one reliable careful form

This chapter asks you to produce the careful written form with **ast**. Everyday Iranian speech often contracts the end to *چتوره؟ chetore?*; recognize that preview, but keep the uncontracted line until the careful pattern is secure.

Your turn

- *Say it:* **hâl-e shomâ chetor ast?**
- *Trace it:* **hâl-e shomâ** — state-of-you
- *Choose:* careful production now — final **ast**

Before you move on

Ask once from memory. What already-known grammar holds **hâl** and **shomâ** together? (Ezafe -e.)

Source: Persian Online: Greetings List.

4.4 خوب — “good” and “well”

Ask **hâl-e shomâ chetor ast?** The smallest positive answer begins with one word.

You’ll want to know first — the answer word

خوب — *khub* — good, well

At the right edge, خ is *kh*, made farther back than English *h*. و carries long *u*, as it did in ممنون; final ب closes the word with *b*. Say it as one beat: *khub*.

The word, taken apart — and its English cousins

Persian’s everyday vocabulary is layered. **Hâl** and the **tor** inside **chetor** came through Arabic; **khub** belongs to the inherited Persian layer. All three are fully ordinary Persian now. History helps memory without ranking one layer as more authentic than another.

Your turn

- *Say it:* **khub** — good, well
- *Read it:* خ + long-*u* و + final ب
- *Contrast:* inherited **khub** beside borrowed **hâl**

Before you move on

Give the answer word once without romanization. Which letter carries its long *u*? (و.)

Source: Persian Online: Greetings List.

4.5 ممنون خوبم، — “I am well, thank you”

Say **khub** “well,” then the thanks you learned in Chapter 1: **mamnun**. One small ending turns the first word into a full answer.

The exchange

ممنون خوبم،. — *Khubam, mamnun*. — **I am well, thank you.**

The new final م is *m*. Attach it directly to خوب: خوب + م → خوبم. Persian script and speech both keep the answer compact.

Grammar Lens: one copula ending, not a table

The attached ending **-am** means “I am” here. Persian Online notes that خوبم by itself already means “I am fine”; the separate pronoun **man** is unnecessary. Learn only this useful first-person ending today. The rest of the copula set can arrive one form at a time later.

Your turn

- *Build:* **khub** + **-am** → **khubam**
- *Say it:* **khubam, mamnun**
- *Point to:* to final م carrying “I am”

Before you move on

What does final **-am** contribute? (“I am.”) Do you need a separate **man** in this answer? (No.)

Sources: Persian Online: Verb “To Be” and Greetings List.

4.6 Practice — a Persian wellbeing exchange

Recall the two moves only: ask about the other person’s state, then answer “I am well, thank you.”

The exchange

A: است؟ چطور شما حال! سلام! *Salâm! Hâl-e shomâ chetor ast?* B:
ممنون خوبم. *Khubam, mamnun.*

Every piece is already owned. The question reuses respectful **shomâ**, ezafe, and careful **ast**. The answer's final **-am** carries "I am," so no new pronoun is hiding between the lines.

Grammar Lens: keep the social choice visible

Use this careful question in a first meeting. You may hear shorter conversational forms, but producing one stable respectful line first prevents script, register, and contraction from arriving as one oversized step.

Your turn

- *Say it:* both voices with the script visible
- *Say it:* both voices without romanization
- *Switch:* ask first, then answer after a pause

Before you move on

Run the exchange once from **salâm** to **mamnun**. If one side stalls, return to that single micro-lesson rather than rereading the chapter.

Chapter 5

Take Leave

Modes: 🗣️ voice (4) 🗣️ Hands-free start: all 4 lessons.

By the end of this chapter: I can open a short Persian conversation, check how the other person is, and close it with *khodâ hâfez*.

A four-line interaction with a beginning and an end: salâm, the wellbeing check, then khodâ hâfez from both voices.

5.1 خدا — the Persian half of a farewell

Run the known wellbeing exchange once. The next chapter adds only the final social move: ending that interaction.

You'll want to know first — one word

خدا — *khodâ* — God

Read from right to left: خ *kh* + د *d* + ا long *â*. The short *o* is learned with the word rather than written as a separate letter. Keep the back-of-the-mouth **kh** gentle; clarity matters more than force.

The word, taken apart — and its English cousins

Modern **khodâ** continues Middle Persian *xwadây*, “lord.” The everyday farewell will pair this inherited Persian word with an Arabic loan. That mixed history is normal Persian vocabulary, not an exception to memorize away.

Your turn

- *Say it:* **khodâ** — God
- *Read it:* خدا from the right edge
- *Connect:* modern **khodâ** ← Middle Persian *xwadây* “lord”

Before you move on

Which letter carries the final long â? (l.) Which vowel is heard but not written separately? (The short o.)
Source: Wiktionary: خدا.

5.2 حافظ — “guardian” or “protector”

Read خدا and say **khodâ**. Keep it separate: this lesson adds only the second word behind the farewell.

You’ll want to know first — one word

حافظ — *hâfez* — **guardian, protector**

Read ح ا ف ا ح from right to left. ا carries long â. In contemporary Persian, final ط is pronounced **z** here, so say *hâ-fez*, not an English *th* sound. The short *e* is part of the learned word and is normally unwritten.

The word, taken apart — and its English cousins

Arabic **ḥāfiẓ** is an active participle from the root **ḥ-f-ẓ**, “guard, preserve.” Persian borrowed the word and uses its Persian pronunciation **hâfez**. Keep the useful meaning first; the root is a memory hook.

Your turn

- *Say it:* **hâfez** — guardian, protector
- *Read it:* حافظ
- *Connect:* Arabic **ḥ-f-ẓ** — guard, preserve

Before you move on

What does **hâfez** contribute to the farewell? (The idea of guarding or protecting.)

Source: American Heritage Dictionary: *hafiz*.

5.3 خدا حافظ — goodbye

Retrieve **khodâ** and **hâfez** separately: “God” + “guardian.”
Now let them become one everyday social move.

The two words — put the known pieces together

خدا حافظ — *khodâ hâfez* — goodbye

Persian normally writes the two spoken pieces together. Start with خدا, add حافظ, and read the joined spelling خدا حافظ from the right edge. Keep the two meaning layers available underneath the complete form.

Grammar Lens — a complete wish without a full sentence

The expression carries the protective sense “God [be] guardian,” but everyday speakers use the whole formula simply as **goodbye**. No new verb is required for beginner production. It is a broadly polite, reliable way to end the short respectful interaction built in Chapters 1–4.

Your turn

- *Build:* **khodâ** + **hâfez**
- *Read it:* joined خدا حافظ
- *Use:* say it only when the interaction ends

Before you move on

When do you use **khodâ hâfez**? (At parting, not at the opening.)
Source: Persian Online: Greetings List.

5.4 Practice — open, check, and close

Without looking ahead, retrieve the expression for the beginning and the expression for the end. Do not add a new middle line.

The exchange — the complete interaction

A: سلام! است؟ چطور شما حال! *Salâm! Hâl-e shomâ chetor ast?* B: ممنون خوبم. *Khubam, mamnun.* A: خدا حافظ. *Khodâ hâfez.* B: خدا حافظ. *Khodâ hâfez.*

Every line is already learned. **Salâm** opens; **khodâ hâfez** closes. The same farewell works for both voices, so no pronoun, agreement ending, or new register table is hiding inside the practice.

Your turn

- *Choose*: meeting begins → **salâm**
- *Choose*: interaction ends → **khodâ hâfez**
- *Run through*: both voices once with script, once without romanization

Before you move on

Run the full exchange once. If the final line stalls, return only to the assembled-farewell lesson rather than rereading the chapter.

Chapter 6

Name a Verb, Find Its Stem

Modes: ⇄ voice (5) ⇄ Hands-free start: all 5 lessons.

By the end of this chapter: I can name five core Persian verbs in their dictionary form, recognise the -tan/-dan ending that marks any Persian infinitive, and give the present stem that each verb carries beside it.

The five pairs run back to back from memory — budan, raftan/rav-, âmadan/â-, goftan/gu-, dânestan/dân- — with the infinitive ending named and the stem produced for each.

6.1 بودن — “to be,” and the ending every Persian verb wears

Chapter 4 ended on خوبم *khubam*, “I am well.” That **-am** carried “I am” with no verb beside it. This chapter names the verb it belongs to.

You’ll want to know first — one verb

بودن — *budan* — to be

Four letters, all of them already yours. From the right edge: ب *b*, و long *u*, د *d*, ن *n*. Persian و never joins to the letter on its left, so the word falls into two clumps, بو and دن — the same kind of break ل makes inside سلام.

Grammar Lens: how a Persian verb announces itself

English names a verb with a word in front of it: *to be, to go, to know*. Persian names it with an ending on the back. Every Persian infinitive — every one, with no list of exceptions — finishes in **-تن** *-tan* or **-دن** *-dan*.

بودن is *bu + dan*. Whenever a Persian word ends in *-tan* or *-dan*, you are holding a verb in its naming form.

Persian rewards you here: one set of personal endings serves every verb. What it asks instead is one extra fact per verb — the next lesson is about that fact.

The word, taken apart — and its English cousins

budan continues Middle Persian *būdan*, from the Indo-European root **bheu-*, “to grow, to become, to be.” English **be** and **been** are that root, worn smooth. So are German *bin*, Latin *fuī* “I was” — the ancestor of English **future** — and Sanskrit *bhavati*.

The resemblance runs through Persian’s plainest words: **مادر** *mâdar* is **mother**, **پدر** *pedar* is **father**, **برادر** *barâdar* is **brother**, **دختر** *dokhtar* is **daughter**, **نام** *nâm* is **name**. Nobody borrowed these; both languages inherited them.

One caution to carry through the chapter: lookalikes lie. Persian **بد** *bad* does mean “bad,” but its history and the English word’s are unconnected. A cousin has to be traced, not guessed.

Your turn

- *Say it:* **budan** — to be
- *Read it:* **بودن** from the right edge, in its two clumps
- *Name:* the ending that marks a Persian infinitive — **-tan / -dan**
- *Connect:* **budan** ← **bheu-* → English **be, been**
- *Retrieve:* the ending on **خویم** that already meant “I am”

Before you move on

How does a Persian verb announce that it is a verb? (It ends in *-tan* or *-dan*.) Which English word is **budan**? (**Be** — the same inherited

root.) Is Persian **bad** a cousin of English *bad*? (No; that one is coincidence.)

Source: Wiktionary: بودن.

6.2 رفتن — “to go,” and the second form that travels with it

Retrieve the Persian for “to be,” and the ending that marked it as a verb. That ending returns here, on a word that brings the extra fact Persian asks of you.

You’ll want to know first — one verb

رفتن — *raftan* — to go

From the right edge: ر *r*, ف *f*, ت *t*, ن *n* — all four familiar, ر from چطور *chetor* and ف from حافظ *hâfez*. ر does not join leftward, so it stands alone and رفتن follows as one run. The ending is the *-tan* you met on بودن.

Grammar Lens: the second fact every Persian verb carries

Persian keeps two forms for each verb, and you learn them as a pair. The first is the infinitive, رفتن *raftan*. Strip its *-an* and you have رفت *raft*, the **past stem**; everything about yesterday is built on that. The second is the **present stem**, and it cannot be predicted from the infinitive. For *raftan* it is رو *rav*. Everything about now is built on *rav-*: *mi-ravam* “I go,” *mi-ravad* “she goes.” So the fact to store is not *raftan* alone but **raftan** → **rav-**, said in one breath. Get the pair and the whole verb opens: the endings that follow a stem are the same for every Persian verb.

The word, taken apart — and its English cousins

رفتن *raftan* continues Middle Persian *raftan*; its deeper Indo-European ancestry is genuinely unsettled, so no English cousin is claimed for it here.

The split itself needs no excuse — English does the same thing. *Go* and *went* are two unrelated words sharing one verb; so are *be* and *was*. English calls that irregularity and buries it in a list. Persian makes it

the ordinary shape of a verb and says so up front.

رو *rav* is short: ر, then و, with no join between them. Say the pair aloud until it sounds like one item — *raftan*, *rav*.

Your turn

- *Say it*: **raftan** — to go
- *Say it*: the pair as one item — **raftan, rav**
- *Read it*: رفتن, then رو
- *Name*: the ending that made **raftan** an infinitive
- *Retrieve*: the Chapter 6 verb meaning “to be” — **budan**

Before you move on

Which two facts does a Persian verb ask you to store? (The infinitive and its present stem.) What is the pair for “to go”? (**Raftan, rav**.) Could *rav*- have been worked out from *raftan*? (No — which is why it is learned with the word.)

Source: Wiktionary: رفتن.

6.3 آمدن — “to come,” and an alef that wears a hat

Say the pair for “to go” as one item. Now expect the same two-part shape from every verb that follows, including this one, which travels in the opposite direction.

You’ll want to know first — one verb and one new shape

آمدن — *âmadan* — to come

The last three letters are old friends: م *m*, د *d*, ن *n*, and the *-dan* ending tells you at once that this is an infinitive. The first shape is new. Ā is plain l with a small wavy stroke over it, called *madde*, and it is what Persian writes when a word opens on long â. Plain l at the start of a word carries a short vowel — that is the l in اسم *esm*. The hat is the difference between *esm* and *âmadan*.

The word, taken apart — and its English cousins

âmadan was built from a prefix **â-**, “toward,” and the very old verb root **gwem-*, “to go, to come.” In Old Iranian that gave a form like **â-gmata-*, “come toward”; the *g* wore away, the *m* survived, and Middle Persian **âmad** is what was left.

That root is one of the family’s great travellers. English kept it almost bare as **come**. Latin turned it into *venīre*, which English then borrowed back dozens of times over: **advent**, **adventure**, **convene**, **convenient**, **event**, **invent**, **avenue**, **revenue**, **prevent**, **souvenir**. Sanskrit has *gacchati*, “goes.” So *âmadan* and *come* are not lookalikes; they are the same word, four thousand years apart.

The present stem is $\bar{a}$ *â* — a single letter — heard as *ây-* before an ending: *mī-âyam* “I come.” Store the pair as **âmadan**, **â-**. It comes from a different ancient root than the infinitive does, which is exactly why the two look nothing alike.

Your turn

- *Say it*: **âmadan** — to come
- *Say it*: the pair as one item — **âmadan**, **â-**
- *Read it*: آمدن, starting at the hatted alef
- *Connect*: **âmadan** ← **gwem-* → English **come**, **advent**, **event**
- *Contrast*: **raftan**, **rav-** going out; **âmadan**, **â-** coming in

Before you move on

What does the little hat on $\bar{a}$ tell you? (The word opens on long **â**.) Which everyday English verb shares *âmadan*’s root? (**Come**.) And what is the pair for “to come”? (**Âmadan**, **â-**.)
Source: Wiktionary: آمدن.

6.4 گفتن — “to say,” written with a letter Arabic does not have

Say the pair for “to come.” Then hold the shape in mind: a name, and a present stem that has to be learned beside it. Here

is a third verb built the same way.

You'll want to know first — one verb and one new letter

گفتن — *goftan* — to say, to tell

Read from the right. The last three, ف *f*, ت *t*, ن *n*, close the word with the familiar *-tan*. The opening shape is گ *g*, called *gâf*: a long slanting stroke with a second slanting stroke laid above it.

Arabic has no *g*, so Persian made one. Persian adds four letters to the inherited Arabic set — پ *p*, چ *ch*, ژ *zh*, and گ *g* — and you have already read one of them, the چ inside چیست *chist*. Each is an Arabic letter with extra strokes: گ is the *k* shape wearing a second bar.

The word, taken apart — and its English cousins

The present stem is گو *gu*: گ then ُو, no join between them. *Mi-guyam* is “I say.” Store the pair as **goftan, gu-**.

Now the part that makes the pair unforgettable. Persian has an ordinary, everyday word for “conversation”: گفتگو *goftogu*. Pull it apart and it is the past stem گفت *goft*, a linking *-o-* meaning “and,” and the present stem گو *gu*. A conversation is literally *said-and-say*. The two halves of the verb, sitting next to each other in a noun you can hear on any Iranian news broadcast.

The verb is old. Old Persian, the language of Darius’s cliff inscriptions, already had the root *gaub-*, “to say, to call oneself.” Outside the Iranian branch its relatives are not securely established, so no English cousin is claimed here — and English *gab* and *gossip*, which look tempting, come from somewhere else entirely.

Your turn

- *Say it*: **goftan** — to say
- *Say it*: the pair as one item — **goftan, gu-**
- *Read it*: گ, then ُو, then گفتن
- *Build*: **goft** + *-o-* + **gu** → **goftogu**, conversation
- *Retrieve*: the pair for “to come” — **âmadan, â-**

Before you move on

Which letter opens گفتن, and why is it not in Arabic? (گ *gâf*; Arabic has no *g* sound.) What two pieces of the verb hide inside **goftogu**? (The past stem *goft* and the present stem *gu*.) Say the pair. (**Goftan**, **gu-**)

Source: Wiktionary: گفتن.

6.5 دانستن — “to know,” and five pairs held together

Name the ending that marks a Persian infinitive. The last verb of the chapter wears it, and every letter in the word is one you can already read.

You’ll want to know first — one verb and its stem

دانستن — *dānestan* — **to know**

From the right: د *d*, | long â, ن *n*, س *s*, ت *t*, ن *n*. Nothing new to decode, which is a good place to be six lessons into a script.

The present stem is دان *dân*: *mi-dānam*, “I know.” The pair is **dānestan**, **dân-** — and this stem is one you can watch working. دانش *dānesh* is “knowledge”; add گاه *gâh*, “place,” and you get دانشگاه *dāneshgâh*, **university** — a knowledge-place, built straight off the stem.

The word, taken apart — and its English cousins

dānestan belongs to the Indo-European root **gnō-*, “to know.” English inherited it three times over: **know**, and also **can** (originally “to know how”), **ken**, **cunning**, and **uncouth**, which is literally “un-known.” Latin’s *nōscere* sent English **notice**, **notion**, **note**, **recognise**, **cognition**, and **noble** — a noble person being a known one. Greek *gnōsis* gives **diagnosis**, **prognosis**, **agnostic**. Sanskrit has *jânâti*, “knows.”

One honest footnote: specialists still argue about how this root arrived in Persian wearing a **d**, when its Iranian relatives usually show a *z* or *zh*. The membership in the family is standard; the road it took is disputed, and this book flags that rather than smoothing it over. Persian’s other “know” is شناختن *shenâkhtan*, used for knowing a

person rather than a fact. Its stem شناس *shenâs*- shows the same root more plainly — it is the *gnos*- of *gnosis*, wearing Iranian clothes. And بودن *budan* has a present stem too: باش *bâsh*-. It waits for the chapter where the present tense arrives.

Your turn

- Say it: **dânestan**, **dân**- — to know
- Say it: **raftan**, **rav**- — to go
- Say it: **âmadan**, **â**- — to come
- Say it: **goftan**, **gu**- — to say
- Say it: **budan** — to be
- Build: **dân** → **dânesh** → **dâneshgâh**, university
- Connect: **dânestan** ← **gnō*- → English **know**, **can**, **diagnosis**

Before you move on

Which two things does a Persian verb ask you to store? (Its name in *-tan* or *-dan*, and its present stem.) Which English words share **dânestan**'s root? (**Know**, **can**, and the *gnosis* family.) Now run all five pairs once, out loud, without the page.

Source: Wiktionary: دانستن.

Chapter 7

Four Verbs of the Mind

Modes: ⇄ voice (4) ⇄ Hands-free start: all 4 lessons.

By the end of this chapter: I can say think, understand, read and write in Persian, give the present stem of each, and tell which of the three ways a Persian verb is built each one uses.

The chapter closes on neveshtan, nevis-, then runs its four verbs back to back — fekr kardan with kon-, fahmidan with fahm-, khândan with khân-, neveshtan with nevis- — and names which is a compound, which hands its stem over free, and which two had to be told. The five pairs from Chapter 6 run after them, so all nine are produced from memory in one sitting.

7.1 کردن فکر — “to think,” written as two words

Name the two facts every Persian verb has asked you to store. This one brings a third shape: it is spelled as two words, and only the second is the verb.

You’ll want to know first — one verb in two pieces

کردن فکر — *fekr kardan* — **to think**

The first word, فکر *fekr*, is a noun: “thought.” From the right — ف *f*, ک *k*, ر *r*.

The second, کردن *kardan*, is the verb, and it means **to do, to make**. Its ending is the *-dan* you have collected since بودن *budan*. Word for word, the phrase is *thought to-do*.

Grammar Lens: Persian asks less of you than you fear

Persian has **no grammatical gender**, so nothing has to agree. It has **no noun cases**: a noun keeps one shape everywhere. Its adjectives **never change**. And it has exactly **one** set of personal endings — *-am*, *-i*, *-ad*, *-im*, *-id*, *-and* — taken by every verb in the language. What it asks instead is the present stem, and this: many of its commonest verbs are **two words**. A noun sits in front, and a plain verb behind it does the grammatical work. کردن *kardan* is the workhorse — put almost any noun in front of it and you have a verb. You met the same instinct in خوشوقت *khoshvaghtam*, which welded *khosh*, “good,” to *vaqt*, “time.”

The word, taken apart — and its English cousins

The halves come from opposite ends of Persian’s history. فکر *fekr* is a loan from Arabic فِكر *fikr*, “thought,” on the root *f-k-r*, and it takes Persian grammar completely.

کردن *kardan* is as Persian as a word gets: Old Persian *kar-*, “to do,” from the Indo-European root **k^wer-*, “to make.” That root gave Sanskrit *karoti*, “he does,” and *karman*, “deed” — which English borrowed outright as **karma**. English has no inherited cousin here, so that is a borrowing, not a family resemblance, and this book says which is which.

The present stem is کن *kon*: *mi-konam*, “I do.” Store **kardan**, **kon-**, and note the opening ك *kâf* — the shape گ *gâf* is built from, as گفتن *goftan* wears it with a second bar.

Your turn

- *Say it*: **fekr kardan** — to think
- *Split*: **fekr**, thought — **kardan**, to do
- *Say it*: the pair as one item — **kardan**, **kon-**
- *Read it*: ك in کردن, then گ in گفتن — one bar apart
- *Retrieve*: the two words welded inside **khoshvaghtam**
- *Name*: the ending that marks **kardan** as an infinitive

Before you move on

Which half of **fekr kardan** is the verb, and what is its present stem? (**Kardan**; **kon-**.) Name two of the four things Persian does without. (Gender, cases, adjective agreement, a second set of endings.)

Source: Wiktionary: کردن.

7.2 فهمیدن — “to understand,” and the class that gives its stem away

Say the two words meaning “to think,” and which of them is the verb. Then say the pair for “to know.” This lesson adds the verb that sits between them.

You’ll want to know first — one verb, one word this time

فهمیدن — *fahmidan* — to understand

One word, not two. From the right: ف *f*, ه *h*, م *m*, ی long *i*, د *d*, ن *n*. The ی is the letter you first read inside چیست *chist*.

Persian keeps دانستن *dānestan* and فهمیدن *fahmidan* apart the way English keeps *know* and *understand* apart. *Dānestan* stores a fact; *fahmidan* grasps a point.

Grammar Lens: the one stem you never have to be told

Every verb so far handed you an unpredictable stem: *raftan* gave *rav-*, *goftan* gave *gu-*. Here is the relief.

When a Persian infinitive ends in -یدن *-idan*, its present stem is what is left once you take the *-idan* off. Nothing shifts. فهمیدن *fahmidan* minus *-idan* leaves فهم *fahm*: *mī-fahmam*, “I understand.” The pair is **fahmidan**, **fahm-**, and you could have worked it out yourself.

This is no small exception. **-idan** is the suffix Persian reaches for whenever it needs a new verb, so the predictable class is large and growing. The verbs that fight you are the old inherited ones.

The word, taken apart — and its English cousins

فهم *fahm* is Arabic — **فَهَمَ**, “understanding,” from the root *f-h-m*. Persian took the noun and did something Arabic would not: it glued a native Persian suffix onto it and made a verb. You have now watched Arabic words arrive three ways. **وقت** *vaqt*, inside *khoshvaghtam*, came as a noun and stayed one. **حال** *hâl* came as a noun and took Persian’s own linking grammar. **حافظ** *hâfez* came as a participle and became a name. And **فهم** *fahm* was turned into a Persian verb outright. Against all of them stands **خوب** *khub*, inherited Persian from the start, borrowed from nobody. Persian vocabulary is layered, and neither layer is less Persian than the other today.

Your turn

- *Say it:* **fahmidan** — to understand
- *Derive:* strip *-idan* from **fahmidan** → the stem **fahm-**
- *Contrast:* **dânestan** stores a fact; **fahmidan** grasps a point
- *Retrieve:* the pair for “to know” — **dânestan**, **dân-**
- *Name:* three Arabic arrivals — *vaqt*, *hâl*, *hâfez* — and one inherited word, *khub*
- *Read it:* the **ی** inside **فهمیدن**, the letter you first met in **چیست**

Before you move on

How do you get the present stem of any *-idan* verb? (Take the *-idan* off.) Which of Persian’s layers did **fahm** arrive from, and which layer does **khub** belong to? (*Fahm* is Arabic; *khub* is inherited Persian.)

Source: Wiktionary: **فهمیدن**.

7.3 خواندن — “to read,” and a letter that is written but not said

Say the pair for “to understand,” and how you got its stem without being told. This verb is not so obliging — and its spelling

hides something.

You'll want to know first — one verb with a silent letter

خواندن — *khândan* — **to read**

From the right: خ *kh*, و, | long â, ن *n*, د *d*, ن *n*. Six letters — but only five sounds. The و in second position is written and **not pronounced**. The word is *khândan*, never *khwândan*.

That خ opens خوب *khub*, “good,” where the و works as a vowel. Here it does nothing.

The silent و belongs to a small, closed set of words — always after خ, before |. Not a rule to apply, just words you recognize.

Grammar Lens: one verb, four English verbs

The present stem is خوان *khân* — same silent و, so *khân-*. *Mi-khânam*, “I read.” The pair is **khândan, khân-**.

Now the surprise. خواندن also means **to recite, to sing and to study**. English splits those jobs across separate words; Persian does not, and the reason is in the word’s history.

The word, taken apart — and its English cousins

khândan is from Proto-Iranian **hwanH-*, “to call,” from the Indo-European root **swenh₂-*, “**to sound**.” The four meanings become one idea: reading, reciting and singing all *make a text sound*. For most of history, reading was reading aloud.

Latin took the root as *sonus*, which English borrowed over and over: **sound, sonic, resonate, consonant, sonata**. Sanskrit has *svanati*, “it sounds.” And English inherited one word directly, without Latin’s help — **swan**, most likely “the sounding one.”

The silent و is a fossil of this: the Iranian root began *hw-*, and Persian spelled the cluster long after it stopped saying it. خدا *khodâ* comes from the same *xw-* family, continuing Middle Persian *xwadây* — gone from both mouths, surviving in one spelling.

One contrast to fix: the long â here is plain | because it sits inside the word. When a word *opens* on long â, Persian writes Ā with its hat, as آمدن *âmadan* does.

Your turn

- *Say it:* **khândan** — to read
- *Say it:* the pair as one item — **khândan, khân-**
- *Read it:* خواندن, sounding the خ and skipping the و
- *List:* the four jobs of one verb — read, recite, sing, study
- *Connect:* **khândan** ← **swenh₂*- → English **sound, swan**
- *Contrast:* ُ inside a word, ̄ when a word opens on long â

Before you move on

How many letters does خواندن have, and how many sounds? (Six and five.) Which four English verbs does it cover, and why those four together? (Read, recite, sing, study — its root means *to sound*.)
Source: Wiktionary: خواندن.

7.4 نوشتن — “to write,” and four verbs of the mind held together

Say the pair for “to read,” and name the letter in it that is written but never said. Its natural partner closes this chapter.

You’ll want to know first — one verb and its stem

نوشتن — *neveshtan* — to write

From the right: ن *n*, و *v*, ش *sh*, ت *t*, ن *n*. Here the و *is* pronounced — a plain consonant *v* — the exact contrast the last lesson set up.

The present stem is نویس *nevis*: *mi-nevisam*, “I write.” The pair is **neveshtan, nevis-**, as unpredictable as *raftan, rav-* was. Name the price plainly: **the stem of an inherited verb cannot be worked out, so it is learned in the same breath as the infinitive.**

Watch the stem earn its keep: نویس *nevis-* plus *-ande* gives نویسنده *nevisande*, “**writer**.” The stem, not the infinitive, is what Persian builds on.

The word, taken apart — and its English cousins

neveshtan is an Old Persian compound: **ni-**, “down,” plus the root **paiš-*, “to adorn, to mark, to paint.” To write was to *paint something down* — a verb Darius had carved into a cliff at Behistun.

The root is Indo-European **peyk-*, “to cut, to mark, to paint.” Latin made it *pingere*, and English has borrowed from that ever since:

paint, picture, pigment, depict. So *neveshtan* and *picture* are one root, one branch writing, the other painting.

Trace the *p* if you like a puzzle: it softened to *b* in Middle Persian *nibištan*, then to the *v* in *nevis-*.

Grammar Lens: what this chapter has actually given you

Four verbs, three ways a Persian verb can be built.

فکر کردن *fekr kardan* is a **compound**: noun plus *kardan*. فهمیدن *fahmidan* is a **-idan verb**, stem free. خواندن *khândan* and نوشتن *neveshtan* are **inherited verbs**, stems you must be told.

Three shapes, one set of personal endings for all of them — the whole verb system in outline.

Your turn

Run the chapter’s four, then the five that came before, without the page.

- *Say it:* **fekr kardan** — to think; **kardan, kon-**
- *Say it:* **fahmidan, fahm-** — to understand
- *Say it:* **khândan, khân-** — to read
- *Say it:* **neveshtan, nevis-** — to write
- *Say it:* **budan** — to be; **raftan, rav-;** **âmadan, â-;** **goftan, gu-;** **dânestan, dân-**
- *Build:* **nevis** + *-ande* → **nevisande**, writer
- *Connect:* **neveshtan** ← **peyk-* → English **paint, picture**
- *Name:* the English cousins of **budan** and **dânestan** — **be** and **know**

Before you move on

Which of this chapter's four verbs is a compound, and which one hands you its stem for free? (**Fekr kardan**; **fahmidan**.) What did *neveshtan* originally mean? (To paint down.) Now say all nine pairs you hold, in any order.

Source: Wiktionary: نوشتن.

Chapter 8

Taking, Asking, Helping, Loving

Modes: ⇄ voice (4) ⇄ Hands-free start: all 4 lessons.

By the end of this chapter: I can say take, ask, help and love in Persian, give the present stem where a verb has one, and sort all thirteen verbs I hold into compounds, -idan verbs and inherited verbs.

The chapter closes on dust dâshtan — to have as friend — and its dâr- stem, then runs all thirteen verbs the track has taught: this chapter’s four, Chapter 7’s four, and Chapter 6’s five, each with its stem, sorted into the three shapes a Persian verb can take.

8.1 گرفتن — “to take,” and a cousin you can hear

Say the pair for “to write.” Then get ready for a Persian verb whose English relative you will recognize the moment you hear it.

You’ll want to know first — one verb and its stem

گرفتن — *gereftan* — **to take**

From the right: گ *g*, ر *r*, ف *f*, ت *t*, ن *n*. The opening shape is گ *gâf*, the letter Persian added because Arabic has no *g* — the same one that opens گفتن *goftan*. Neither گ nor ر joins leftward, so the word arrives in three small pieces and closes on the familiar *-tan*.

The present stem is گیر *gir*: *mi-giram*, “I take.” The pair is **gereftan, gir-** — inherited, and so unpredictable, exactly as promised.

Persian uses it widely: to take, to get, to catch, to hold, to seize. It is a hand closing around something.

The word, taken apart — and its English cousins

gereftan continues Middle Persian *griftan*, from Old Persian *grab-*, “to seize,” from the Indo-European root **g^hrebh₂-*, “to grab, to seize.” Say *gir-* and *grip* one after the other. Say *gereftan* and *grab*. That is not a coincidence and it is not a loan in either direction — English and Persian both inherited the word from a common ancestor, and four thousand years later the consonants *g-r-b* are still sitting in both. English kept **grab**, **grip**, **grasp**, **grope** and **gripe**; German kept *greifen*; Sanskrit has *grhṇāti*, “he seizes”; Russian has *grabit’*, “to rob.” Collect the evidence you already hold. بودن *budan* is English **be**. تو *to* is English **thou** — the old familiar you, which English has nearly retired and Persian uses daily. Persian is not a distant relative of English in an unfamiliar script; it is a cousin. Persian has repaid the family too. English **bazaar**, **caravan**, **khaki**, **pyjama**, **lemon**, **spinach** and **paradise** all came from Persian — the last of them from Old Persian *paridaida*, “a walled garden.”

Your turn

- *Say it:* **gereftan** — to take
- *Say it:* the pair as one item — **gereftan**, **gir-**
- *Read it:* گ opening گرفتن, then گ opening گفتن
- *Connect:* **gir-** → English **grip**; **gereftan** → English **grab**
- *Retrieve:* two cousins you already hold — **budan** is **be**, **to** is **thou**
- *Name:* three English words Persian gave away — **bazaar**, **khaki**, **paradise**

Before you move on

Which English verbs are **gereftan**’s own relatives? (**Grab**, **grip**, **grasp**.) Did English borrow it from Persian? (No — both inherited it.) Say the pair once more. (**Gereftan**, **gir-**.)
Source: Wiktionary: گرفتن.

8.2 پرسیدن — “to ask,” and the questions you could already ask

Say the pair for “to take.” Then put the respectful name question you have had since Chapter 3. You have been asking without owning the verb.

You’ll want to know first — one verb that behaves

پرسیدن — *porsidan* — to ask

From the right: پ *p*, ر *r*, س *s*, ی long *i*, د *d*, ن *n*. The opening پ *pe* is another letter Persian added — a ب *b* shape with three dots beneath instead of one.

Now the ending: -یدن *-idan*. Strip it, and the present stem remains: پرس *pors*. *Mi-porsam*, “I ask.” The pair is **porsidan**, **pors-** — the same free ride فهمیدن *fahmidan* gave you.

Grammar Lens: asking a question and asking a person

Two chapters ago you learned to *put* a question — چیست؟ شما اسم *esm-e shomâ chist?*, چطور شما حال *hâl-e shomâ chetor ast?* Both work by word order and a question word, with no verb meaning “ask” in them.

That is the ordinary case, as in English: you do not say “I ask you what your name is,” you just ask it. پرسیدن is for *talking about* the asking.

The noun from the same stem is پرسش *porsesh*, “a question”: stem plus -ش *-esh*, the machine that turned دان *dân-* into دانش *dânes*, “knowledge.”

The word, taken apart — and its English cousins

porsidan continues Middle Persian *pursīdan*, from Old Persian *pars-* — a word Darius used on stone — and beyond that the Indo-European root **prek-*, “to ask.” Sanskrit has *pr̥cchati*; German still says *fragen*. English is the interesting case. It **had** this root and lost it: Old English *frignan*, “to ask,” died out. Then English borrowed the root back from Latin, which had turned it into *precārī*, “to pray.” So English says **pray**, **prayer**, **precarious** — “held by prayer,” and so uncertain — and **deprecate**. A root the language once owned now

survives only as loans.

Your turn

- *Say it:* **porsidan** — to ask
- *Derive:* strip *-idan* → the stem **pors-**
- *Pair:* **porsidan**, **pors-** beside **fahmidan**, **fahm-** — both free
- *Contrast:* **gereftan**, **gir-** had to be told; these two did not
- *Build:* **pors** + *-esh* → **porsesh**, a question
- *Connect:* **porsidan** ← **prek-* → English **pray**, **precarious**

Before you move on

Which two verbs so far gave you their stems for free, and what do they have in common? (**Fahmidan** and **porsidan** — both end in *-idan*.) Why does English say **pray** rather than an inherited word here? (It lost its own and borrowed the root back from Latin.)

Source: Wiktionary: پرسیدن.

8.3 کردن کمک — “to help,” and the machine on its second run

Say the pair for “to ask.” Then the two words meaning “to think,” and which half of them is the verb. That half is about to do the same job twice over.

You’ll want to know first — one verb in two pieces, once more

کردن کمک — *komak kardan* — **to help**

Two words, and you already know the second one. کمک *komak* is a noun, “help, assistance.” From the right: ک *k*, م *m*, ک *k* — the same *kâf* twice, once joined and once standing free at the word’s end.

Behind it sits کردن *kardan*, doing exactly what it did in فکر کردن *fekr kardan*. Noun in front, *kardan* behind, and the pair is a verb. Its present stem is still کن *kon-*: *komak mi-konam*, “I help.”

This is the point of the pattern. You are not learning a second verb; you are learning a second **noun** and dropping it into a slot you already own.

The word, taken apart — and its English cousins

کمک *komak* is neither inherited Persian nor Arabic. It came from **Turkic** — Azerbaijani *kömək*, “help,” from Proto-Turkic **kōmek*. Turkic and Persian have been neighbours for a thousand years, and words crossed both ways.

So everyday Persian vocabulary holds three layers, and you have a word from each. خوب *khub*, “good,” is **inherited** Iranian. وقت *vaqt*, “time,” inside *khoshvaghtam*, is **Arabic**. کمک *komak* is **Turkic**. All three are ordinary Persian words today, and none is more Persian than the others.

The verb half is the oldest thing here: کردن *kardan* on the Indo-European root **k^wer-*, “to make.” A Turkic noun and an Indo-European verb in one phrase — Persian’s history in three syllables.

One script note: the ک *kâf* opening *komak* is the shape گ *gâf* is built from, one bar apart.

Your turn

- *Say it*: **komak kardan** — to help
- *Split*: **komak**, help — **kardan**, to do
- *Match*: **fekr kardan** and **komak kardan** — one machine, two nouns
- *Say it*: the stem still in place — **kardan**, **kon-**
- *Sort*: **khub** inherited, **vaqt** Arabic, **komak** Turkic
- *Retrieve*: the two words welded inside **khoshvaghtam**
- *Read it*: ک in کمک, then گ — one bar apart

Before you move on

Which half of **komak kardan** did you already know? (**Kardan**.)
 Which of Persian's three vocabulary layers did **komak** come from?
 (Turkic.) Name a word from each of the other two. (**Khub**,
 inherited; **vaqt**, Arabic.)
 Source: Wiktionary: کمک.

8.4 داشتن دوست — “to love,” which Persian says as “to have as friend”

Say the two words meaning “to help,” and the pair for “to ask.”

This last verb is a compound too — but not with *kardan*.

You'll want to know first — one verb in two pieces, a new second half

داشتن دوست — *dust dâshtan* — to like, to love

دوست *dust* is a noun: **friend**. From the right, د *d*, و long *u*, س *s*, ت *t*.

داشتن *dâshtan* is the verb, **to have, to hold**. Its present stem is دار *dâr*:
 the pair is **dâshtan, dâr-**.

So *dust dâshtan* is, word for word, **to have as friend**. *Dust dâram* is
 “I love” — literally “I hold [it] a friend,” built out of friendship rather than
 passion.

Notice what changed. کردن *kardan* made a noun into a *doing*. داشتن
dâshtan makes it a *holding*. Two light verbs, one pattern.

The word, taken apart — and its English cousins

Both halves are old, and both have English relatives.

دوست *dust* goes back through Old Persian *dauštā* to the Indo-European
 root **ǵews-*, “to taste, to choose.” A friend is *the one chosen*. English
 inherited it directly as **choose**; Latin took it as *gustus*, “taste,” giving
 English **gusto** and **disgust**.

داشتن *dâshtan* continues Old Persian *dāraya-*, “to hold,” from **dʰer-*.
 English has no inherited cousin here, but the root fills its borrowings:
 Latin *firmus*, “held fast,” gave **firm**; Greek *thronos* gave **throne**;
 Sanskrit built *dharma*, “that which holds the world together.”
 So Persian builds “I love you” from *choose* and *hold*.

Grammar Lens: what the two chapters add up to

Thirteen verbs now, and every one fits one of three shapes.

Compounds — *fekr kardan*, *komak kardan*, *dust dâshtan*: noun plus light verb. **-idan verbs** — *fahmidan*, *porsidan*: stem free. **Inherited verbs** — *budan*, *raftan*, *âmadan*, *goftan*, *dânestan*, *khândan*, *neveshtan*, *gereftan*: stem told, never guessed.

Behind all three: one infinitive ending; one set of personal endings; no gender, no cases, no agreement. The hard part of Persian is a list of stems.

Your turn

All thirteen, from memory.

- *Say it*: **gereftan**, gir-; **porsidan**, pors-; **komak kardan**; **dust dâshtan**, dâr-
- *Say it*: **fekr kardan**, kon-; **fahmidan**, fahm-; **khândan**, khân-; **neveshtan**, nevis-
- *Say it*: **budan**; **raftan**, rav-; **âmadan**, â-; **goftan**, gu-; **dânestan**, dân-
- *Split*: **dust**, friend — **dâshtan**, to hold
- *Sort*: which three are compounds, which two are *-idan*, which eight are inherited
- *Connect*: **dust** ← **ġews*- → English **choose**; **gereftan** → **grab**; **neveshtan** → **paint**

Before you move on

What does *dust dâshtan* say word for word? (To have as friend.)

Which light verb makes a *doing*, and which makes a *holding*?

(**Kardan**; **dâshtan**.) Now name all thirteen, with a stem for each that has one.

Source: Wiktionary: داشتن دوست.

Chapter 9

Please: Water, Bread, Tea, Key

Modes: 🗣️ voice (4) 🖱️ Hands-free start: all 4 lessons.

By the end of this chapter: I can politely ask for water, bread, tea, or my key in Persian, and I can name the four vocabulary layers those four words come from.

The chapter closes on kelid, a Greek loan, then runs all four requests back to back — âb, nân, chây, kelid, each with lotfan — and reuses the ezafe from Chapter 2 to ask for kelid-e man, my key.

9.1 آب — water, and Persian’s first “please”

The last chapter closed on داشتن *dâshtan*, “to have,” stem دار *dâr*. This chapter names what to ask for when you do not have it yet.

You’ll want to know first — one word

آب — *âb* — water

Two letters, both already yours: آ, alef with *madde*, from آمدن; then ب *b*.

Grammar Lens: your first Persian “please”

لطفاً آب. — *âb, lotfan.* — **Water, please.**

Name the thing you want, add لطفاً *lotfan*, and the request is complete — no verb required. لطفاً ends in a small hooked mark, ّ, called *tanvin*: an Arabic grammatical ending, pronounced *-an*, that survives in Persian only inside a short list of frozen Arabic adverbs borrowed

whole — لطفاً and تقريباً *taghriban*, “approximately,” are two of them — and plays no part in ordinary Persian spelling. This is the first request this track has built.

The word, taken apart — and its English cousins

آب continues Old Persian *āp-*, from Indo-European **h₂ep-*, “water” — the root Sanskrit kept as *áp-*, still visible today inside a place-name: **Punjab** is usually explained as this same word, پنج آب *panj āb*, “five waters,” naming the region’s five rivers.

Hindi and Marathi’s everyday word for water, **pānī**, is not this word at all. Sanskrit holds a second, unrelated root for water too — **pā-**, “to drink,” from **peh₃-*, the root hiding inside English **potion** and **poison** — and it is that second root modern Hindi and Marathi kept for everyday use. آب and **pānī** are not cousins; they are two different ancient words for the same thing, and Persian happened to keep the older one.

Your turn

- *Say it:* **âb** — water
- *Say it:* **âb, lotfan.** — water, please
- *Connect:* **âb** ← **h₂ep-* → Sanskrit **áp-**, and the **-âb** inside **Punjab**
- *Contrast:* **âb** against Hindi’s **pānī** — two different old words, not cousins
- *Retrieve:* **dâshtan, dâr-** — “to have,” from the chapter just closed

Before you move on

Ask for water politely. (**Âb, lotfan.**) What is the ّ at the end of لطفاً called, and where else does Persian use it? (*Tanvin*; only inside a few frozen Arabic adverbs.) Is Persian آب related to Hindi’s **pānī**? (No — two separate old words.)

Source: Wiktionary: آب; Wiktionary: لطفاً.

9.2 نان — bread, and a root this track cannot trace

Say لطفاً آب, (*âb, lotfan*). This chapter's second request names the other thing on every Persian table.

You'll want to know first — one word

نان — *nân* — bread

لطفاً نان. — *nân, lotfan.* — Bread, please.

Three letters, all already yours: ن ا ن — *n*, long *â*, *n* again.

The word, taken apart — and its English cousins

نان continues Middle Persian **nân**, and there this word's trail runs cold: no secure root beyond that form is agreed, and no English cousin can honestly be claimed. Not every word in this book gets a family tree, and this one is named plainly rather than forced into one.

The word travelled anyway, just not by inheritance. Persian نان passed into Hindi-Urdu as **nân**, and from there into English as **naan** — the bread on a restaurant menu is this exact word, arriving by borrowing three languages after Persian, not by any shared ancestor.

Your turn

- *Say it:* **nân** — bread
- *Say it:* **nân, lotfan.** — bread, please
- *Name:* the one fact this word's history gives you — Middle Persian **nân**, root beyond that unknown
- *Trace it:* **nân** → Hindi-Urdu **nân** → English **naan** — a borrowing, not a cousin
- *Run through:* **âb, lotfan** — **nân, lotfan** — two requests back to back

Before you move on

What does نان mean? (**Bread.**) Does it have a secure Indo-European cousin? (No — the trail runs cold at Middle Persian **nān**.) Which English word is this same word, borrowed rather than inherited? (**Naan**, via Hindi-Urdu.)

Source: Wiktionary: نان.

9.3 چای — tea, and the road that gave everyone but Europe the same word

Say, لطفاً نان, (*nân, lotfan*). Here is the drink that usually comes with it.

You'll want to know first — one word

چای — *chây* — tea

لطفاً چای. — *chây, lotfan*. — **Tea, please.**

Three letters, all already yours: چ *ch*, from چيست; long â; ی as a closing glide.

The word, taken apart — and its English cousins

چای is not an inherited Persian word at all — it is a loan, and a comparatively recent one. It continues Northern Chinese **chá**, carried overland through Central Asia into Persian, the same road Russian **chai** and Turkish **çay** travelled.

The word did not stop at Persian. چای itself passed onward into Urdu as چائے *chây*, the same three-step road: Chinese into Persian into Urdu. Tea that instead reached Europe by **sea** carried a different, southern-Chinese form, which is why English says **tea** and French says *thé* rather than *chai*: one drink, two words, sorted by whether it travelled by land or by water.

Your turn

- Say it: **chây** — tea
- Say it: **chây, lotfan**. — tea, please

- *Name:* the road — Chinese **chá** → Persian **chây** → Urdu **chāy**
- *Contrast:* **chây**, which travelled by land, against **tea**, which travelled by sea
- *Run through:* **âb, lotfan** — **nân, lotfan** — **chây, lotfan**

Before you move on

Which language gave Persian چای? (**Chinese**, overland.) Which language borrowed this exact Persian word onward? (**Urdu**, as چائے.) Why does English say **tea** instead? (It arrived by sea, carrying a different Chinese form.)

Source: Wiktionary: چای.

9.4 کلید — key, a Greek word Persian has held for two thousand years

Say لطفاً چای. Then recall the small linking *-e* the first sentence taught inside من اسم — you will need it again in a moment.

You'll want to know first — one word

کلید — *kelid* — **key**

Four letters, all already yours: ک *k*, from کمک; ل *l*; ی long *i*; د *d*.

Grammar Lens: a possessive request, built from an old part

لطفاً من، کلید. — *kelid-e man, lotfan.* — **My key, please.**

No new grammar here — this reuses the ezafe **-e** exactly as من اسم did, now linking a household word to its owner instead of a name. A request can carry an owner the same way a name did.

The word, taken apart — and its English cousins

کلید is not inherited Persian at all — it is a loan from Greek **kleidíon**, “little key,” one of a handful of Greek words that entered Persian in the Hellenistic centuries after Alexander’s conquest, when Greek-speaking rulers governed Iranian land for generations. The

parent word, **kleís**, shares its Indo-European root with Latin *claudere*, “to close” — the root behind English **close**, **conclude**, and **exclude**. This chapter’s four words now stand for all three of Persian’s vocabulary layers: inherited آب, an untraceable نان, an overland Chinese loan in چای, and a Greek loan in کلید.

Your turn

- *Say it:* **kelid** — key; then **kelid-e man, lotfan** — my key, please
- *Connect:* **kelid** ← Greek **kleidíon** → Latin *claudere* → English **close, conclude, exclude**
- *Run through:* **âb, nân, chây, kelid** — each with , **lotfan**
- *Sort:* which of the four is inherited, which is untraceable, which travelled by land, which came from Greek
- *Retrieve:* the ezafe **-e** from من اسم, now on من کلید

Before you move on

Which language did Persian borrow کلید from, and when? (Greek, after Alexander.) Say “my key, please.” (**Kelid-e man, lotfan.**) Name all four polite requests this chapter built. (**Âb, nân, chây, kelid**, each with **lotfan.**) Source: Wiktionary: کلید.

Chapter 10

Mother, Father, Brother, Daughter

Modes: 🗣️ voice (4) 🗣️ Hands-free start: all 4 lessons.

By the end of this chapter: I can name my mother, father, brother, and daughter in Persian, the four secure English cousins Chapter 6 named without teaching.

The chapter closes on dokhtar, daughter, then runs all four family words back to back and reuses the ezafe from esm-e man ast and kelid-e man to say dokhtar-e man, my daughter.

10.1 مادر — mother, a word this track already promised you

The بودن lesson traced it back to English **be**, and in passing named four plainest inherited cousins the track had not yet taught as their own lessons: مادر, پدر, برادر, دختر. This chapter and the next finally give each one its own lesson, starting here.

You'll want to know first — one word

مادر — *mâdar* — **mother**

Four letters, all already yours: م د ا — *m*, long *â*, *d*, *r*.

The word, taken apart — and its English cousins

مادر continues Middle Persian **mādar**, from Indo-European **méh₂tēr* — the same root English wore down to **mother**, German to *Mutter*, Latin to *māter* (giving English **maternal**), and Sanskrit to **mātr̥**. Few words in any language family stay this recognisable after four thousand years; a mother is called almost the same thing across most of Eurasia because small children the world over reach for the same easy sounds.

Your turn

- *Say it:* **mādar** — mother
- *Connect:* **mādar** ← **méh₂tēr* → English **mother**, Latin **māter**, Sanskrit **mātr̥**
- *Retrieve:* **kelid-e man**, **lotfan** — my key, please
- *Name:* which four family words the بودن lesson promised, and which one this lesson delivers

Before you move on

What does مادر mean? (**Mother.**) Which lesson first named it as an English cousin, without teaching it as its own word? (**The بودن lesson**, in passing.) Which three family words does the track still owe you? (دختر, برادر, پدر.)
Source: Wiktionary: مادر.

10.2 پدر — father, mādar's oldest partner

Say مادر, and its English cousin. This lesson's word has kept the same partnership for four thousand years.

You'll want to know first — one word

پدر — *pedar* — **father**

Three letters, all already yours: پ *p*, from پرسیدن; د *d*; ر *r*.

The word, taken apart — and its English cousins

پدر continues Middle Persian **pidar**, from Indo-European **ph₂tēr* — the direct cousin of English **father**, German *Vater*, and Latin *pater* (giving English **paternal**, **patriot**). مادر and پدر are not just similar in meaning; they are built the same way, both old Indo-European kinship words carrying a shared **-ar/-tar** ending that once meant something close to “the one who [does the kin role].”

Your turn

- *Say it:* **pedar** — father
- *Connect:* **pedar** ← **ph₂tēr* → English **father**, Latin **pater**
- *Pair:* **mâdar** — **pedar**, both carrying the same old kinship ending
- *Run through:* **mâdar**, **pedar** — mother, father

Before you move on

What does پدر mean? (**Father.**) Which English word is it the direct cousin of? (**Father**, via **pater.**) What ending do مادر and پدر share? (An old kinship ending, **-ar/-tar.**)
Source: Wiktionary: پدر.

10.3 برادر — brother, the cousin that never drifted

Say پدر and مادر. One family word from the بودن lesson’s list is still owed to you, and it is the sibling one.

You’ll want to know first — one word

برادر — *barâdar* — **brother**

Five letters, all already yours: ب ر د ا ر — *b, r, long â, d, r* again. Notice ر opens and closes the word.

The word, taken apart — and its English cousins

برادر continues Middle Persian **brād(ar)**, from Indo-European **b^hréh₂tēr* — the direct cousin of English **brother**, German *Bruder*,

and Latin *frāter* (giving English **fraternal**). Unlike some kinship cousins, whose meanings narrow or shift as they travel, **brother** has meant exactly the same thing in every branch that kept it, for as long as anyone can trace it: this is as clean an inheritance as the family survives with.

Your turn

- *Say it:* **barâdar** — brother
- *Connect:* **barâdar** ← **b^hréh₂tēr* → English **brother**, Latin **frāter**
- *Run through:* **mâdar**, **pedar**, **barâdar** — mother, father, brother
- *Name:* the one word the بودن lesson still owes you

Before you move on

What does برادر mean? (**Brother**.) Which English word is it the direct cousin of? (**Brother**.) Which family word from the بودن lesson's list is still owed? (دختر, daughter.)
Source: Wiktionary: برادر.

10.4 دختر — daughter, and the family the بودن lesson promised is complete

Say برادر. Then read من اسم است ... once more, from the right edge — the very first sentence this track ever built, and the pattern this lesson reuses to close a family.

You'll want to know first — one word

دختر — *dokhtar* — daughter

Four letters, all already yours: د ر ت خ — *d, kh, t, r*.

Grammar Lens: naming a family member as your own

من دختر — *dokhtar-e man* — my daughter

The same ezafe **-e** from من اسم and من کلید links a family word to its owner exactly the way it linked a name and a request. One grammar

habit, three completely different kinds of noun.

The word, taken apart — and its English cousins

دختر continues Middle Persian **duxtar**, from Indo-European $*d^hugh_2tēr$ — the direct cousin of English **daughter** and German *Tochter*. An earlier lesson named four inherited family cousins in passing — مادر, دختر, برادر, پدر — while it was really teaching بودن. This chapter and the last have now taught all four as full lessons: a promise made early, kept three chapters later.

Your turn

- *Say it:* **dokhtar** — daughter; then **dokhtar-e man** — my daughter
- *Connect:* **dokhtar** $\leftarrow *d^hugh_2tēr \rightarrow$ English **daughter**
- *Run through:* **mâdar**, **pedar**, **barâdar**, **dokhtar** — all four, from memory
- *Retrieve:* است ... من اسم, the first sentence this track built, and its ezafe
- *Name:* which of the four family words is the odd one out in sound — دختر's **kh**, where the other three have none

Before you move on

Name all four family words this chapter and the last have taught, in order. (**Mâdar**, **pedar**, **barâdar**, **dokhtar**.) Say “my daughter.” (**Dokhtar-e man**.) Which earlier sentence used the same ezafe? (است ... من اسم, the very first sentence this track built.)
Source: Wiktionary: دختر.

Chapter 11

Eye, Hand, Foot, Tongue

Modes: ⇄ voice (4) ⇄ Hands-free start: all 4 lessons.

By the end of this chapter: I can name my eye, hand, foot, and tongue in Persian, and I can say zabân for both tongue and language — the word for the thing this whole track teaches.

The chapter and the tranche close on zabân, tongue and language together, then run a short scene built from every chapter so far: the name exchange, the wellbeing question, this chapter’s own requests and family and body words, and khodâhâfez to close.

11.1 چشم — eye, and what “how are you” was really pointing at

Say دختر. Then read *چطور شما حال است؟* once more from the right edge — an earlier lesson asked about your *حال*, your state, but never once named the parts of you that state belongs to. This chapter does.

You’ll want to know first — one word

چشم — *cheshm* — eye

Three letters, all already yours: چ *ch*, from چیست; ش *sh*, from شما; م *m*.

The word, taken apart — and its English cousins

چشم continues Middle Persian **čāšm**, tracing back through Old Iranian to the Indo-European root **spek’-*, “to look at, to observe.” English never inherited this root directly for its everyday word **eye** — that word comes from a different ancient root entirely — but it kept **spek’-* through Latin *specere*, “to look at”: **spy**, **spectacle**, **species**, **inspect**, and **suspect** are all this same root, arriving sideways rather than head-on.

Your turn

- *Say it:* **cheshm** — eye
- *Connect:* **cheshm** ← **spek’-* → Latin **specere** → English **spy**, **spectacle**, **species**
- *Retrieve:* است؟ چطور شما حال — the question this chapter’s body words could actually answer
- *Run through:* **mâdar**, **pedar**, **barâdar**, **dokhtar**, **cheshm** — five family and body words in one breath

Before you move on

What does چشم mean? (**Eye.**) Which three English words share its root, none of them meaning “eye”? (**Spy, spectacle, species.**) Which earlier question could a body-part chapter actually answer? (است؟ چطور شما حال)
Source: Wiktionary: چشم.

11.2 دست — hand, and a sound law that hides a cousin in plain sight

Say چشم (*cheshm*). This lesson’s word looks nothing like its closest Indo-Iranian relative — and that mismatch is not an accident.

You’ll want to know first — one word

دست — *dast* — hand

Three letters, all already yours: د ت س — *d, s, t*.

The word, taken apart — and its English cousins

دست continues Old Persian **dastā-**, from Indo-European **ǵ^hes-to-*, “hand.” Sanskrit’s word for hand, **hasta**, is the very same root — and so, further out, is Greek **kheír**, which English kept indirectly in **surgery** (literally “hand-work”) and **chiropractic** (“done by hand”). Old Persian’s **d**, Avestan’s **z**, and Sanskrit’s **h** look like three unrelated sounds, but they are the completely regular Indo-Iranian outcome of the same ancestral sound in each of the three branches — the kind of correspondence a false cousin never has, and a real one always does.

Your turn

- *Say it:* **dast** — hand
- *Connect:* **dast** ← **ǵ^hes-to-* → Sanskrit **hasta**, Greek **kheír** → English **surgery**, **chiropractic**
- *Contrast:* Persian **d**, Avestan **z**, Sanskrit **h** — three sounds, one regular law
- *Run through:* **cheshm**, **dast** — eye, hand

Before you move on

What does دست mean? (**Hand.**) Which Sanskrit word is its direct cousin? (**hasta.**) Which two English words trace to the same root through Greek **kheír**? (**Surgery, chiropractic.**)

Source: Wiktionary: دست.

11.3 پا — foot, the plainest cousin in the whole track

Say چشم and دست. One more body word closes this chapter, and for once its history needs no caution at all.

You’ll want to know first — one word

پا — *pâ* — foot

Two letters, both already yours: پ *p*, from پدر; long ا *â*.

The word, taken apart — and its English cousins

پا continues Old Persian **pād-**, from Indo-European **ped-/pod-*, “foot.” Unlike دست, this cousin needs no sound-law explanation to see: English **foot**, Latin **pes/pedis** (**pedal, pedestrian**), Greek **pous/podos** (**podiatry, tripod**), and Sanskrit **pāda** all sit close enough to hear the family resemblance directly. Some Indo-European cousins take a page of sound changes to prove; this one barely needs a sentence.

Your turn

- *Say it:* **pâ** — foot
- *Connect:* **pâ** ← **ped-/pod-* → English **foot**, Latin **pes**, Greek **pous**, Sanskrit **pāda**
- *Run through:* **cheshm, dast, pâ** — eye, hand, foot
- *Name:* which of this chapter’s three cousins needed a sound law, and which one did not

Before you move on

What does پا mean? (**Foot.**) Name four language families that keep a recognisable version of this word. (**English, Latin, Greek, Sanskrit.**) Which earlier body word needed a sound law to prove its cousin? (دست, hand.)
Source: Wiktionary: پا.

11.4 زبان — tongue, and language, and everything this track has built

Say چشم, دست, پا — eye, hand, foot. One organ this list has left out names something bigger than itself.

You’ll want to know first — one word, one new letter

زبان — *zabân* — tongue, and also language

Four letters, three of them already yours — ن ا ب — plus one this track has never needed before: ز *ze*, an ordinary letter from the inherited Arabic set, read simply as English *z*. ن-ا-ب-ز.

The word, taken apart — and its English cousins

زبان continues Middle Persian **zabān**, tracing to the ancient Indo-European word for “tongue.” English **tongue** is the same root, worn down at home. Latin took the same root and, by a well-documented but still debated *d-to-l* shift, turned it into *lingua* — the ancestor of English **language** and **linguistics**. Persian, like English, never split the organ from the ability: فارسی زبان *zabân-e fârsi*, “the Persian tongue,” is simply the Persian **language** — the same word this whole track has been teaching you to use.

Your turn — everything this track has taught

One short scene, built entirely from independently learned pieces, chapter by chapter:

- *Read it:* است ... من اسم — the very first sentence this track built
- *Read it:* شما against تو — the register this track built next
- *Read it:* است؟ چطور شما حال — the careful question that followed
- *Say it:* خوبم — the reply that answered it
- *Say it:* لطفاً من، کلید / لطفاً آب، — this chapter’s own requests
- *Name:* زبان پا، دست، چشم، دختر، برادر، پدر، مادر، — eight new words, three chapters
- *Read it:* خدا حافظ، and recall what it leaves unsaid — no verb, just the two halves an earlier lesson joined
- *Connect:* **zabân** ← old “tongue” word → English **tongue**, Latin *lingua* → **language**, **linguistics**

Before you move on

What does زبان mean, in both of its senses? (**Tongue**, and **language**.) Which new letter did it need? (ز, *ze*.) Which two

English words trace to the same root by a disputed sound shift?
(**Tongue** directly; **language** and **linguistics** through Latin's *d-to-l* turn.) What is فارسی زبان? (The Persian language — the one this whole track teaches.)
Source: Wiktionary: زبان.

Chapter 12

Name, Heart, Door, Book

Modes: 🗣️ voice (4) 🗣️ Hands-free start: all 4 lessons.

By the end of this chapter: I can say name, heart, door, and book in Persian, and I can tell which of the four is inherited and which is a later Arabic loan.

The chapter closes on ketâb, an Arabic loan, then runs all four words back to back — nâm, del, dar, ketâb — sorts them by vocabulary layer, and rebuilds the earlier name exchange the reappearance of nâm reopens.

12.1 نام — name, the word Persian never borrowed

Say زبان, starting on its letter ز. Then say the very first sentence this track ever built, است ... من اسم. Both words in that sentence for “name” are about to get company.

You’ll want to know first — one word

نام — *nâm* — **name**

Three letters, all already yours: ن ا م — *n*, long *â*, *m*.

The word, taken apart — and its English cousins

نام continues Old Persian **nāma**, from Indo-European **h₁nómn*, “name” — one of the most widely shared words in the whole family:

English kept it as **name**, Greek as **ónoma** (→ **onomastics**), Italian as *nome*, and Sanskrit as **nāman**. اسم *esm*, the word this track taught first, is a separate, later Arabic loan for the identical idea — so Persian now holds two words for “name,” inherited and borrowed, sitting side by side the way خوب and وقت already showed the track’s vocabulary layers working.

Your turn

- *Say it:* **nām** — name
- *Connect:* **nām** ← **h₁nómn* → English **name**, Greek **ónoma**, Sanskrit **nāman**
- *Contrast:* نام, inherited, against اسم, the Arabic loan the name-exchange lesson taught first
- *Retrieve:* زبان — tongue, and language, the word that closed the last chapter

Before you move on

What does نام mean? (**Name.**) Which other Persian word means the same thing, and which language did it arrive through? (اسم, through Arabic.) Which English word shares نام’s own root?

(**Name.**)

Source: Wiktionary: نام.

12.2 دل — heart

Say نام (*nām*), and its English cousin. This lesson’s word has an even more famous one.

You’ll want to know first — one word

دل — *del* — heart

Two letters, both already yours: د ل — *d, l*.

The word, taken apart — and its English cousins

دل continues Middle Persian **dil**, from the ancient Indo-European word for heart, **kē̌r* — the same root English wore down to **heart**, Armenian kept as **sirt**, and Sanskrit built into **hṛdaya**. Persian uses دل far beyond anatomy, the way English leans on *heart* for courage and feeling rather than only the organ — a later chapter’s word for “want” will lean on it too.

Your turn

- *Say it:* **del** — heart
- *Connect:* **del** ← **kē̌r* → English **heart**, Sanskrit **hṛdaya**, Armenian **sirt**
- *Run through:* **nām**, **del** — name, heart
- *Retrieve:* دختر — daughter, from a few lessons back

Before you move on

What does دل mean? (**Heart.**) Which English word is its direct cousin? (**Heart.**) Name one other language that kept the same root. (**Sanskrit** *hṛdaya*, or **Armenian** *sirt*.)
Source: Wiktionary: دل.

12.3 در — door

Say در, and the root it shares with **heart**. This lesson’s word shares its own root with an equally ordinary English word.

You’ll want to know first — one word

در — *dar* — **door**

Two letters, both already yours: د ر — *d, r*.

The word, taken apart — and its English cousins

در continues Old Persian **duvar-**, “door, gate,” from Indo-European **d^hwer-*. Few Indo-European words are this well attested across every

branch of the family at once: English **door**, German **Tür**, Latin **foris** (→ **foreign**, “outside the door”), Greek **thýra**, and Sanskrit **dvāra** all continue the identical ancient word. در is Persian’s contribution to a cognate set most Indo-European languages still carry.

Your turn

- *Say it:* **dar** — door
- *Connect:* **dar** ← **d^hwer-* → English **door**, German **Tür**, Latin **foris**, Sanskrit **dvāra**
- *Run through:* **nām**, **del**, **dar** — name, heart, door

Before you move on

What does در mean? (**Door.**) Name three other languages that kept the same root. (**English** *door*, **German** *Tür*, **Sanskrit** *dvāra*, among others.)

Source: Wiktionary: در.

12.4 کتاب — book, and the name exchange this chapter reopens

Say در, and the four languages that share its root. This chapter’s last word breaks that pattern completely.

You’ll want to know first — one word

کتاب — *ketâb* — **book**

Four letters, all already yours: ک ت ا ب — *k, t, long â, b*.

Grammar Lens: a possessed object, the pattern one more time

لطفاً من، کتاب. — *ketâb-e man, lotfan.* — **My book, please.**

The same ezafe **-e** from من اسم, and من کلید, and من دختر links a fourth kind of noun to its owner. Four different words, one grammar habit.

The word, taken apart — and its English cousins

کتاب is not inherited Persian at all: it is borrowed whole from Arabic **kitāb**, “book,” built on the three-consonant root ک ت ب (*k-t-b*), “to write.” Persian’s four new words this chapter show its vocabulary layers running in both directions at once — نام is inherited where اسم, taught first, is Arabic; کتاب is Arabic where Persian has no single inherited word of its own for the idea. دل and در are older still, each carrying an Indo-European root beside a whole set of English cousins.

Your turn — the chapter, then the name exchange it reopens

- *Say it:* **ketâb** — book; then **ketâb-e man, lotfan** — my book, please
- *Run through:* **nâm, del, dar, ketâb** — all four of this chapter’s words
- *Sort:* which words are inherited, and which one is Arabic
- *Rebuild:* شما / تو — the register choice; چیست؟ شما اسم — the question, joining *chi* and *ast*; خوشوقتم — the reply that closes an introduction
- *Connect:* نام, this chapter’s own name-word, back to the exchange that first taught اسم
- *Retrieve:* پا — foot, one more body word from a few lessons back

Before you move on

Which language did Persian borrow کتاب from? (**Arabic.**) Say “my book, please.” (**Ketâb-e man, lotfan.**) Which of this chapter’s four words is inherited Persian, and which is the Arabic loan? (نام, دل, در inherited; کتاب Arabic.) Which earlier word for “name” does نام now stand beside? (اسم.)
Source: Wiktionary: کتاب.

Chapter 13

Sky, Sun, Moon, Star, Rain

Modes: ⇄ voice (5) ⇄ Hands-free start: all 5 lessons.

By the end of this chapter: I can name the sky, sun, moon, star, and rain in Persian, and I can say which of those words has no established English cousin.

The chapter closes on bârân, a word with no English cousin, then runs all five sky words back to back and rebuilds the careful wellbeing question the weather now follows in ordinary small talk.

13.1 آسمان — sky

Say کتاب (*ketâb*), and which language it came from. This chapter turns from things in the house to the world above it, starting with the biggest word of all.

You'll want to know first — one word

آسمان — âsemân — sky

Five letters, all already yours: آ م س ن — alef with *madde*, *s*, *m*, long *â*, *n*.

The word, taken apart — and its English cousins

آسمان continues Old Persian **asmānam**, from Indo-European **h₂ék^mō*, “stone.” Sanskrit kept the plain sense as **aśman**, “stone,” while Avestan’s cousin word already carried both meanings, “stone” and “sky,” at once. Picturing the sky as a stone dome overhead was a

widespread Indo-European habit, not a Persian invention — one old word doing two jobs, the way زبان later did for tongue and language.

Your turn

- *Say it:* âsemân — sky
- *Connect:* âsemân ← *h₂ék̑mō → Sanskrit **aśman**, “stone”
- *Name:* the old Indo-European habit آسمان preserves — picturing the sky as stone
- *Retrieve:* زبان — tongue and language, with its letter ز

Before you move on

What does آسمان mean? (**Sky**.) What did its root originally mean, and which Sanskrit word still keeps that older sense? (**Stone**; **aśman**.)

Source: Wiktionary: آسمان.

13.2 خورشید — sun, a word built from two old pieces

Say آسمان (*âsemân*), and the root sense it once carried. Look up, and this lesson names what is in it.

You’ll want to know first — one word

خورشید — *khorshid* — **sun**

Six letters, all already yours: خ و د ی ش ر — *kh*, *o* carrying its learned *o* value, *r*, *sh*, long *i*, *d*.

The word, taken apart — and its English cousins

خورشید is a compound, not a single old root. Its first half, خور *khōr*, “sun,” descends from the ancient Indo-European word for the sun, *s₂h₂₂wl — the same distant root behind English **sun**, Latin **sol** (→ **solar**), Greek **hēlios** (→ **heliotrope**), and Sanskrit **sūrya**, though it reached Persian by a completely different branch of the family. Its

second half, شید *shid*, “shining,” is an unrelated word that Avestan had already paired with خور long before Persian existed.

Your turn

- *Say it:* **khorshid** — sun
- *Split:* خور, sun — شید, shining
- *Connect:* خور ← **sóh₂wl* → English **sun**, Latin **sol**, Greek **hēlios**, Sanskrit **sūrya**
- *Run through:* âsemân, **khorshid** — sky, sun

Before you move on

What does خورشید mean, and what are its two parts? (**Sun**; خور “sun” plus شید “shining.”) Which English word shares خور’s distant root? (**Sun**.)

Source: Wiktionary: خورشید.

13.3 ماه — moon, and month

Say خورشید (*khorshid*), and the two old pieces fused inside it. The sky’s other light gives Persian one more word doing double duty.

You’ll want to know first — one word

ماه — *mâh* — **moon**, and also **month**

Three letters, all already yours: م ا ه — *m*, long *â*, *h*.

The word, taken apart — and its English cousins

ماه continues Old Persian **māha-**, from Indo-European **mēh₁ns*, “moon.” The same root split into two related English words, **moon** and **month** — a month was, for most of human history, one full cycle of the moon — and Persian’s single word still holds both senses together, the way زبان later holds “tongue” and “language” in one word. Latin kept the root as **mensis** (→ **month**, **menstrual**), Greek

as **mēn**, and Sanskrit as **māsa**.

Your turn

- *Say it:* **mâh** — moon, and month
- *Connect:* **mâh** ← **mēh₁ns* → English **moon** and **month**, Latin **mensis**, Sanskrit **māsa**
- *Run through:* âsemân, khorshid, **mâh** — sky, sun, moon

Before you move on

What two English words does ماه's root split into? (**Moon** and **month**.) Which earlier Persian word did the same double duty for tongue and language? (زبان.)
Source: Wiktionary: ماه.

13.4 ستاره — star

Say ماه, and the two English words its root split into. One more light in the sky, and a new small spelling habit.

You'll want to know first — one word, one small spelling habit

ستاره — *setâre* — **star**

Five letters, all already yours: ه ر ا ت س — *s, t, long â, r*, and a final ه read as the vowel *-e* rather than as a consonant — the first time this track has met ه doing that particular job.

The word, taken apart — and its English cousins

ستاره continues Old Persian **star-**, from Indo-European **h₂stér*, “star.” Few Indo-European roots survive this cleanly across the whole family: English **star**, Latin **stella** (→ **stellar**, **constellation**), Greek **astron** (→ **astronomy**, **disaster** — “ill-starred”), and Persian's own ستاره all continue the identical ancient word, alongside در's door and ماه's moon as the tranche's clearest cousins.

Your turn

- *Say it:* **setâre** — star
- *Connect:* **setâre** ← **h₂stér* → English **star**, Latin **stella**, Greek **astron**
- *Read it:* the final ه in ستاره as -e, not as a consonant
- *Run through:* âsemân, khorshid, mâh, **setâre** — sky, sun, moon, star
- *Retrieve:* در — door, and its own well-attested cousin set

Before you move on

What does ستاره mean? (**Star.**) How is its final ه read? (As the vowel -e, not a consonant.) Name two other languages whose word for star shares the same root. (**English** *star*, **Latin** *stella*, or **Greek** *astron*.)

Source: Wiktionary: ستاره.

13.5 باران — rain, and the wellbeing question this chapter answers differently

Say ستاره (*setâre*), and its root's three attested cousins. Not every sky word gets to keep company like that.

You'll want to know first — one word

باران — *bârân* — **rain**

Five letters, all already yours: ب ا ر ا ن — *b*, long *â*, *r*, long *â*, *n*.

The word, taken apart — and its English cousins

باران continues Middle Persian **wārān**, from Indo-Iranian **wáHr*, “water, rain,” itself from Indo-European **weh₁r-*, “water.” Its cousins stayed close to home: Avestan **vāra**, “rain,” and Sanskrit **vār**, “water,” share the identical root. English **rain** is not part of this family at all — its own origin is disputed and confined to the Germanic languages, with no secure Indo-European cousin beyond them — so, as with رفتن

and گفتن far earlier, the honest answer here is that no English cousin is claimed.

Grammar Lens: what small talk about the sky follows

Weather small talk in Persian commonly follows the wellbeing exchange, the same slot English fills right after “how are you?” Rebuild the question: است؟ چطور شما حال, careful **ast**, not a contraction, then its reply, ممنون خوبم — a shape a sky word can now attach to.

Your turn — every sky word, then the exchange it follows

- *Say it:* **bârân** — rain
- *Connect:* **bârân** ← **weh₁r-* → Sanskrit **vār**, Avestan **vāra** — no English cousin
- *Run through:* **âsemân**, **khoshid**, **mâh**, **setâre**, **bârân** — all five sky words
- *Rebuild:* است؟ چطور شما حال and its reply, ممنون خوبم

Before you move on

What does باران mean? (**Rain.**) Does it share a root with English **rain**? (**No.**) Which two Indo-Iranian languages keep the closest cousins? (**Avestan, Sanskrit.**) Name all five sky words. (**Âsemân, khoshid, mâh, setâre, bârân.**)
Source: Wiktionary: باران.

Chapter 14

Sister, Son, Man, Woman, Friend

Modes: 🗣️ voice (5) 🗣️ Hands-free start: all 5 lessons.

By the end of this chapter: I can name my sister, son, and friend in Persian, tell man and woman apart, and open and close a short interaction with all of them.

The chapter and the tranche close on dust, friend, then run all five people-words back to back and rebuild a complete short interaction with a friend: a polite request for tea, a request for a key, and the standard farewell both voices share.

14.1 خواهر — sister, the family word the earlier tranche skipped

Say باران, and whether it has an English cousin. The sky words are done; the family the earlier tranche built — پدر, مادر, برادر, دختر — is missing exactly one member.

You'll want to know first — one word, a familiar silent letter

خواهر — *khâhar* — sister

Five letters, all already yours: ر ه ا و خ. The و here is silent, exactly the pattern خواندن taught: written after خ and before ل, never pronounced. Read it **kh-â-har**.

The word, taken apart — and its English cousins

خواهر continues Middle Persian **xwāhar**, from Indo-European **swésōr*, “sister” — as secure a cognate as برادر’s own **b^hréh₂tēr*. English kept it as **sister** (through Old Norse, replacing the native Old English form), Latin as **soror** (→ **sorority**), and Sanskrit as **svasṛ**. برادر, پدر, مادر, خواهر دختر now give the track all five of Indo-European’s plainest kinship words.

Your turn

- *Say it:* **khâhar** — sister
- *Connect:* **khâhar** ← **swésōr* → English **sister**, Latin **soror**, Sanskrit **svasṛ**
- *Read it:* the silent و in خواهر, the same pattern خواندن taught
- *Name:* all five family words this track now holds — برادر, پدر, مادر, خواهر دختر
- *Retrieve:* کتاب — book, from a few lessons back

Before you move on

What does خواهر mean? (**Sister.**) Which letter in it is silent, and which earlier word taught the same pattern? (خواندن; و) Which English word is its direct cousin? (**Sister.**)
Source: Wiktionary: خواهر.

14.2 پسر — son, دختر’s missing counterpart

Say خواهر, and its secure English cousin. Then say برادر — its own family tranche taught دختر, “daughter,” but never gave her brother’s counterpart a lesson of its own, until now.

You’ll want to know first — one word

پسر — *pesar* — **son**

Three letters, all already yours: پ — *pe*, from پرسیدن, then *s*, *r*.

The word, taken apart — and its English cousins

پسر continues Old Persian **puça**, cognate with Sanskrit **putra**, “son” — an Indo-Iranian word Persian and Sanskrit still share with each other. English **son** is not part of this family: it descends from an entirely different Indo-European root, so — as with باران and رفتن before it — no English cousin is claimed here. پسر and دختر now give the track a complete pair for “son” and “daughter,” even though only one of the two has an English relative.

Your turn

- *Say it:* **pesar** — son
- *Connect:* **pesar** ← Old Persian **puça** → Sanskrit **putra** — no English cousin
- *Run through:* **barâdar**, **pesar** — brother, son — the two words this pair now completes
- *Run through:* **khâhar**, **pesar** — sister, son

Before you move on

What does پسر mean? (**Son.**) Which Sanskrit word is its direct cousin? (**Putra.**) Does English **son** share the same root? (**No.**)
Source: Wiktionary: پسر.

14.3 مرد — man, but its root says “mortal”

Say پسر (*pesar*), and the Sanskrit word it shares a root with.
This lesson’s word looks like it should be an easy English cousin.
It is not.

You’ll want to know first — one word

مرد — *mard* — **man**

Three letters, all already yours: د ر م — *m, r, d.*

The word, taken apart — and its English cousins

مرد continues Middle Persian **mard**, from Indo-European **mer-*, “to die.” Its literal sense is not “man” at all — it is “mortal,” “one who dies.” The same root gives Latin **mortuus**, “dead” (→ English **mortal**, **mortician**), Greek **brotós** (→ **ambrosia**, “not mortal”), and Sanskrit **martya**. English **man** looks like an obvious match for مرد and is not one — it descends from a completely different root — so this is one place where guessing a cousin from sound alone would mislead rather than help.

Your turn

- *Say it:* **mard** — man
- *Connect:* **mard** ← **mer-* → Latin **mortuus**, **mortal**; Greek **brotós**; Sanskrit **martya** — not English **man**
- *Run through:* **pesar**, **mard** — son, man

Before you move on

What does مرد mean? (**Man.**) What does its root literally mean, and which English word keeps that sense? (**Mortal; mortal** itself.) Does English **man** share the same root? (**No — a false friend.**) Source: Wiktionary: مرد.

14.4 زن — woman, a root hiding behind a royal title

Say مرد, and why it is not a cousin of English **man**. This lesson’s word finds its English cousin in an unexpected place.

You’ll want to know first — one word

زن — *zan* — **woman**

Two letters, both already yours: ز ن — ز *ze*, from زبان, then *n*.

The word, taken apart — and its English cousins

زن continues Middle Persian **zan**, from Indo-European $*g^w\acute{e}n(h_2)-$, “woman.” English kept the same root, but only inside a narrowed, elevated word: **queen** was once simply “woman,” the way مرد narrowed “mortal” down to “man.” Greek kept the plain sense directly as **gynē** (→ **gynecology**), and Russian as **žena**. مرد and زن give the track its first pair of person words that are not family roles.

Your turn

- *Say it:* **zan** — woman
- *Connect:* **zan** ← $*g^w\acute{e}n(h_2)-$ → English **queen**, Greek **gynē**
- *Run through:* **mard**, **zan** — man, woman
- *Contrast:* مرد narrowed from “mortal”; زن widened English’s cousin down to royalty alone
- *Retrieve:* ستاره — star, one more well-attested cousin

Before you move on

What does زن mean? (**Woman.**) Which English word is its cousin, and what did that word originally mean before it narrowed? (**Queen**; simply “woman.”) Which Greek word shares the same root? (**Gynē.**)
Source: Wiktionary: زن.

14.5 دوست — friend, and everything this tranche has built

Say زن مرد, (*mard, zan*) — man, woman. One more person word closes the tranche, and it is a word this track has half-taught already.

You’ll want to know first — one word, already half-known

دوست — *dust* — friend

Four letters, all already yours: د ت س و — *d*, long *u*, *s*, *t*. The compound verb for “to love” already ran on this exact word; here it stands alone, as the person it names.

The word, taken apart — and its English cousins

دوست goes back through Old Persian **dauštā** to Indo-European **ǵews-*, “to taste, to choose” — a friend is *the one chosen*. English inherited the root directly as **choose**; Latin took it as **gustus**, “taste,” giving English **gusto** and **disgust**. The compound-verb lesson that first taught this root only ever used دوست glued to داشتن; this is its first lesson as a free-standing noun.

Your turn — the tranche, start to finish

One short scene, built entirely from independently learned pieces:

- *Say it:* **dust** — friend; then **khâhar, pesar, mard, zan, dust** — all five people-words this closing chapter taught
- *Connect:* **dust** ← **ǵews-* → English **choose**, Latin **gustus**
- *Say it:* لطفاً چای، — offer your friend tea in the **bârân**, rain, reusing the very first polite request this track built
- *Say it:* لطفاً من، کلید — and ask a friend to pass your key
- *Read it:* حافظ — guardian, protector — the Arabic-rooted half of a farewell you have used since your very first complete exchange
- *Read it:* joined خداحافظ, and recall what it leaves unsaid — no verb, just two halves fused into one wish
- *Run through:* ... خداحافظ ... ممنون خوبم، ... است؟ چطور شما حال! سلام. خداحافظ. — the exact four-line interaction a friend opens and closes

Before you move on

What does دوست mean on its own? (**Friend.**) Which compound verb already ran on this exact word? (**Dust dâshtan**, “to love.”) Name all five people-words this closing chapter taught, in order. (**Khâhar, pesar, mard, zan, dust.**) How does a friend close the four-line interaction? (خداحافظ, said by both voices.)

Source: Wiktionary: دوست.

Chapter 15

Nine Letters, and the Words You Already Knew

Modes: 👁 eyes (1) ✍ pen (9) ⇄ Hands-free start: none of the 10 lessons.

By the end of this chapter: I can write nine Perso-Arabic letters from memory, read *salâm*, *bale*, *na*, *mamnun*, *nân*, *nâm* and *mâh* off the page rather than from the romanization, and explain why Persian leaves its short vowels unwritten.

Seven words the book had only ever given by ear, read letter by letter from the right – and the reason a Persian word can be read only once you have heard it.

15.1 | — one stroke, and the direction of the page

Return to the right-to-left direction and the one alef stroke you first copied beside *salâm*. Now make both durable before adding a second letter.

Script — first, which way the page runs

English marches **left to right**. Persian marches **right to left**.

Your pen starts at the **right edge** of a word and travels **towards the left**. So in a Persian word the letter you meet **first** is the **rightmost** one, and the letter you meet **last** is the leftmost — the exact reverse of what your eye has been trained on for your whole reading life.

This takes a few minutes to stop feeling strange and then stops mattering entirely. Numbers, incidentally, still run left to right, which surprises people more than the letters do.

Script — the letter itself

l

One downstroke. That is the whole letter, and there is nothing in the alphabet simpler. Draw it from the top down, straight, and lift.

Its name is **alef**. What it *sounds* like is a longer story than what it looks like, and this book will take that slowly: for now, treat alef as the letter that carries a long â, the vowel in English *father*.

Your turn

- *Write it:* l — one stroke, top to bottom
- *Say it:* â, the vowel of *father*
- *Point to:* at the right edge of a Persian word, where your pen would begin

Before you move on

How many strokes in alef? (**One.**)

15.2 ج — alef, with a bowl at its foot

Write l. One stroke, top to bottom.

Script — the shape

ج

Start exactly as you started alef — a tall stroke coming down — and then, instead of lifting, **swing left into a shallow bowl** at the foot and come back up a little.

One movement, no pen lift. If you can write l you are most of the way to ج already; the difference is what happens at the bottom.

Its name is **lâm** and it says l, as in English *long*.

Your turn

- *Write it:* l, then ج — the same descent, and then the bowl
- *Say it:* l

Before you move on

Do you lift the pen between the stroke and the bowl? (**No** — one movement.)

15.3 س — three teeth, then a bowl

Write ل. Descent, then bowl.

Script — the shape

س

Three small **teeth** — short upward points in a row — and then the line drops into a **bowl** and comes back up, the same kind of bowl you drew on lâm.

Remember you are working **right to left**: the first tooth you draw is the **rightmost** one.

All of it is one movement. No lifts at all.

Its name is **sin** and it says **s**, as in English *see*.

Your turn

- *Write it:* س — three teeth from the right, then the bowl, without lifting
- *Say it:* s

Before you move on

Which tooth do you draw first? (The **rightmost**.)

15.4 م — a loop, and a tail below the line

Write س. Three teeth, then the bowl.

Script — the shape

م

A small **closed loop** sitting on the line, and from it a **tail** dropping straight down **below** the line.

The loop is small and round; keep it tight, or it starts to look like other letters you will meet later. The tail is what makes mim unmistakable standing on its own — very few letters drop below the line, and your eye will learn to use that. Joined into the middle of a word the tail is trimmed away and the loop is what survives, which is the same trimming you will meet everywhere.

One movement, no lift.

Its name is **mim** and it says **m**.

Your turn

- *Write it:* م — the small loop, then the tail dropping below the line
- *Say it:* **m**

Before you move on

Is the loop open or closed? (**Closed.**)

15.5 Letters that hold hands, and two that will not

Write س, then م. Four letters are now yours.

Script — the running line

Persian is not written as separate letters sitting side by side. Letters **join**, running into one another along a single line, the way English cursive does — except that in Persian it is not a style. It is the ordinary way to write, and printed text does it too.

Because they join, most letters **change shape** depending on where they sit: a letter at the start of a joined run, one in the middle, one at the end, and one standing alone can all look different. They are the same letter.

That sounds like four times the work. It is not, and here is why: the changes are almost always **the same trimming**. A letter's identifying part stays, and the finishing flourish is cut short so the next letter can begin.

Look at sin, which you can already write:

alone: س — in the middle of a run: س

The three teeth survive. The bowl is what gets trimmed away.

Script — and the letters that refuse

Now the rule that saves you the most trouble.

A few letters join to the letter before them, but never to the letter after. They connect on the right, and refuse on the left, so the run **breaks** and the next letter starts fresh as though beginning a new word.

alef is one of them. So when you meet a gap in the middle of a Persian word, it is very often not a gap at all — it is one of these non-joining letters doing exactly what it always does.

That single fact turns a page of Persian from an unbroken puzzle into something with visible seams.

What you've built

Four letters, and they spell a word you have been saying since the very first lesson:

سلام

Read it right to left: س *s*, ل *l*, ا *â*, م *m*. Say it: **salâm**.

Two things to notice. The short vowel between *s* and *l* is **not written** — Persian normally prints only the long vowels, and readers supply the rest. And the break before the final م is alef refusing to join, exactly as promised.

Your turn

- *Read it:* سلام — name each letter from the right, then say the word
- *Write it:* سلام — and let the run break after alef
- *Say it:* **salâm**

Before you move on

Which part of *sin* survives when it joins? (The **teeth**; the bowl is trimmed.)

15.6 ب — a bowl, and one dot underneath

Write سلام. Four letters, one break.

Script — the shape

ب

A single shallow **bowl**, wider and flatter than the one on *lâm*, sitting on the line — and **one dot below it**.

Draw the bowl first, then lift and place the dot. That lift is the only one.

Its name is **be** and it says **b**.

Now the part worth more than the letter. **This bowl is a skeleton that several letters share.** On its own it means nothing; the **dots** decide which letter it is — how many, and whether they sit above or below.

That is why dots in Persian are not decoration and not optional. Move one dot from below to above and you have written a different letter. Your eye has to learn to look at the dots as hard as it looks at the shape.

Your turn

- *Write it:* ب — the shallow bowl, then one dot beneath it
- *Say it:* **b**

Before you move on

Is the bowl alone enough to identify a letter? (**No** — the dots decide.)

15.7 ت and ن — the same bowl, dotted differently

Write ب. Bowl, then one dot below.

Script — two dots above

ت

The same bowl as be. Two dots, and they sit **above** it.

That is the entire difference, and it is a whole different letter: **te**, saying **t**.

Script — one dot above, and a deeper bowl

ن

One dot above — and a bowl that is noticeably **deeper and rounder** than be's, curving well below the line before coming back up.

Its name is **nun** and it says **n**.

Standing alone, nun's deeper bowl helps you. In the middle of a joined run the bowl gets trimmed like everyone else's, and then the dot is doing nearly all the work: **one above** is nun, **two above** is te, **one below** is be.

What you've built

Three letters, one shape:

ب — one dot **below**

>

ت — two dots **above**

>

ن — one dot **above**

You learned one bowl and got three letters out of it. That is the trade Persian keeps offering: fewer shapes than you feared, and dots you cannot afford to skim.

Your turn

- *Write it:* ب, then ت, then ن — same hand movement, different dots
- *Say it:* **b**, **t**, **n**

Before you move on

Which of the three has the deepest bowl? (**nun.**)

15.8 ه — the letter with four costumes

Write ت, then ن. Same bowl, different dots.

Script — the shape

ه

A small **round** letter, standing on the line, no dots at all.

Its name is **he**. It says **h** at the start of a word — and at the **end** of a word it usually says nothing like an h: it carries a final **e** sound, the vowel that ends so many Persian words.

This letter will test what you learned about joining, because its four forms differ more than most:

alone: ه — at the start: ه — in the middle: ه — at the end: ه

Do not try to memorise four shapes. Recognise the **round body**, notice where in the run it is sitting, and let the shape follow from that. Persian readers are not holding four pictures in mind either.

Your turn

- *Write it:* ه — small and round, no dots
- *Say it:* **h** at the front of a word; a soft **e** at the end of one

Before you move on

Does he carry any dots? (**None.**)

15.9 و — one shape, three jobs, and no hand offered to the left

Write و. Small, round, no dots.

Script — the shape

9

A small **loop** at the top with a **tail** sweeping down and to the left, below the line. One movement.

Its name is **vâv**, and it is unusually hard-working. Depending on the word it is:

- the consonant **v**
- the long vowel **u**, as in English *food*
- the vowel **o**

You cannot tell which from the letter alone. You learn it with the word — and that is a fair trade, because it means Persian needs no separate letters for those vowels at all.

And vâv is a non-joiner, the second one this chapter has given you. Like alef, it takes the hand of the letter on its right and offers nothing to the left, so the run breaks after it.

Your turn

- *Write it:* 9 — the small loop, then the tail below the line
- *Say it:* **v**, then **u**, then **o** — one letter, three jobs

Before you move on

Can you tell from the shape alone whether vâv is v, u or o? (**No** — the word tells you.)

15.10 Practice — seven words you already knew, now read

Write your nine letters in a row, right to left, saying each name as you go.

Script — the words come back

Nothing new is taught here. Every word below is one this book already gave you to say, and every letter in them is one you can now write.

Read each from the right, naming its letters before you say it:

سلام

>

بله

>

نه

>

ممنون

>

نان

>

نام

>

ماه

salâm — bale — na — mamnun — nân — nâm — mâh.

Seven words. Nine letters. That ratio is the point: a small closed set of shapes unlocks far more than its own size, and it keeps doing so as the set grows.

Why it's said this way

Count the letters in **بله** and count the sounds in *bale*. Three letters, four sounds.

Persian normally does not write its short vowels. The long ones get letters — that is part of what alef and vâv are for — but the short

a, *e* and *o* are left off the page, and the reader supplies them.

This sounds alarming and is not, for the same reason English readers cope with *read* and *read*: you are not decoding letter by letter for long. You recognise the word.

It does mean one thing, though, and it is worth accepting early. **You cannot reliably sound out a Persian word you have never heard.** Reading and listening have to grow together in this language, more tightly than in one that spells every vowel. That is why this book taught you these seven words by ear first, and is only now handing you the page.

What you've built this chapter

Nine letters, and three ideas that matter more than any of them:

- **the page runs right to left**, and your pen starts at the right edge
- **letters join**, changing shape by position — but the change is a trimming, not a new letter, and **alef and vâv refuse to join to the left**, which is what makes the gaps inside a word
- **dots carry the identity** — one bowl gave you ب, ت and ن

Nine of Persian's thirty-two letters. The remaining twenty-three are mostly more of what you have just done: familiar skeletons, re-dotted.

Your turn

- *Read it*: ممنون نه به سلام — name the letters of each before saying it
- *Write it*: نان and نام — one letter apart, and check which
- *Say it*: **mamnun**, and count how many letters are written for it

Before you move on

Which two of your nine letters refuse to join to the left? (ا and و.)

Pronunciation & Script Reference

A **reference**, not a chapter. Look up a sound when a lesson names it; do not memorize this page first. The lessons introduce Persian script inside language the learner can already understand, one word-sized pattern at a time.

This track uses a learner romanization: **â** marks long *a*; **u** marks the long vowel in *mamnun*. Romanization is temporary scaffolding. Train your eye on the Persian form and gradually cover the Latin line.

The script in three facts

1. **Read right to left (rtl)**. Words and sentences begin at the right edge.
2. **Most letters join**, and their shape responds to position. Some letters do not connect leftward to the next letter. In سلام, ل creates the visible break before final م.
3. **Short vowels are normally unwritten** (**short-vowels-unwritten**). Learn the vowel pattern with the word. The long vowels are represented with ا *â*, و *u*, and ی *i*.

Persian has no uppercase/lowercase distinction. Its alphabet adds پ *p*, چ *ch*, ژ *zh*, and گ *g* to the inherited Arabic inventory; the lessons will introduce them only when a useful word needs them.

Sound ids used by the starter lessons

- **Sound id: rtl**
What to do: start at the right edge and follow the word leftward
First anchor: سلام *salâm*

- **Sound id: long-a**
What to do: hold ا as a steady *â*, near the vowel in “father”
First anchor: سلام *salâm*
- **Sound id: long-u**
What to do: hold و as *u*, near “oo” in “food,” without an English off-glide
First anchor: ممنون *mamnun*
- **Sound id: long-i**
What to do: hold ی as long *i* in the learned word
First anchor: چیست *chist*
- **Sound id: short-vowels-unwritten**
What to do: supply learned *a*, *e*, or *o* even when no separate vowel letter appears
First anchor: به *bale*, نه *na*
- **Sound id: ezafe-e**
What to do: say a light linking *-e* after a noun before its owner or description; ordinary text often leaves it unmarked
First anchor: من اسم *esm-e man*
- **Sound id: sh**
What to do: read three-dotted ش as *sh*
First anchor: شما *shomâ*
- **Sound id: persian-che**
What to do: read Persian چ as *ch*
First anchor: چیست *chist*
- **Sound id: kh**
What to do: make خ farther back than English *h*; a gentle approximation is acceptable first
First anchor: خوب *khub*
- **Sound id: gh**
What to do: use the modern Iranian Persian voiced back-of-the-mouth sound for غ
First anchor: خوشوقتم *khoshvaghtam*
- **Sound id: vav-o**
What to do: let و carry the learned *o* value in this word
First anchor: چطور *chetor*

- **Sound id:** persian-question-mark
What to do: recognize ؟ at the left end of a right-to-left question
First anchor: چیست؟ شما اسم
- **Sound id:** alef-madde
What to do: read آ — alef under a wavy *madde* — as a word-initial long *â*
First anchor: آمدن *âmadan*
- **Sound id:** persian-gaf
What to do: read گ *gâf* as English *g* in “go”; it is a Persian addition to the Arabic set
First anchor: گفتن *goftan*
- **Sound id:** persian-pe
What to do: read پ *pe* as English *p*; a ب shape with three dots beneath, and the third of Persian’s four additions
First anchor: پرسیدن *porsidan*
- **Sound id:** silent-vav
What to do: after خ and before ل, leave و unpronounced — it is written, never said
First anchor: خواندن *khândan*
- **Sound id:** ze
What to do: read ز as English *z*; an ordinary letter from the inherited Arabic set
First anchor: زبان *zabân*
- **Sound id:** heh-e
What to do: read a word-final ه as the vowel *-e*, not as a consonant
First anchor: ستاره *setâre*

Read the current word before the whole alphabet

- سلام gives م ا ل س, right-to-left direction, joining, and long *â*.
- ممنون reuses م, adds و ن, and assigns و its long-*u* job in this word.
- به and نه make the missing short vowels visible by contrast: the spelling supplies a consonantal frame; the learned word supplies *a/e*.
- من اسم است ... recombines familiar letters and adds one spoken grammar cue, ezafe *-e*. The cue is often heard but not printed.

- شما, چیست, and خوشوقتم add *sh*, Persian چ, and the back sounds in خ/غ only inside the name exchange.
- چطور است؟ چطور شما حال reuses ezafe and the Persian question mark; چطور gives و its learned *o* value, while خوبم returns to long-*u*.
- خدا reuses خ and long-*â* ا; حافظ adds a clear initial *h* and a final ظ pronounced *z* in modern Persian. The complete farewell is normally joined in Persian as خداحافظ.
- رفتن, بودن, and دانستن need no new letters at all; the verb chapter adds only آ (alef wearing a *madde*, for a word opening on long *â*) inside آمدن, and گ *gâf* inside گفتن — the second of the four Persian additions گ ژ چ پ the learner has now met.
- The requests, family, and body chapters need only one new letter across all twelve words: ز *ze*, an ordinary member of the inherited Arabic set, inside زبان *zabân*. Every other word in those three chapters — آب, نان, آب, چای, نان, کلید, مادر, پدر, برادر, دختر, چشم, دست, پا — reuses letters already met.
- The next fourteen words — نام, دل, در, کتاب, آسمان, خورشید, ماه, ستاره, ستاره, ماه, خورشید, آسمان, کتاب, در, دل, نام — need no new letters at all, only one new habit: ستاره's final ه carries the vowel *-e* rather than a consonant, the sound id *heh-e*.

One spelling symbol can do more than one job in later words—especially و and ی—so read from the word and context rather than assigning each shape one English value forever.

Glossary

This glossary collects every word and phrase taught in the book. Pronunciation appears when it differs from the written form; chapter numbers show where each entry is introduced.

آب *âb*

water — and Persian’s first “please”

Introduced in Chapter 9.

آمدن *âmadan*

to come — with the hat-wearing alef and a root English kept as *come*

Introduced in Chapter 6.

آسمان *âsemân*

sky

Introduced in Chapter 13.

بله *bale*

yes

Introduced in Chapter 1.

برادر *barâdar*

brother — the third of Chapter 6’s promised cousins

Introduced in Chapter 10.

باران *bârân*

rain — the chapter’s payoff, and a sky word with no English cousin

Introduced in Chapter 13.

بودن *budan*

to be — and the ending every Persian verb wears

Introduced in Chapter 6.

چای *chây*

tea — Persian’s own leg of the overland road from Chinese

Introduced in Chapter 9.

چشم *cheshm*

eye — the body part behind the family a doctor’s question would ask about

Introduced in Chapter 11.

چطور *chetor*

how; in what manner
Introduced in Chapter 4.

چیست *chist*

what is?
Introduced in Chapter 3.

دانستن *dânestan*

to know — the chapter's clearest cousin, and the place all five pairs come back
Introduced in Chapter 6.

در *dar*

door
Introduced in Chapter 12.

دست *dast*

hand — a regular sound law hiding behind three different-looking Indo-Iranian words
Introduced in Chapter 11.

دل *del*

heart
Introduced in Chapter 12.

دختر *dokhtar*

daughter — Chapter 6's last promised cousin, and the family closes
Introduced in Chapter 10.

دوست *dust*

friend — the standalone noun, and the closing word of this whole tranche
Introduced in Chapter 14.

داشتن دوست *dust dâshtan*

to like, to love — “to have as friend,” and the place all thirteen verbs run together
Introduced in Chapter 8.

من اسم است ... *esm-e man ... ast*

my name is ...
Introduced in Chapter 2.

چیست؟ شما اسم *esm-e shomâ chist?*

What is your name? (respectful)
Introduced in Chapter 3.

فهمیدن *fahmidan*

to understand — and the one Persian verb class whose stem you can predict
Introduced in Chapter 7.

کردن فکر *fekr kardan*

to think — two words bolted into one verb, and the pattern that builds hundreds more
Introduced in Chapter 7.

گرفتن *gereftan*

to take — and the clearest English cousin in this book
Introduced in Chapter 8.

گفتن *goftan*

to say — and the Persian-only letter گ that starts it
Introduced in Chapter 6.

حافظ *hâfez*

guardian, protector — the Arabic-rooted half of the farewell
Introduced in Chapter 5.

حال *hâl*

state, condition — the state in “How are you?”
Introduced in Chapter 4.

چطور شما حال است؟ *hâl-e shomâ chetor ast?*

How are you? (careful, respectful)
Introduced in Chapter 4.

کلید *kelid*

key — a Greek word Persian has held since Alexander, and the chapter’s payoff
Introduced in Chapter 9.

کتاب *ketâb*

book — an Arabic loan, and the chapter’s payoff
Introduced in Chapter 12.

خواهر *khâhar*

sister — the family word the earlier family tranche left out
Introduced in Chapter 14.

خواندن *khândan*

to read — and to recite, and to sing, because all three are sounding
Introduced in Chapter 7.

خدا *khodâ*

God — the inherited Persian half of the standard farewell
Introduced in Chapter 5.

خداحافظ *khodâ hâfez*

goodbye — the standard Persian farewell
Introduced in Chapter 5.

خورشید *khorshid*

sun — one root and a second, unrelated one, fused into a single word
Introduced in Chapter 13.

خوشوقتم *khoshvaghtam*

pleased to meet you
Introduced in Chapter 3.

خوب *khub*

good, well
Introduced in Chapter 4.

ممنون خوبم، *khubam, mamnun*

I am well, thank you

Introduced in Chapter 4.

کردن کمک *komak kardan*

to help — the compound pattern proving itself, and a third layer in the vocabulary

Introduced in Chapter 8.

مادر *mâdar*

mother — a word Chapter 6 already named as an English cousin, now taught in full

Introduced in Chapter 10.

ماه *mâh*

moon, and month — one old word doing two jobs, like زبان before it

Introduced in Chapter 13.

ممنون *mamnun*

thank you / grateful

Introduced in Chapter 1.

مرد *mard*

man — not English “man,” but “mortal”

Introduced in Chapter 14.

نه *na*

no

Introduced in Chapter 1.

نام *nâm*

name — Persian’s own inherited word, beside the Arabic اسم already learned

Introduced in Chapter 12.

نان *nân*

bread — a word this track cannot trace, and English quietly borrowed anyway

Introduced in Chapter 9.

نوشتن *neveshtan*

to write — the chapter’s last pair, and the place all four run together

Introduced in Chapter 7.

پا *pâ*

foot — the corpus’s most secure cognate, unmarked by any sound-law puzzle

Introduced in Chapter 11.

پدر *pedar*

father — the second cousin Chapter 6 named in passing

Introduced in Chapter 10.

پسر *pesar*

son — دختر’s counterpart, an Indo-Iranian cousin with no English relative

Introduced in Chapter 14.

پرسیدن *porsidan*

to ask — the verb behind a question you have been asking since Chapter 3
Introduced in Chapter 8.

رفتن *raftan*

to go — the verb that shows why every Persian verb comes in two pieces
Introduced in Chapter 6.

سلام *salâm*

hello / peace

Introduced in Chapter 1.

ستاره *setâre*

star

Introduced in Chapter 13.

شما / تو *shomâ / to*

you — respectful or plural / familiar singular

Introduced in Chapter 3.

زبان *zabân*

tongue, and language — the word for the thing you are learning, and the
tranche's closing review

Introduced in Chapter 11.

زن *zan*

woman — a root English kept behind a royal title

Introduced in Chapter 14.

Review Questions

Try these without looking ahead. Every prompt comes from the same canonical lesson data as its chapter. Answers begin in the next section.

Chapter 2

2.1 من اسم است ... — *my name is ...*

Type the careful Persian sentence 'My name is Sara.'

Chapter 3

3.1 تو / شما — *two relationships inside "you"*

Type the Persian 'you' safest in a first meeting.

3.2 چیست — *"what is?" in one joined word*

Join Persian chi + ast into the careful form 'what is?.'

3.3 شما اسم چیست؟ — *ask a name respectfully*

Type the respectful Persian question 'What is your name?'

3.4 خوشوقتم — *pleased to meet you*

Type the Persian response 'Pleased to meet you.'

3.5 Practice — *a complete Persian name exchange*

After someone asks شما اسم چیست؟, type the careful Persian answer using Sara.

Chapter 4

4.1 حال — *the "state" in a wellbeing question*

Type the Persian word meaning 'state' or 'condition'.

4.2 چطور — *"how?" one layer at a time*

Type the Persian question word meaning 'how?.'

4.3 است؟ چطور شما حال — *ask “How are you?” respectfully*

Type the careful respectful Persian question ‘How are you?’.

4.4 خوب — *“good” and “well”*

Type the Persian word meaning ‘good’ or ‘well’.

4.5 ممنون خوبم، — *“I am well, thank you”*

Reply in Persian: ‘I am well, thank you.’

4.6 Practice — *a Persian wellbeing exchange*

After است؟ چطور شما حال, type the polite Persian reply.

Chapter 5

5.1 خدا — *the Persian half of a farewell*

Type the Persian word *khodâ*, meaning ‘God’.

5.2 حافظ — *“guardian” or “protector”*

Type the Persian word *hâfez*, meaning ‘guardian’ or ‘protector’.

5.3 خداحافظ — *goodbye*

Type the standard Persian expression for ‘goodbye’.

5.4 Practice — *open, check, and close*

The short Persian interaction is ending. Type the final expression.

Chapter 6

6.1 بودن — *“to be,” and the ending every Persian verb wears*

Type the Persian verb meaning ‘to be’.

6.2 رفتن — *“to go,” and the second form that travels with it*

Give the present stem that goes with رفتن (*raftan*).

6.3 آمدن — *“to come,” and an alef that wears a hat*

Type the Persian verb meaning ‘to come’.

6.4 گفتن — *“to say,” written with a letter Arabic does not have*

Give the present stem that goes with گفتن (*goftan*).

6.5 دانستن — *“to know,” and five pairs held together*

Give the present stem that goes with دانستن (*dânestan*).

Chapter 7

7.1 کردن فکر — “to think,” written as two words

Type the two Persian words that together mean ‘to think’.

7.2 فهمیدن — “to understand,” and the class that gives its stem away

Give the present stem that goes with فهمیدن (fahmidan).

7.3 خواندن — “to read,” and a letter that is written but not said

In خواندن, which written letter is not pronounced?

7.4 نوشتن — “to write,” and four verbs of the mind held together

Give the present stem that goes with نوشتن (neveshtan).

Chapter 8

8.1 گرفتن — “to take,” and a cousin you can hear

Give the present stem that goes with گرفتن (gereftan).

8.2 پرسیدن — “to ask,” and the questions you could already ask

Give the present stem that goes with پرسیدن (porsidan).

8.3 کمک کردن — “to help,” and the machine on its second run

Type the two Persian words that together mean ‘to help’.

8.4 داشتن دوست — “to love,” which Persian says as “to have as friend”

Type the two Persian words that together mean ‘to love’.

Chapter 9

9.1 آب — water, and Persian’s first “please”

Type the Persian for ‘water, please’.

9.2 نان — bread, and a root this track cannot trace

Type the Persian word for ‘bread’.

9.3 چای — tea, and the road that gave everyone but Europe the same word

Type the Persian word for ‘tea’.

9.4 کلید — key, a Greek word Persian has held for two thousand years

Type the Persian word for ‘key’.

Chapter 10

10.1 مادر — *mother, a word this track already promised you*

Type the Persian word for 'mother'.

10.2 پدر — *father, mādār's oldest partner*

Type the Persian word for 'father'.

10.3 برادر — *brother, the cousin that never drifted*

Type the Persian word for 'brother'.

10.4 دختر — *daughter, and the family the بودن lesson promised is complete*

Type the Persian word for 'daughter'.

Chapter 11

11.1 چشم — *eye, and what "how are you" was really pointing at*

Type the Persian word for 'eye'.

11.2 دست — *hand, and a sound law that hides a cousin in plain sight*

Type the Persian word for 'hand'.

11.3 پا — *foot, the plainest cousin in the whole track*

Type the Persian word for 'foot'.

11.4 زبان — *tongue, and language, and everything this track has built*

Type the Persian word that means both 'tongue' and 'language'.

Chapter 12

12.1 نام — *name, the word Persian never borrowed*

Type the Persian word for 'name' that is NOT the Arabic loan اسم.

12.2 دل — *heart*

Type the Persian word for 'heart'.

12.3 در — *door*

Type the Persian word for 'door'.

12.4 کتاب — *book, and the name exchange this chapter reopens*

Type the Persian word for 'book'.

Chapter 13

13.1 آسمان — *sky*

Type the Persian word for 'sky'.

13.2 خورشید — *sun, a word built from two old pieces*

Type the Persian word for 'sun'.

13.3 ماه — *moon, and month*

Type the Persian word that means both 'moon' and 'month'.

13.4 ستاره — *star*

Type the Persian word for 'star'.

13.5 باران — *rain, and the wellbeing question this chapter answers differently*

Type the Persian word for 'rain'.

Chapter 14

14.1 خواهر — *sister, the family word the earlier tranche skipped*

Type the Persian word for 'sister'.

14.2 پسر — *son, دختر's missing counterpart*

Type the Persian word for 'son'.

14.3 مرد — *man, but its root says "mortal"*

Type the Persian word for 'man'.

14.4 زن — *woman, a root hiding behind a royal title*

Type the Persian word for 'woman'.

14.5 دوست — *friend, and everything this tranche has built*

Type the Persian word for 'friend'.

Chapter 15

15.1 | — *one stroke, and the direction of the page*

In a Persian word, which letter do you read first — the leftmost or the rightmost?

15.2 ل — *alef, with a bowl at its foot*

What is the difference between the letters alef and lâm?

15.3 س — *three teeth, then a bowl*

How many teeth does the letter sin have before its bowl?

15.4 م — *a loop, and a tail below the line*

What part of mim drops below the writing line?

15.5 *Letters that hold hands, and two that will not*

You see a gap in the middle of a Persian word. What is the likeliest reason?

15.6 *ب — a bowl, and one dot underneath*

Where does the dot of be sit — above the bowl or below it?

15.7 *ت and ن — the same bowl, dotted differently*

A bowl with two dots above it — which letter is that?

15.8 *ه — the letter with four costumes*

What does the letter he usually sound like at the END of a Persian word?

15.9 *و — one shape, three jobs, and no hand offered to the left*

Which other letter in this chapter behaves like vâv, joining on the right but never on the left?

15.10 *Practice — seven words you already knew, now read*

Persian writes its long vowels but usually leaves out the short ones. What does that mean for reading a word you have never heard?

Answer Key

The first response is the canonical display answer. When a question accepts other authored forms, they appear underneath.

Chapter 2

2.1 من اسم است ... — *my name is ...*

Answer: است سارا من اسم

Also accepted: esm-e man Sara ast; esm-e man Sârâ ast

Chapter 3

3.1 تو / شما — *two relationships inside “you”*

Answer: شما

Also accepted: shoma; shomâ; shomâ

3.2 چیست — *“what is?” in one joined word*

Answer: چیست

Also accepted: chist; chîst

3.3 چیست؟ شما اسم — *ask a name respectfully*

Answer: چیست؟ شما اسم

Also accepted: چیست شما اسم; esm-e shoma chist; esm-e shomâ chist

3.4 خوشوقتم — *pleased to meet you*

Answer: خوشوقتم

Also accepted: khoshvaghtam; khoshvaqtam

3.5 Practice — *a complete Persian name exchange*

Answer: است سارا من اسم

Also accepted: esm-e man Sara ast; esm-e man Sârâ ast

Chapter 4

4.1 حال — *the “state” in a wellbeing question*

Answer: حال

Also accepted: hal; hâl; hāl

4.2 چطور — *“how?” one layer at a time*

Answer: چطور

Also accepted: chetor; chetowr

4.3 است؟ چطور شما حال — *ask “How are you?” respectfully*

Answer: است؟ چطور شما حال

Also accepted: است؟ چطور شما حال; hal-e shoma chetor ast; hâl-e shomâ chetor ast

4.4 خوب — *“good” and “well”*

Answer: خوب

Also accepted: khub; khûb; khoob

4.5 ممنون خوبم، — *“I am well, thank you”*

Answer: ممنون خوبم،

Also accepted: ممنون خوبم; khubam mamnun; khûbam mamnûn

4.6 Practice — *a Persian wellbeing exchange*

Answer: ممنون خوبم،

Also accepted: ممنون خوبم; khubam mamnun; khûbam mamnûn

Chapter 5

5.1 خدا — *the Persian half of a farewell*

Answer: خدا

Also accepted: khoda; khodâ; xodâ; xoda

5.2 حافظ — *“guardian” or “protector”*

Answer: حافظ

Also accepted: hafez; hâfez; hâfez; hafiz

5.3 خداحافظ — *goodbye*

Answer: خداحافظ

Also accepted: khodahafez; khoda hafez; khodâ hâfez; khodâ hâfez; xodâhâfez

5.4 Practice — *open, check, and close*

Answer: خداحافظ

Also accepted: khodahafez; khoda hafez; khodâ hâfez; khodâ hâfez

Chapter 6

6.1 بودن — *“to be,” and the ending every Persian verb wears*

Answer: بودن

Also accepted: budan; būdan

6.2 رفتن — “to go,” and the second form that travels with it

Answer: رو

Also accepted: rav; raw; rav-; ro

6.3 آمدن — “to come,” and an alef that wears a hat

Answer: آمدن

Also accepted: amadan; âmadan; āmadan

8.4 داشتن دوست — *“to love,” which Persian says as “to have as friend”*

Answer: داشتن دوست

Also accepted: dust dashtan; dust dâshtan; dost dashtan; doost dashtan; dūst dāštan

Chapter 9

9.1 آب — *water, and Persian’s first “please”*

Answer: لطفاً آب،

Also accepted: ab lotfan; âb, lotfan; ab, lotfan; āb lotfan

9.2 نان — *bread, and a root this track cannot trace*

Answer: نان

Also accepted: nan; nân; nān

9.3 چای — *tea, and the road that gave everyone but Europe the same word*

Answer: چای

Also accepted: chay; chây; chai

9.4 کلید — *key, a Greek word Persian has held for two thousand years*

Answer: کلید

Also accepted: kelid; kalid; kelīd

Chapter 10

10.1 مادر — *mother, a word this track already promised you*

Answer: مادر

Also accepted: madar; mādār; mādār

10.2 پدر — *father, mādār’s oldest partner*

Answer: پدر

Also accepted: pedar; pidar

10.3 برادر — *brother, the cousin that never drifted*

Answer: برادر

Also accepted: baradar; barādar; barādar

10.4 دختر — *daughter, and the family the بودن lesson promised is complete*

Answer: دختر

Also accepted: dokhtar; dukhtar; duxtar

Chapter 11

11.1 چشم — *eye, and what “how are you” was really pointing at*

Answer: چشم

Also accepted: cheshm; chashm

11.2 دست — *hand, and a sound law that hides a cousin in plain sight*

Answer: دست

Also accepted: dast

11.3 پا — *foot, the plainest cousin in the whole track*

Answer: پا

Also accepted: pa; pâ; pā

11.4 زبان — *tongue, and language, and everything this track has built*

Answer: زبان

Also accepted: zaban; zabân; zabān

Chapter 12

12.1 نام — *name, the word Persian never borrowed*

Answer: نام

Also accepted: nam; nām; nān

12.2 دل — *heart*

Answer: دل

Also accepted: del; dil

12.3 در — *door*

Answer: در

Also accepted: dar

12.4 کتاب — *book, and the name exchange this chapter reopens*

Answer: کتاب

Also accepted: ketab; ketâb; kitab

Chapter 13

13.1 آسمان — *sky*

Answer: آسمان

Also accepted: aseman; âsemân; asman

13.2 خورشید — *sun, a word built from two old pieces*

Answer: خورشید

Also accepted: khorshid; xorshid

13.3 ماه — *moon, and month*

Answer: ماه

Also accepted: mah; mât; mât

13.4 ستاره — *star*

Answer: ستاره

Also accepted: setare; setâre; sitare

13.5 باران — *rain, and the wellbeing question this chapter answers differently*

Answer: باران

Also accepted: baran; bârân

Chapter 14

14.1 خواهر — *sister, the family word the earlier tranche skipped*

Answer: خواهر

Also accepted: khahar; khâhar; xahar

14.2 پسر — *son, دختر's missing counterpart*

Answer: پسر

Also accepted: pesar

14.3 مرد — *man, but its root says "mortal"*

Answer: مرد

Also accepted: mard

14.4 زن — *woman, a root hiding behind a royal title*

Answer: زن

Also accepted: zan

14.5 دوست — *friend, and everything this tranche has built*

Answer: دوست

Also accepted: dust; dost; doost

Chapter 15

15.1 | — *one stroke, and the direction of the page*

Answer: the rightmost

Also accepted: rightmost; the right one; the one on the right; right

15.2 ل — *alef, with a bowl at its foot*

Answer: lam has a bowl at the foot

Also accepted: the bowl at the bottom; lam curves at the foot; a curve at the bottom; lam has a curve

Answer: te

Also accepted: ت; t; the letter te

15.8 ه — *the letter with four costumes*

Answer: a final e

Also accepted: an e; the e sound; e; a soft e vowel

15.9 و — *one shape, three jobs, and no hand offered to the left*

Answer: alef

Also accepted: ا; the letter alef; alif

15.10 Practice — *seven words you already knew, now read*

Answer: you cannot reliably sound it out

Also accepted: you cannot sound it out; you have to know the word already; you cannot be sure of the vowels; reading and listening must grow together

A note on sources

Script descriptions follow the University of Texas at Austin Persian Online writing-system materials; its open greetings vocabulary grounds the Chapter 4 wellbeing forms and the Chapter 5 farewell.

Index

Look up an English meaning, a dedicated language topic, or a chapter topic. Each linked reference opens the chapter where the material is introduced; the focus labels name only explicitly typed lesson sections.

A

Ask and Answer Names

chapter topic; Chapter 3, p. 7

B

book — an Arabic loan, and the chapter's payoff كتاب (ketâb)

explicit focus: grammar, etymology; Chapter 12, p. 65

bread — a word this track cannot trace, and English quietly

borrowed anyway نان (nân)

explicit focus: etymology; Chapter 9, p. 47

brother — the third of Chapter 6's promised

cousins برادر (barâdar)

explicit focus: etymology; Chapter 10, p. 53

D

daughter — Chapter 6's last promised cousin, and the family

closes دختر (dokhtar)

explicit focus: grammar, etymology; Chapter 10, p. 53

door در (dar)

explicit focus: etymology; Chapter 12, p. 65

E

Eye, Hand, Foot, Tongue

chapter topic; Chapter 11, p. 59

eye — the body part behind the family a doctor's question

would ask about چشم (cheshm)

explicit focus: etymology; Chapter 11, p. 59

F

father — the second cousin Chapter 6 named in

passing پدر (pedar)

explicit focus: etymology; Chapter 10, p. 53

foot — the corpus's most secure cognate, unmarked by any

sound-law puzzle پا (pâ)

explicit focus: etymology; Chapter 11, p. 59

Four Verbs of the Mind

chapter topic; Chapter 7, p. 31

friend — the standalone noun, and the closing word of this whole

tranche دوست (dust)

explicit focus: etymology; Chapter 14, p. 77

G

Give your name

chapter topic; Chapter 2, p. 5

God — the inherited Persian half of the standard

farewell خدا (khodâ)

explicit focus: etymology; Chapter 5, p. 19

good, well خوب (khub)

explicit focus: etymology; Chapter 4, p. 13

goodbye — the standard Persian farewell خدا حافظ (khodâ hâfez)

explicit focus: grammar; Chapter 5, p. 19

Greetings and responses

chapter topic; Chapter 1, p. 1

guardian, protector — the Arabic-rooted half of the

farewell حافظ (hâfez)

explicit focus: etymology; Chapter 5, p. 19

H

hand — a regular sound law hiding behind three different-looking Indo-Iranian words دست (dast)

explicit focus: etymology; Chapter 11, p. 59

heart دل (del)

explicit focus: etymology; Chapter 12, p. 65

hello / peace سلام (salâm)

explicit focus: writing, etymology, usage and culture; Chapter 1, p. 1

How Are You?

chapter topic; Chapter 4, p. 13

How are you? (careful, respectful) است؟ چطور شما حال (hâl-e shomâ chetor ast?)

explicit focus: grammar; Chapter 4, p. 13

how; in what manner چطور (chetor)

explicit focus: etymology; Chapter 4, p. 13

I

I am well, thank you ممنون خوبم، (khubam, mamnun)

explicit focus: grammar; Chapter 4, p. 13

K

key — a Greek word Persian has held since Alexander, and the chapter's payoff کلید (kelid)

explicit focus: grammar, etymology; Chapter 9, p. 47

L

Letters that hold hands, and two that will not

script and writing topic; explicit focus: script; Chapter 15, p. 85

M

man — not English “man,” but “mortal” مرد (mard)

explicit focus: etymology; Chapter 14, p. 77

moon, and month — one old word doing two jobs, like زبان before

it ماه (mâh)

explicit focus: etymology; Chapter 13, p. 71

**mother — a word Chapter 6 already named as an English cousin,
now taught in full** مادر (mâdar)

explicit focus: etymology; Chapter 10, p. 53

Mother, Father, Brother, Daughter

chapter topic; Chapter 10, p. 53

my name is ... است ... من اسم (esm-e man ... ast)

explicit focus: grammar, etymology; Chapter 2, p. 5

N

Name a Verb, Find Its Stem

chapter topic; Chapter 6, p. 23

Name, Heart, Door, Book

chapter topic; Chapter 12, p. 65

name — Persian's own inherited word, beside the Arabic اسم

already learned نام (nâm)

explicit focus: etymology; Chapter 12, p. 65

Nine Letters, and the Words You Already Knew

chapter topic; Chapter 15, p. 85

no نه (na)

Chapter 1, p. 1

P

Please: Water, Bread, Tea, Key

chapter topic; Chapter 9, p. 47

pleased to meet you خوشوقتتم (khoshvaghtam)

explicit focus: etymology; Chapter 3, p. 7

R

rain — the chapter's payoff, and a sky word with no English

cousin باران (bârân)

explicit focus: grammar, etymology; Chapter 13, p. 71

S

Sister, Son, Man, Woman, Friend

chapter topic; Chapter 14, p. 77

sister — the family word the earlier family tranche left

out خواهر (khâhar)

explicit focus: etymology; Chapter 14, p. 77

sky آسمان (âsemân)

explicit focus: etymology; Chapter 13, p. 71

Sky, Sun, Moon, Star, Rain

chapter topic; Chapter 13, p. 71

son — دختر's counterpart, an Indo-Iranian cousin with no English

relative پسر (pesar)

explicit focus: etymology; Chapter 14, p. 77

star ستاره (setâre)

explicit focus: etymology; Chapter 13, p. 71

state, condition — the state in “How are you?” حال (hâl)

explicit focus: etymology; Chapter 4, p. 13

sun — one root and a second, unrelated one, fused into a single

word خورشید (khorshid)

explicit focus: etymology; Chapter 13, p. 71

T

Take Leave

chapter topic; Chapter 5, p. 19

Taking, Asking, Helping, Loving

chapter topic; Chapter 8, p. 39

tea — Persian's own leg of the overland road from

Chinese چای (chây)

explicit focus: etymology; Chapter 9, p. 47

thank you / grateful ممنون (mamnun)

Chapter 1, p. 1

to ask — the verb behind a question you have been asking since

Chapter 3 پرسیدن (porsidan)

explicit focus: grammar, etymology; Chapter 8, p. 39

to be — and the ending every Persian verb wears بودن (budan)

explicit focus: grammar, etymology; Chapter 6, p. 23

to come — with the hat-wearing alef and a root English kept as

come آمدن (âmadan)

explicit focus: etymology; Chapter 6, p. 23

to go — the verb that shows why every Persian verb comes in

two pieces رفتن (raftan)

explicit focus: grammar, etymology; Chapter 6, p. 23

to help — the compound pattern proving itself, and a third layer

in the vocabulary کردن کمک (komak kardan)

explicit focus: etymology; Chapter 8, p. 39

- to know — the chapter’s clearest cousin, and the place all five pairs come back** دانستن (dānestan)
explicit focus: etymology; Chapter 6, p. 23
- to like, to love — “to have as friend,” and the place all thirteen verbs run together** داشتن دوست (dust dāshtan)
explicit focus: grammar, etymology; Chapter 8, p. 39
- to read — and to recite, and to sing, because all three are sounding** خواندن (khândan)
explicit focus: grammar, etymology; Chapter 7, p. 31
- to say — and the Persian-only letter گ that starts it** گفتن (goftan)
explicit focus: etymology; Chapter 6, p. 23
- to take — and the clearest English cousin in this book** گرفتن (gereftan)
explicit focus: etymology; Chapter 8, p. 39
- to think — two words bolted into one verb, and the pattern that builds hundreds more** کردن فکر (fekr kardan)
explicit focus: grammar, etymology; Chapter 7, p. 31
- to understand — and the one Persian verb class whose stem you can predict** فهمیدن (fahmidan)
explicit focus: grammar, etymology; Chapter 7, p. 31
- to write — the chapter’s last pair, and the place all four run together** نوشتن (neveshtan)
explicit focus: grammar, etymology; Chapter 7, p. 31
- tongue, and language — the word for the thing you are learning, and the tranche’s closing review** زبان (zabân)
explicit focus: etymology; Chapter 11, p. 59

W

- water — and Persian’s first “please”** آب (âb)
explicit focus: grammar, etymology; Chapter 9, p. 47
- what is?** چیست (chist)
explicit focus: grammar; Chapter 3, p. 7
- What is your name? (respectful)** چیست؟ شما اسم (esm-e shomâ chist?)
explicit focus: script; Chapter 3, p. 7
- woman — a root English kept behind a royal title** زن (zan)
explicit focus: etymology; Chapter 14, p. 77

Y

- yes** بله (bale)
Chapter 1, p. 1

you — respectful or plural / familiar singular شما / تو (shomâ / to)
 explicit focus: grammar, etymology; Chapter 3, p. 7

Other

ا — one stroke, and the direction of the page

script and writing topic; explicit focus: script; Chapter 15, p. 85

ا — one stroke with the model present

script and writing topic; explicit focus: script, writing; Chapter 1, p. 1

ب — a bowl, and one dot underneath

script and writing topic; explicit focus: script; Chapter 15, p. 85

ت and ن — the same bowl, dotted differently

script and writing topic; explicit focus: script; Chapter 15, p. 85

س — three teeth, then a bowl

script and writing topic; explicit focus: script; Chapter 15, p. 85

ل — alef, with a bowl at its foot

script and writing topic; explicit focus: script; Chapter 15, p. 85

م — a loop, and a tail below the line

script and writing topic; explicit focus: script; Chapter 15, p. 85

ه — the letter with four costumes

script and writing topic; explicit focus: script; Chapter 15, p. 85

و — one shape, three jobs, and no hand offered to the left

script and writing topic; explicit focus: script; Chapter 15, p. 85
