

German, Step by Step, Root by Root

An etymology-driven curriculum, built one word at a time

Adhithya Rajasekaran

This edition compiled incrementally — new chapters added as they
are written.

Preface

This book teaches German one word at a time, and it teaches each word by taking it apart. It is written for someone starting from zero, whose only shared language is English. The method is the same as its companion volumes — one word per lesson, gone deep — but the etymology flows through a different channel. Spanish and French are Latin’s children; *German is English’s sibling*. Both are Germanic languages, so German words are most often *direct cousins* of English words, with no Latin middleman: *gut* is English *good*, *Tag* is *day*, *Nacht* is *night*. The gaps between them are not random — they follow the **High German Consonant Shift** ($d \rightarrow t$, $t \rightarrow s$, $k \rightarrow ch$), a single sound-law you can learn once and then use to guess the English cousin on sight (the Romance languages have their own such laws — Latin *-ct-* became Spanish *-ch-*).

Where it lights something up, the book sets German beside its cousins — English always, and Spanish and French as Latin’s side of the family, each form supplied in full so no prior knowledge of them is needed. The richest moment is *Nacht*, where German *Nacht*, English *night*, Spanish *noche*, and French *nuit* turn out to be the same Indo-European word, split four ways.

How to use this book

Every numbered section is one word, or one small phrase, and takes a few minutes — the length of a queue, an errand, or the walk to the bus. Read them in order the first time through: each section stands on the ones before it, and nothing is used before it has been taught. After that the book becomes reference, and you can open it anywhere.

Say the German out loud wherever you can. The prompts under *Your turn* are written to be spoken, and saying a word is most of what makes it stay. The questions under *Before you move on* carry their own answers in brackets: cover them, answer from memory, then look.

Nothing here is gated behind pronunciation. Each lesson names the one

or two sounds its own word needs, exactly where they are needed. The whole system is gathered in a reference at the back of the book — somewhere to look things up when you are curious, never a chapter to sit through first.

4.15	Großschreibung	71
4.16	Practice	72

5	The First Verbs	75
5.1	<i>wohnen</i> — “to live,” and the regular German verb . . .	75
5.2	<i>machen</i> — “to make / to do,” and it is just English <i>make</i>	76
5.3	<i>lernen</i> — “to learn,” and it <i>is</i> English <i>learn</i>	77
5.4	<i>Ich lerne Deutsch</i> — your first real sentence	78
5.5	Making sentences with weak verbs	79
6	Numbers One to Ten	81
6.1	<i>eins, zwei, drei, vier, fünf</i> — counting to five	81
6.2	<i>sechs</i> to <i>zehn</i>	82
7	The Days of the Week	85
7.1	<i>Montag</i> to <i>Freitag</i> — the gods of the Germanic week . .	85
7.2	<i>Samstag</i> and <i>Sonntag</i> — the German weekend	86
8	Telling the Time	89
8.1	<i>Uhr</i> — the clock, and a Roman word in the German day	89
8.2	<i>Mittag</i> and <i>Mitternacht</i>	90
9	Months and Seasons	93
9.1	<i>die Monate</i> — Rome’s calendar in German	93
9.2	<i>die Jahreszeiten</i> — the seasons go native	94
10	Family	97
10.1	<i>der Vater, die Mutter</i> — the pair that proves Grimm’s law	97
10.2	<i>Bruder, Schwester, Geschwister</i>	98
11	Bread, Water, Wine	101
11.1	<i>das Brot</i> — bread, and the third gender	101
11.2	<i>Wasser</i> and <i>Wein</i>	102
12	Numbers Eleven to Twenty	105
12.1	<i>elf</i> und <i>zwölf</i> — “one left over,” “two left over”	105
12.2	<i>dreizehn</i> to <i>zwanzig</i>	106
13	Colours	109
13.1	<i>schwarz, weiß</i> — black and white, and the word German lent away	109
13.2	<i>rot</i> and <i>blau</i>	110

14	To Have, and How Old You Are	113
14.1	<i>haben</i> — “to have,” the twin of English <i>have</i>	113
14.2	<i>ich bin zwanzig Jahre alt</i> — being your years	114
15	The Two Past Tenses	117
15.1	<i>ich habe gesagt</i> — the past built from “have”	117
15.2	<i>ich sagte</i> — the simple past	118
16	I Am, You Are	121
16.1	<i>sein</i>	121
16.2	<i>ich bin</i>	122
16.3	<i>du bist</i>	124
16.4	<i>er ist</i>	125
16.5	<i>wir sind</i>	126
16.6	<i>ihr seid</i>	127
16.7	<i>sie sind / Sie sind</i>	128
16.8	<i>müde</i>	129
16.9	Practice	130
17	Three Verbs Under One Roof	133
17.1	<i>ich war</i>	133
17.2	<i>du warst</i>	134
17.3	<i>er war</i>	135
17.4	<i>wir waren</i>	136
17.5	<i>bin, ist, war</i>	137
17.6	Suppletion	139
17.7	<i>warum sein unregelmäßig ist</i>	140
17.8	Practice	141
18	The Past That Takes To Be	143
18.1	<i>ich bin gegangen</i>	143
18.2	<i>kommen</i>	145
18.3	<i>fahren</i>	146
18.4	<i>werden</i>	147
18.5	<i>bleiben</i>	149
18.6	<i>ich bin gewesen</i>	150
18.7	<i>gegangen</i>	151
18.8	<i>der angekommene Zug</i>	153
18.9	Practice	154

19	Head and Hand	157
19.1	der Kopf	157
19.2	Kopf / Haupt	158
19.3	die Hand	160
20	Yes and No	163
20.1	ja	163
20.2	nein	164
21	Please	167
21.1	bitte	167
22	Sorry	169
22.1	Entschuldigung	169

Chapter 1

Greetings

Modes: 🗣️ voice (12) ✍️ pen (2) 🗣️ Hands-free start: first 1 of 14 lessons.

By the end of this chapter: I can greet someone in German, recognize the reply, and choose an appropriate response.

The German greetings, built from their pieces — a word for “good,” the day-parts, and the three-gender article system. Because German and English are siblings, most words here are direct cousins, reshaped by the High German Consonant Shift; where it helps, Spanish and French stand alongside for contrast. Writing begins with the same familiar cousin: follow one visible Hallo, then copy it once while the model stays in sight — no hidden spelling and no second word are due. GE-C01-practice closes the chapter by running the whole arc, casual to bedtime.

1.1 hallo — “hello,” and this time it *is* a cousin

Your first German word — and a reassuring one, because German and English are close cousins: *both are Germanic languages*. That kinship will help you all through this book, and *hallo* is the first proof.

Sounds you’ll need

- German **h** is pronounced (not silent like Spanish/French): *HA-lo*.
- German **a** is a clean, open *ah*.

The word, taken apart — and its English cousins

hallo — informal “hello / hi.” Unlike Spanish *hola* (which only *looks* like “hello” by coincidence — a false friend), German **hallo** and English **hello** are the real thing: both grew from the same old Germanic hailing call (*hala*, a shout to get attention or hail a ferryman), the same family as English *holla*, *hollo*, and *hail*. Nineteenth-century English “hello” was even shaped partly by German *hallo*.

The pattern to carry through this whole book: because English is a Germanic language, German words are often **direct cousins** of English words — same family, no Latin middleman. (The Romance languages like Spanish and French reach English mostly *through* Latin; German reaches it directly.)

Why it’s said this way

hallo is informal-to-neutral — fine among friends, and increasingly common generally. Polite or first meetings often use a daytime greeting instead. You will build that greeting one familiar piece at a time over the next few lessons.

Writing — follow one word you can see

Keep **Hallo** visible. Trace directly over it, then copy it once in large, slow letters. Say *HA-lo* while your hand moves. Stop there.

This is not spelling from memory and not free writing. Your eye and hand are only following a word whose meaning and sound are already on the page.

Your turn

Say these aloud:

- “hallo” — *HA-lo*, with a real *h*
- “hallo” then English “hail”, “holler” — the true hailing family

Before you move on

Is German *hallo* a real cousin of English *hello*, or a coincidence like Spanish *hola*? (A real cousin — same Germanic hailing root.)

1.2 Hallo — copy one greeting with help

Point to **Hallo** and say it once: *HA-lo*. The model stays on the page.

Writing — one guided copy

Copy **Hallo** once on the line below it. Begin with the tall capital **H**, then follow with **allo**. Look back at the model whenever you want.

Say the word as you finish. Then draw one small line under the **H** that German and English inherited in the same old hailing family.

Before you move on

Compare your copy with the model. If one letter differs, repair only that letter. No hiding, no spelling test, and no second word today.

1.3 gut — “good,” and the sound-law that reshapes German

This word starts most German greetings. It’s a direct twin of English “good” — and the *tiny* difference between them (*good* vs *gut*) opens the single most useful decoding rule in the language.

Sounds you’ll need

- German **u** = *oo* as in *food* or English *boot*: *goot*. The final **t** stays crisp — never softened. → reference

The word, taken apart — and its English cousins

gut — “good.” Root: Proto-Germanic ***gōdaz** — and English **good** comes from the *exact same* word. No Latin in sight; German and English just inherited it from their shared Germanic parent. So why *gut* and not *good*? One sound-law:

The High German Consonant Shift. Long ago, German (but not English) pushed a whole set of consonants forward. One of its rules: **d** → **t**. So every English *d* tends to show up as *t* in German:

English	German
good	gut
day	Tag
bed	Bett
do	tun

It's a single regular sound-law — the same kind of trick that reshaped the Romance languages (Latin *-ct-* became Spanish *-ch-*, *noche*). Learn the shift once, and you can guess the English cousin behind a German word (and vice-versa) on sight. More rules of the shift as we go.

Grammar Lens: German merges “good” and “well”

English splits *good* (adjective) from *well* (adverb); Spanish splits *bueno* from *bien*; French splits *bon* from *bien*. **German does not** — *gut* is *both*. “A good day” is *ein guter Tag* — and the very same *gut* is how you say you are doing well, which is what the wellbeing exchange is built on. One word covers the whole job, so the Romance *bien/bueno* pair collapses back into a single German word.

Your turn

Say these aloud:

- “gut” — *goot*
- “gut” then “good” — the d→t shift
- “Tag” then “day”; “gut” then “good” — same shift, twice

Before you move on

English *d* becomes which letter in German? (*t* — *good*→*gut*, *day*→*Tag*.) Does German split “good” and “well” like English? (No — *gut* is both.)

1.4 der, die, das — “the,” and the gender English *and* the Romance languages lost

Before your first noun: German’s words for “the.” Many European languages tag every noun with a grammatical *gender* — Spanish and French each run two — and German has it too, but with a twist neither of them kept.

Sounds you’ll need

- **der** = *dair*, **die** = *dee*, **das** = *dahss*. The **r** of *der* is barely a vowel-like murmur at the back of the mouth, not an English *r*; *die* rhymes with English *see*; the final **s** of *das* is a sharp *ss*.

The word, taken apart — and its English cousins

der — “the” (masculine). **die** — “the” (feminine). **das** — “the” (neuter). Roots: the old Germanic demonstratives ***sa** / ***sō** / ***pat** (“that one”) — the *same* family as English **the** and **that**:

- **das** ↔ English **that** (the High German shift again: English *t* → German *s*, so *that* → *das*).
- **die** ↔ the *-y* of English **the**/**they**.

Unlike Spanish *el/la* and French *le/la* (both from Latin *ille/illa*), German’s articles are cousins of English’s own “the” — Germanic all the way.

Grammar Lens: German kept THREE genders

Here’s the twist. Latin had three genders (masculine, feminine, neuter); Spanish and French **collapsed to two**, folding neuter into masculine. German **kept all three**: *der* (masc.), *die* (fem.), *das* (neut.). So a German noun is one of *three* classes, not two — and, as everywhere, the gender is unpredictable and must be learned *with* the noun and its article. English, meanwhile, threw gender out entirely and kept a single “the” — the opposite extreme. Your next nouns will let you practise that pairing.

One more thing coming later: German articles also change by **case** (their job in the sentence), so *der* has other forms (*den*, *dem*, *des*).

Ignore that for now; just learn *der* / *die* / *das* as the three “the”s.

Your turn

Say these aloud:

- “der”, “die”, “das”
- “das” then English “that” — the t→s shift
- “der” for masculine, “die” for feminine, “das” for neuter

Before you move on

How many genders does German keep, vs Spanish/French? (Three vs two — German kept the neuter, *das*.) What English word is *das* a cousin of? (*That*.)

1.5 Tag — “day,” a straight cousin of English *day*

Your first German noun. In Spanish “day” was *día* (via Latin); in French, *jour* (via a longer Latin detour). In German it’s *Tag* — and it’s simply English “day” with one consonant shifted.

What to know first

- der / die / das — gender; *Tag* is masculine, *der Tag*.

Sounds you’ll need

- **Tag** = *tahk* — a long open *a*, the vowel of English *father*; Germans harden a final *-g* to a *k* (**final devoicing**), so *Tag* rhymes with English *tock*, not with English *tag*. German nouns are always **Capitalized** (every noun, not just names).

The word, taken apart — and its English cousins

der Tag — “the day” (masculine). Root: Proto-Germanic ***dagaz** — and English **day** is the same word. The only difference is the High German Consonant Shift from the *gut* lesson (**d** → **t**): *dagaz* → English *day*, German *Tag*.

So the three Romance-and-Germanic “day” words line up by ancestry:

- Spanish *día*, French *jour* ← Latin *dies* / *diurnum*
- German **Tag** ↔ English **day** ← Germanic **dagaz*

Two entirely different roots for “day” (Latin *dies* vs Germanic *dagaz*) — which is why *día* and *Tag* look nothing alike, even though both languages are cousins far enough back.

Grammar Lens

Tag is **masculine** (*der Tag*) — learn it with its article, as always. Also note the capital *T*: German writes **every** noun with a capital letter, a spelling rule no other language here shares.

Your turn

Say these aloud:

- “der Tag” — *dair tahk*
- “Tag” then “day” — hear the d→t shift

Before you move on

Tag and English *day* share a Germanic root; the shift is which consonant change? (*d*→*t*.) What’s odd about how German writes *Tag*? (Capitalized — all German nouns are.)

1.6 Guten Tag — assembled, and a first taste of German endings

Snap *gut* and *Tag* together for the standard polite greeting. But notice — *gut* shows up as *guten*, and that extra *-en* is your first glimpse of how German adjectives work.

What to know first

- gut · Tag

The word, taken apart — and its English cousins

Guten Tag = **gut** (“good”) + **Tag** (“day”) = “good day,” the neutral polite “hello” for daytime. Said *GOO-ten tahk*.

Grammar Lens: why *guten*, not *gut*?

Like every Germanic and Romance adjective, German *gut* **agrees** with its noun — but German adjectives agree in *more* dimensions than Spanish or French: not just gender and number, but **case** (the noun’s job in the sentence). *Guten Tag* is a frozen piece of a fuller phrase: *ich wünsche einen guten Tag*, “I wish a good day.” In that fuller thought, “a good day” is the *object* of the wish (the accusative case). For a masculine noun in that role, *gut* takes the ending **-en**: *guten*. Don’t try to master German’s ending system now — it’s a later chapter. Just bank two things: (1) German adjectives take endings that shift with gender, number, *and* case; (2) the greeting is really “(I wish you a) good day,” which is why it’s *guten*. A later bedtime greeting will give you a gentle contrast with a feminine noun and a different ending.

Your turn

Say these aloud:

- “Guten Tag” — *GOO-ten tahk*
- “Hallo” (casual) then “Guten Tag” (polite) — the register gap

Before you move on

Guten Tag literally shortens from what fuller phrase? (“[I wish you a] good day.”) Why the *-en* on *gut*? (Adjective agreement — masculine, accusative.)

1.7 Morgen — “morning,” hiding in your English *tomorrow*

The morning word — and a straight English cousin again, once you spot it.

What to know first

- Tag — same build ahead: *guten* + this noun.

Sounds you'll need

- **Morgen** = *MOR-gun* — stress the first syllable; the *g* is a hard *g*; the German *r* is soft and guttural; the unstressed *-en* sinks to a soft *-un*.

The word, taken apart — and its English cousins

der Morgen — “the morning” (masculine). Root: Proto-Germanic ***murganaz** — the same root as English **morning**, **morn**, and the *-morrow* in **tomorrow** (“to-morrow” = “at [the] morning [to come]”). No Latin detour; German *Morgen* and English *morning* are the same Germanic word, barely changed.

A small false-friend warning for later: German *Morgen* can also mean “**tomorrow**.” A later farewell will reuse it with that meaning. Context tells the two senses apart; English keeps them in separate words (*morning* vs *tomorrow*), while German lets *Morgen* do both jobs.

Grammar Lens

Morgen is **masculine** (*der Morgen*) — so, like *Tag*, it will take *guten* in the greeting.

Your turn

Say these aloud:

- “der Morgen” — *dair MOR-gen*
- “Morgen” then English “morning”, “tomorrow” — the same root

Before you move on

What English words share *Morgen*’s root? (*morning*, *morn*, *to-morrow*.) *Morgen* is masculine — so “good morning” will use *gut* with which ending? (*guten* — like *guten Tag*.)

1.8 Guten Morgen — good morning

Same assembly as *Guten Tag*, one noun swapped. Nearly free.

What to know first

- Guten Tag · Morgen

The word, taken apart — and its English cousins

Guten Morgen = **gut** (“good”) + **Morgen** (“morning”) = “good morning.” *Morgen* is masculine, exactly like *Tag*, so *gut* takes the same **-en**: *guten* — no new agreement to learn. Said *GOO-ten MOR-gen*. Used in the morning (roughly until midday); after that, German switches to *Guten Tag*. You will build the evening greeting next, from the same familiar pattern.

Your turn

Say these aloud:

- “Guten Morgen” — *GOO-ten MOR-gen*
- “Guten Morgen” then “Guten Tag” — morning, then midday

Before you move on

Why is it *guten* Morgen (same ending as *Guten Tag*)? (*Morgen* is masculine too.)

1.9 Abend — “evening,” cousin of English *eve*

The evening word — a quieter English cousin than the others, but a real one.

What to know first

- Tag — the same *guten* + noun build.

Sounds you'll need

- **Abend** = *AH-bent* — stress the first syllable; a long open *a*; the final *d* hardens to a *t* sound (German de-voices final consonants, exactly as it did to the *-g* of *Tag*).

The word, taken apart — and its English cousins

der Abend — “the evening” (masculine). Root: Proto-Germanic ***ābanþs** — the same root as English **eve** and **even(ing)** (as in *Christmas Eve*, “the eve of...”). English wore it down to *eve*; German kept more of it as *Abend*. Same Germanic word for “the close of the day.”

Contrast worth banking across all four languages:
 “evening” has a *different* root in each branch — Germanic *ābanþs* (German *Abend*, English *eve*), vs Latin *sērus* “late” (French *soir*) and Latin *tardus* “late” (Spanish *tarde*). The Romance pair named it after *lateness*; the Germanic pair named it after the *evening-down* of the day.

Grammar Lens

Abend is **masculine** (*der Abend*) — so, again, *guten* in the greeting. Three masculine day-parts in a row (*Tag*, *Morgen*, *Abend*) all take *guten*. The next day-part is feminine, so it will gently show you a different ending without adding a new rule to memorize now.

Your turn

Say these aloud:

- “der Abend” — *dair AH-bent*
- “Abend” then English “eve”, “evening”

Before you move on

Abend is a cousin of which English words? (*eve*, *evening*.) Is it masculine or feminine? (Masculine — *der Abend*, takes *guten*.)

1.10 Guten Abend — good evening

The evening member of the set. Same *guten*, one more masculine noun.

What to know first

- Guten Tag · Abend

The word, taken apart — and its English cousins

Guten Abend = **gut** + **Abend** (masculine) = “good evening,” *GOO-ten AH-bent*. *guten* again — the third masculine day-part in a row.

You now have the daytime arc: **Guten Morgen** (morning) → **Guten Tag** (midday/afternoon) → **Guten Abend** (evening). All *guten*, all masculine. Only bedtime is left — and it breaks the pattern.

Your turn

Say these aloud:

- “Guten Abend” — *GOO-ten AH-bent*
- the arc — “Guten Morgen, Guten Tag, Guten Abend”

Before you move on

All three day-greetings use *guten* — because their nouns are all which gender? (Masculine.)

1.11 Nacht — “night,” where all four of your languages meet

This is the best cross-language word in the whole chapter. German *Nacht*, English *night*, Spanish *noche*, French *nuit* — **all four are the same word**, traced back far enough. Here’s the family reunion.

What to know first

- der / die / das — *Nacht* is feminine, *die Nacht*.

Sounds you'll need

- **Nacht** = *nahkht* — the **ch** is the guttural *loch* sound: a scrape at the back of the mouth, after the open *a*, and **not** an English *ch*. It is the same throat-scrape as Spanish *j* (*jamón*) and Arabic *kh*. → reference

The word, taken apart — and its English cousins

die Nacht — “the night” (feminine). Root: it goes all the way back to **Proto-Indo-European** ***nókʷts** (“night”) — the deep ancestor of *every* one of your night-words:

Branch	Word
German (Germanic)	Nacht
English (Germanic)	night
Spanish (Latin)	noche
French (Latin)	nuit
(the Latin itself)	<i>noctem</i>

They split apart by each branch’s own sound-laws — Germanic turned the *kt* into *ht* (**Nacht**, **night**; that’s Grimm’s Law), while Latin kept *ct* (*noctem*), which Spanish then softened to *-ch-* (**noche**) and French to *-it-* (**nuit**). Four languages, four rules, one PIE word. When you say *Nacht*, you’re saying the same ancient syllable as *noche* and *nuit*.

Grammar Lens

Nacht is **feminine** — *die Nacht* — inherited from its Germanic gender (and it matches feminine *noche/nuit/noctem*, all feminine too). Its gender matters immediately: it’s why “good night” is *gute Nacht*, not *guten*.

Your turn

Say these aloud:

- “die Nacht” — *dee nahkht*, guttural *ch*
- the family — “Nacht, night, noche, nuit”

Before you move on

Nacht, *night*, *noche*, *nuit* all descend from one PIE word — roughly what? (**nók^wts*, “night.”) Is *Nacht* masculine or feminine? (Feminine — *die Nacht*.)

1.12 Gute Nacht — good night, and the ending that finally changes

The greeting that breaks the *guten* streak — and shows you exactly what German’s endings are tracking.

What to know first

- gut · Nacht

The word, taken apart — and its English cousins

Gute Nacht = **gut** (“good”) + **Nacht** (“night”) = “good night,”
GOO-te nahkht.

Grammar Lens: *gute*, not *guten*

Three greetings in a row were *guten* (Tag, Morgen, Abend — all masculine). This one is *gute*. The reason is the one you set up: *Nacht* is **feminine**, and a feminine noun in the “(I wish you a) good _____” accusative takes the ending **-e**, not **-en**. So the endings line up:

- *guten* Tag / Morgen / Abend — masculine → **-en**
- *gute* Nacht — feminine → **-e**

That single vowel is German’s adjective quietly reporting the noun’s gender — exactly the job *bueno/buena* and *bon/bonne* did in Spanish and French, just with German’s own endings.

Why it’s said this way

Like Spanish *buenas noches* and French *bonne nuit*, *Gute Nacht* is the **bedtime** farewell — “sleep well,” said on parting for the night, not an evening hello (that’s *Guten Abend*). Same split French makes; German

keeps the greeting (*Abend*) and the send-off (*Nacht*) apart.

Your turn

Say these aloud:

- “Gute Nacht” — *GOO-te nahkht*
- “Guten Tag” then “Gute Nacht” — hear *-en* vs *-e*, and say why

Before you move on

Why *gute* Nacht but *guten* Tag? (*Nacht* is feminine, *Tag* masculine — the ending agrees.) Is *Gute Nacht* a greeting or a bedtime farewell? (Bedtime farewell.)

1.13 die — one article for every plural

You have learned three words for “the,” one per gender. Here is the relief: in the plural there is only ever **one**.

You’ll want to know: *die* for every plural

Singular: **der** Tag · **der** Morgen · **der** Abend · **die** Nacht
 Plural: **die** Tage · **die** Morgen · **die** Abende · **die** Nächte

Whatever the noun’s gender, the plural article is **die**. *der* → *die*, *das* → *die*, *die* → *die*. Three genders in the singular collapse to one form in the plural — German, like French with *les*, spends a single article on every plural noun there is.

Sounds you’ll need

Many German plurals bend the vowel as well as adding an ending. *Nacht* → *Nächte*: the open *a* of *nahkht* is fronted to **ä**, the vowel of English *bed*, so *Nächte* is *NEKH-tuh*. That two-dot mark is called an **umlaut**, and the vowel change it writes down is one of German’s regular plural signals.

Grammar Lens: the four day-parts in the plural

singular	plural	what changed
der Tag	die Tage	article, plus <i>-e</i>
der Morgen	die Morgen	article only — the noun is unchanged
der Abend	die Abende	article, plus <i>-e</i>
die Nacht	die Nächte	article, plus <i>-e</i> , plus the umlaut <i>a</i> → <i>ä</i>

German plurals are not built from one rule the way English adds *-s*. Each noun carries its own plural, which is why a German noun is worth learning as a set of three: *der Tag*, *die Tage*. The one thing that never varies is the article.

Your turn

Say these aloud:

- “der Tag, die Tage” — singular, then plural
- “der Abend, die Abende”
- “die Nacht, die Nächte” — hear the *a* bend to *ä*
- “der Morgen, die Morgen” — only the article moved

Before you move on

Which article do German plurals take? (**die** — always, whatever the gender.) Which of the four day-parts looks the same in the plural? (*Morgen* — *der Morgen*, *die Morgen*.) What changed in *Nächte* besides the ending? (The vowel — *a* took an umlaut and became *ä*.)

1.14 Practice — the German greetings

No new words — just the day’s arc, until the endings are automatic.

What you've built

- **hallo** — casual “hi” (a *real* cousin of English “hello”).
- **gut** — “good” and “well” (← Germanic **gōdaz* = English *good*; the d→t shift).
- **der / die / das** — “the,” and German’s *three* genders (kept the neuter).
- **Guten Morgen** → **Guten Tag** → **Guten Abend** — the daytime arc, all *guten* (masculine nouns).
- **Gute Nacht** — bedtime farewell, *gute* because *Nacht* is feminine.

Two threads: **register** (*hallo* vs *Guten Tag*) and **agreement** (*guten* for masculine day-parts, *gute* for feminine *Nacht*). And one big idea: German words are **direct Germanic cousins of English**, reshaped by the High German Consonant Shift (*good*→*gut*, *day*→*Tag*, *that*→*das*).

Your turn

Say these aloud:

- greet a friend casually, then politely — *hallo* / *Guten Tag*
- the right greeting for right now — morning/day/evening
- “Guten Tag” then “Gute Nacht” — and say why the ending changes
- three shift-cousins — *gut*/good, *Tag*/day, *das*/that

Twice through: Run *Guten Morgen* → *Guten Tag* → *Guten Abend* → *Gute Nacht* without hesitating on *guten/gute*.

Before you move on

Which German greeting uses *gute*, not *guten*, and why? (*Gute Nacht* — *Nacht* is feminine.) Next chapter, you will learn to introduce yourself and then build the friendly and respectful ways to address someone.

Chapter 2

Introducing Yourself

Modes: 🗣️ voice (10) 🗣️ Hands-free start: all 10 lessons.

By the end of this chapter: I can introduce myself in German, give my name, and understand the other person's name.

Now a first real exchange — giving your name, asking for someone else's, and saying you are glad to meet them: Ich heie Mira. — Wie heien Sie? — Ich heie Arun. — Freut mich. It is built the way the greetings were: each piece taken apart first, then assembled — and, because German is English's sibling, most of those pieces are direct English cousins. GE-C02-practice puts the four lines back together at the end.

2.1 ich — “I,” the same ancient word as Latin *ego*

To introduce yourself, first “I.” German's is a three-letter word hiding a very deep root.

Sounds you'll need

- **ich** = *ikh* — the *ch* here is **soft**: a light hiss at the front of the mouth (the “ich-sound”), *not* the throat-scrape of *Nacht*. German has both; after *i* and *e* it's the soft one.

The word, taken apart — and its English cousins

ich — “I.” Root: Proto-Germanic ***ik**, from Proto-Indo-European ***eǵ** — the *same* deep root that became:

- Latin **ego** (and English **ego**), Greek *egō*,
- and, worn down hardest of all, English **I**.

So German *ich*, Latin *ego*, and English *I* are three survivals of **one** ancient word for “I” — English filed it down to a single letter, German kept a bit more.

Your turn

Say these aloud:

- “ich” (*ikh*, soft *ch*)
- the three cousins — *ich* / *ego* / *I*

Before you move on

What PIE root gave **ich**, and what Latin and English words are its cousins? (**eǵ* — Latin *ego*, English *I*.) Which *ch* sound does *ich* use — soft or the *Nacht* scrape? (The soft “ich-sound.”)

2.2 du / Sie — “you,” familiar and formal

To ask someone’s name you need “you” — and German’s formal one is the strangest of all the languages here.

Sounds you’ll need

- **du** = *doo* (long *u*, as in *boot*). **Sie** = *zee* (the *s* is a *z*-sound at the start).

The word, taken apart — and its English cousins

du (familiar “you”) ← Proto-Germanic ***þū**, from PIE ***tū** — the *same* root as:

- English archaic **thou**, Latin **tū**, French **tu**.

English kept *thou* only in old prayers and some dialects; German uses *du* every day.

Grammar Lens: two “you”s — and German’s is the odd one out

- **du** — friends, family, children, peers. Intimate, equal.
- **Sie** — the respectful “you,” for strangers and elders.

Here’s the twist: **Sie** is really the word for “**they**” (*sie*), promoted to a polite “you” and always **Capitalized** (*Sie*) to tell it apart from *sie* = “they/she.” So German is polite by addressing you in the **third person plural** — as if saying “might *they*...” about you to your face. Three languages, three escapes from the blunt “you”:

- Spanish coined **usted** (“your grace”),
- French uses the **2nd-person plural** *vous* (“you all”),
- German borrows the **3rd-person plural** *Sie* (“they”).

When unsure, use **Sie**.

Your turn

Say these aloud:

- “du” (*doo*), “Sie” (*zee*)
- who gets *du* (friends), who gets *Sie* (strangers, elders)
- what *Sie* literally is (capitalized “they,” used as polite “you”)

Before you move on

What is the formal **Sie** literally, and why capitalized? (It’s “they,” *sie*, promoted to polite “you”; capitalized to distinguish it.) What old English word was the lost *du*? (*thou*.)

2.3 heißen — “to be called,” the verb English almost lost

German gives its name with one plain verb — *heißen*, “to be called.” No “myself” needed, unlike the Romance languages.

Sounds you'll need

- **heißen** = *HY-ssen*. The **ß** (*Eszett*) is just a sharp “ss.” **ei** is the vowel of English *eye*. So **heiße** = *HY-ssuh*.

The word, taken apart — and its English cousins

heißen — “to be called / to be named.” Root: Proto-Germanic ***haitana**. English *had* this verb:

- **hight**, “named” — now archaic (“a knight *hight* Gawain”), and
- **behest**, “a command” — literally something *called for*.

So German kept as an everyday word a verb English let fade to poetry. And where Spanish and French say “I call *myself*” (a reflexive), German uses *heißen* as a plain verb of **being** called — no “myself” at all.

Your turn

Say these aloud:

- “heißen” (*HY-ssen*)
- the English fossil — *hight* (“named”), *behest*

Before you move on

What does **heißen** mean, and what archaic English word is its cousin? (“To be called”; *hight*.) How is German’s way of giving a name different from Spanish/French? (A plain verb “to be called,” no reflexive “myself.”)

2.4 heißen with a person on the front — one verb, three endings

You have the verb and you have the people. *heißen* is the form a dictionary prints; it is not the form you say. Put a person in front of it and the tail of the word moves.

Grammar Lens: one verb, changing its ending

heißen is the dictionary (infinitive) form. German swaps the ending for each person:

- **ich heiße** — I am called
- **du heißt** — you (familiar) are called
- **Sie heißen** — you (formal) are called

That ending-swap is the same machine on every German verb. You'll use *ich heiße* and *Sie heißen* in the next lessons.

Your turn

Say these aloud:

- the three forms — *ich heiße* / *du heißt* / *Sie heißen*
- the infinitive, then the *ich* form — *heißen*, *ich heiße*
- the tails alone — *-e*, *-t*, *-en*

Before you move on

Which ending goes with *ich*? (*-e* — *ich heiße*.) With formal *Sie*? (*-en* — *Sie heißen*, the same as the dictionary form.) Is this ending machine special to *heißen*? (No — every German verb runs it.)

2.5 **ich heiße...** — “my name is...,” literally “I am called”

Assemble the two pieces — *ich* and *heißen* — into the sentence you need for meeting anyone.

You'll want to know: **ich heiße...**

- **ich** (I) + **heiße** (am called).

ich heiße... = word for word “I am called...” = “**my name is...**”

Ich heie Arun. → “My name is Arun.” *Ich heie Mira.* → “My name is Mira.”

Why it’s said this way

German also has the literal “my name is”:

- **mein Name ist...** — where **Name** ← Proto-Germanic ***namō**, the *same* root as English **name** and Latin **nōmen** (→ English **noun**, **nominate**). It’s correct and common.

But **ich heie** is warmer and more idiomatic — German prefers the **verb** (“I am called”) over the **noun** phrase (“my name is”). (Note **Name** is Capitalized: German capitalizes *every* noun — you’ll see it on every naming word.)

Your turn

Say these aloud:

- “ich heie...” then your own name
- what it literally says (“I am called”)
- the literal alternative — “mein Name ist...”

Before you move on

What does **ich heie** literally mean? (“I am called.”) What’s the more literal “my name is,” and what English words is *Name* cousin to? (*mein Name ist*; *name*, *noun*.)

2.6 wie — “how,” cousin of English *how*

German asks “what’s your name?” as “**how** are you called?” — so first, “how.”

Sounds you’ll need

- **wie** = *vee*. Two traps: German **w** is an English *v*, and **ie** is a long *ee*. So *wie* sounds like English “vee,” never “wy.”

The word, taken apart — and its English cousins

wie — “how.” Root: Proto-Germanic ***hwī**, from the PIE interrogative root ***k^wo-** — the very root behind the English **wh**-words:

- **how, what, who, why** — and, through Latin, the **qu-** of *question, quantity*, and the *quo modo* that became French *comment*.

German *wie* and English *how* are the same question-word, lightly reshaped.

Grammar Lens: German counts names as a matter of “how”

Like French, German asks a name with “**how**,” not “what”: *wie heißen Sie?* is literally “*how* are you called?” — about the *manner* of your being called. Don’t translate word for word; learn the logic: the name-question runs on **wie**.

Your turn

Say these aloud:

- “wie” (*vee* — *w* is *v*, *ie* is *ee*)
- the English *wh*-cousins — how, what, who, why
- “how are you called?” is the German for “what’s your name?”

Before you move on

How is **wie** pronounced, and what English question-words share its root? (*vee*; how / what / who / why.) English asks “what is your name?” — what does German literally ask? (“*How* are you called?”)

2.7 wie heißen Sie? — “what’s your name?”

Assemble it: “how” + “are you called” = the polite question that opens the introduction.

You'll want to know: wie heißen Sie?

- **wie** (how) + **heißen Sie** (“are you [formal] called”).
wie heißen Sie? = literally “how are you called?” = the polite “what’s your name?”

Grammar Lens: verb in second place

German likes the verb in the **second** slot of a sentence:

Wie (1) heißen (2) Sie?

The **informal** version swaps in *du* and its ending:

Wie heißt du?

So the one verb *heißen* runs the whole exchange: *ich heiße...* to give your name, *wie heißen Sie?* to ask for someone else’s. (Reply to *wie heißen Sie?* with *Ich heiße...*)

Your turn

Say these aloud:

- “wie heißen Sie?” (formal)
- the informal — “wie heißt du?”
- the pair — ask, then answer: “wie heißen Sie?” / “ich heiße...”

Before you move on

What does **wie heißen Sie?** literally say? (“How are you called?”)
 What’s the informal version, and where does German put the verb?
 (*Wie heißt du?*; the verb goes second.)

2.8 mich — “me,” the same word as *ich*, doing a different job

English does not say “gladdens I.” It says “gladdens **me**.” German makes the same move, and the next phrase you learn needs it.

You'll want to know: mich

mich — “me,” the object form of *ich*.

Said *mikh*: the final **ch** is the soft ich-sound you already met in *ich*, not the throat-scrape of *Nacht*.

The word, taken apart — and its English cousins

mich (“me,” the object form) ← Proto-Germanic ***mek**, from PIE ***me-** — the *same* first-person root as English **me**, **my**, **mine** (and the French *me* in *je m'appelle*). So German *mich*, English *me*, and French *me* are three cousins of one ancient word for “me.” And just as English shifts **I** (subject) → **me** (object), German shifts **ich** → **mich**.

Your turn

Say these aloud:

- “ich” then “mich” — subject, then object
- the three cousins — *mich* / *me* / *me*
- “mich” (*mikh*, soft *ch* — not the *Nacht* scrape)

Before you move on

What is *mich*, and what is its subject form? (“Me”; *ich*.) Which English pair does *ich* → *mich* match? (*I* → *me*.) Which *ch* does *mich* use? (The soft ich-sound.)

2.9 freut mich — “pleased to meet you,” i.e. “it gladdens me”

The warm close to an introduction — and it literally says the meeting makes you glad.

Sounds you'll need

- **freut mich** = *froyt mikh*. **eu** is the vowel of English *boy*; the final **ch** is the soft ich-sound again (from *ich*).

The word, taken apart — and its English cousins

freut mich is short for **es freut mich (Sie kennenzulernen)** — “it gladdens me (to get to know you).” The verb **freuen** (“to gladden”) sits on **froh** (“glad, joyful”):

- the same **froh** in **Frohe Weihnachten** (“Merry Christmas”), and a cousin of English **frolic** (via Dutch *vrolijk*, “merry”).

So *freut mich* says, warmly, “this makes me glad.”

Grammar Lens: “it gladdens *me*”

German literally says “[it] gladdens **me**” — the *meeting* is what does the gladdening, and you (**mich**) are on the receiving end. Two common variants: **sehr erfreut** (“much pleased”) and the plain **angenehm** (“pleasant / agreeable”), both usable as “pleased to meet you.”

Your turn

Say these aloud:

- “freut mich” (*froyt mikh*)
- the root — *froh* (“glad”), as in *Frohe Weihnachten*
- a variant — “sehr erfreut” or “angenehm”

Before you move on

What does **freut mich** literally mean, and on what word is *freuen* built? (“It gladdens me”; *froh*, “glad.”) What does *mich* mean in it? (“Me” — the meeting gladdens *me*.)

2.10 Chapter 2 — the introduction, whole

Every piece is built. Here’s the exchange it was all for.

The exchange

German	English
<i>Ich heie Mira.</i>	My name is Mira.
<i>Wie heien Sie?</i>	What’s your name?
<i>Ich heie Arun.</i>	My name is Arun.
<i>Freut mich.</i>	Pleased to meet you.

Every piece a Germanic cousin of English:

- **ich** ← **ik* (English *I*, Latin *ego*)
- **mich** ← **mek* (English *me*, *my*, *mine*)
- **heien** ← **haitanq* (English *hight*, *behest*)
- **wie** ← **hwī* (English *how*, *what*, *who*)
- **freuen** ← *froh* (glad; English *frolic*)

And two habits of German to keep: it names with a **plain verb of being called** (“I am called,” no “myself”), and it is polite by the **third person** (*Sie* = “they”).

Your turn

Say these aloud:

- the whole exchange, both voices
- your own introduction — “ich heie ..., freut mich”
- ask it back — “wie heien Sie?”

Before you move on

Give your name in German, ask someone else’s, and say you’re pleased to meet them. (*Ich heie...* / *Wie heien Sie?* / *Freut mich.*) What two German habits does this show? (Naming with a plain “to be called” verb; politeness by the third person, *Sie*.) Next chapter: *Wie geht’s?* (“how’s it going?”) and answering with *gut* again — the responding cycle.

Chapter 3

How Are You?

Modes: 🗣️ voice (17) 👁️ eyes (1) 🖱️ Hands-free start: first 5 of 18 lessons.

By the end of this chapter: I can ask how someone is in German, answer naturally, and return the question.

German asks after someone with a verb of motion — Wie geht es dir?, “how goes it to you?” — so this chapter builds that question one word at a time and then answers it across a full ladder, from Sehr gut! down through Es geht and So lala to Nicht so gut. Around it sit the two courtesies that hold every German conversation together, danke and bitte, each an English word in disguise. GE-C03-formal-practice runs the finished exchange in the formal register, where only the listener word changes.

3.1 danke — “thank you,” which is really “I think of you”

You can introduce yourself in German. Next comes *how are you?* — and every answer to it leans on one word. It hides a secret that English shares and hides too: **to thank is to think.**

You’ll want to know: danke

danke — “thank you.”

Sounds you'll need

- **vowel-a-german** — *DAHN-kuh*: a pure open *ah*, the vowel of English *father*, and a final *-e* that sinks to a soft *uh* rather than disappearing. Stress the front: *DAHN-kuh*.

The word, taken apart — and its English cousins

danke comes from **denken**, “to think.” The old idea: to thank someone is to **keep them in mind** — “I think of you,” “you are in my thoughts.” German *Dank* (“thanks”) and *Gedanke* (“a thought”) are the same root wearing two coats.

And here is the payoff for an English speaker: **English “thank” and “think” are the same word too.** Old English *þancian* (“thank”) and *þencan* (“think”) split from one root — to thank was to *hold in thought*. So *danke* is not foreign at all; it is English **thank** with the **think** still visible inside it.

Three different pictures of gratitude, worth holding side by side:

Language	“Thanks”	Literal idea
German	<i>danke</i>	“I think of you”
French	<i>merci</i>	a reward , a mercy
Spanish	<i>gracias</i>	grace , favour

Your turn

Say these aloud:

- “danke” — *DAHN-kuh*, stress the front
- “danke” then “denken” — thanks, and the thinking inside it
- English “thank” then “think” — one root, two coats

Before you move on

What everyday verb is *danke* built from? (*Denken*, “to think.”)

What two English words share that same split? (*Thank* and *think*.)

Where does the stress fall? (On the front: *DAHN-kuh*.)

3.2 schön — “beautiful,” and your first umlaut with rounded lips

Danke on its own is complete and polite. But German has a one-word upgrade, and the upgrading word is worth having on its own — it is one of the commonest adjectives in the language.

You’ll want to know: schön

schön — “beautiful, lovely, nice.”

Sounds you’ll need

- **umlaut-oe** — **ö** is made by saying **ay** and then *rounding your lips* as if to whistle, without moving your tongue. English has no such vowel, so build it from two things you can already do: hold the *e* of *bed*, then push your lips forward into an *o* shape. That is **ö**.
- **sch-sh** — **sch** is simply English **sh**. So *schön* is *shurn* — with no *r* actually sounded, the way a Southern English speaker says *fern*.

The word, taken apart — and its English cousins

schön is English **sheen**. Both come from a Germanic root meaning *bright, shining* — so the oldest sense of *schön* is not “pretty” but “gleaming,” and English kept the shine while German took the beauty. Now snap it onto the word you already have:

danke schön — “thank you nicely” → “thank you very much.”

Literally you are thanking someone *beautifully*. English has no equivalent move; the nearest is the tone of voice in “thanks *so* much.”

Your turn

Say these aloud:

- “ay” then round your lips — “ö”
- “schön” (*shurn*)
- “danke schön” — thank you very much

Before you move on

What does *schön* mean, and which English word is it? (“Beautiful”; *sheen*.) How do you make *ö*? (Say *ay*, then round the lips.) Upgrade a thank-you. (*Danke schön*.)

3.3 vielen Dank — “many thanks,” with the noun stepping forward

Danke is a verb form — “I thank.” But English also has a *noun*, **thanks**, and so does German. Meet it, and a second upgrade opens up.

You’ll want to know: der Dank

der Dank — “the thanks, the gratitude” (masculine).

Capital **D**, because every German noun is capitalised — the rule from *Tag*. Said *dahnk*, with the final **k** crisp.

The word, taken apart — and its English cousins

viel means “much,” and it is English **full** — a full measure of something. Put it in front of *Dank* and you get the phrase Germans reach for when *danke* alone feels too thin:

vielen Dank — “many thanks.”

The **-en** on *vielen* is the same kind of adjective ending you met on *guten Tag*: German adjectives dress to match their noun. You do not have to build it yet — learn *vielen Dank* whole, the way you learned *guten Tag* whole.

So the family now reads: *danke* (I thank) · *der Dank* (the thanks) · *Gedanke* (a thought) — all from *denken*, “to think.”

Your turn

Say these aloud:

- “der Dank” — the noun, capital D

- “vielen Dank” — many thanks
- the family — “danke”, “Dank”, “denken”

Before you move on

What is the noun behind *danke*? (*Der Dank*.) What English word is *viel*? (*Full* — a full measure.) Say “many thanks.” (*Vielen Dank*.)

3.4 bitte — the Swiss-army word: “please” *and* “you’re welcome”

Every *danke* wants an answer. German’s answer is a word that also means “please” — and three other things besides, all from one idea.

You’ll want to know: bitte

bitte — “please,” and “you’re welcome.”

Sounds you’ll need

- **i-short** — *BIT-tuh*: a short crisp *i* as in English *bit*, a clearly doubled *t*, and the soft *-uh* ending you already met on *danke*.

The word, taken apart — and its English cousins

bitte is the asking-form of **bitten**, “to ask, to request, to pray.” When you say *bitte* you are, at root, **making a request** — “I ask this of you.”

That verb is a close cousin of two English words:

- **bid** — as in “I *bid* you welcome,” “do as you are *bidden*”: to ask or command.
- **bead** — astonishingly, yes. A *bead* was originally a **prayer**. People counted their prayers (Old English *gebed*) on a string, and the name of the prayer slid onto the little ball it was counted on. A rosary **bead** is a frozen request — exactly what *bitte* still is.

That single idea, *I ask*, is what lets one word cover so much ground:

You say <i>bitte</i> when...	It means	Why it is all “I ask”
making a request	please	“I ask you...”
answering <i>danke</i>	you’re welcome	“I ask nothing back”
handing something over	here you go	“I offer, at your request”
you did not hear	pardon?	“I ask you to repeat”
Tone does the sorting. The word never changes.		

Why it’s said this way

The courtesy loop closes every small favour in German: **Danke.** — **Bitte.** It is the twin of Spanish *de nada* and French *de rien*, and leaving off the *bitte* sounds curt in a way English “no problem” does not.

Your turn

Say these aloud:

- “bitte” — *BIT-tuh*, doubled *t*
- the loop — “danke” ... “bitte”
- “bitte” as *please*, then as *you’re welcome* — same word, new tone

Before you move on

What verb is *bitte* from? (*Bitten*, “to ask, to pray.”) What two English words are its cousins? (*Bid*, and *bead* — a bead was a prayer.) Name two jobs *bitte* does. (Please; you’re welcome; here you go; pardon?) What answers *danke*? (*Bitte.*)

3.5 gehen — “to go,” and it is just English *go*

German asks “how are you?” with a verb of **motion**. You already own that verb without having studied it, because it *is* English *go*.

You'll want to know: **gehen**

gehen — “to go.” The form you will need most is **geht**, “goes.”

That **-t** is the ending you already met on *heißt*: third person, one person, one *t*.

Sounds you'll need

- **h-silent-lengthening** — in *gehen* the **h** is **not** breathed. It is a silent letter whose whole job is to **stretch the vowel before it**: *GAY-en*, not *ge-HEN*. So **geht** is simply *gayt*.

This is worth banking now, because German uses the trick everywhere — *sehr*, *Ihnen*, *Jahr* all hide a lengthening *h*.

The word, taken apart — and its English cousins

gehen and English **go** descend from the *same* Germanic verb — no Latin detour, no false friend, a straight cognate. When you say *geht*, you are saying *goes*.

And that is the whole idea behind German's “how are you?": wellbeing is not something you *are*, it is something that **goes**.

Language	The verb it asks with	The picture
German	<i>gehen</i> , “to go”	how does it go ?
French	<i>aller</i> , “to go”	how does it go ?
Spanish	<i>estar</i> , “to stand”	how are you standing ?

Two of the three put wellbeing in motion; Spanish puts it on its feet.

Your turn

Say these aloud:

- “gehen” (*GAY-en*) — the *h* only stretches
- “geht” (*gayt*) — “goes”
- German *gehen* and English *go* — the same word

Before you move on

What English word is *gehen*? (*Go* — a straight cognate.) What does the *h* do in *gehen*? (Nothing but lengthen the vowel.) Which two of the three languages ask “how are you?” with “to go”? (German and French; Spanish uses “to stand.”)

3.6 es — “it,” the small word German leans on

You have the verb: *geht*, “goes.” But goes *what*? German needs a subject, and for a state — the weather, your day — it reaches for one tiny word.

You’ll want to know: es

es — “it.”

Said *ess*: a short clean *e*, the vowel of English *bet*, and a crisp *s*.

The word, taken apart — and its English cousins

es is English **it**. The two look unlike only because of the same swap you already met in *das* / *that*: where English keeps a **t**, German often shows an **s**. Line them up and the pattern is one column wide:

English	German
that	das
it	es
what	was

Same word, one consonant apart — and *das*, the neuter “the,” is *es*’s close relative, which is why both point at things rather than people.

Your turn

Say these aloud:

- “es” (*ess*) — “it”
- “it” then “es”; “that” then “das” — the same t/s swap, twice
- “es geht” — “it goes”

Before you move on

What is *es*? (“It.”) Which English consonant turns up as *s* in German? (*T* — *it/es*, *that/das*, *what/was*.) Say “it goes.” (*Es geht*.)

3.7 mir — “to me,” the third coat that *ich* wears

You have *ich* (“I,” the doer) and *mich* (“me,” the done-to). German keeps a **third** form for a different job — and English keeps the same job without a special word for it.

You’ll want to know: mir

mir — “to me, for me.”

Said *meer*: a long *ee*, and a soft German **r** at the end that is barely more than a vowel — closer to *mee-uh* than to an English *meer*.

The word, taken apart — and its English cousins

German marks *the person something happens to* with a form of its own. It is called the **dative** — the “to-whom” form.

Job	German	English
the doer	<i>ich</i>	I
the done-to	<i>mich</i>	me
the to-whom	<i>mir</i>	to me

English merged the last two into one word, *me*, and now signals the difference by **word order** instead: “she gave **me** the book” — *me* is the to-whom there, even though it looks identical to the done-to *me* in “she saw me.” German never merged them, so it can put the to-whom anywhere and still be clear.

That is why wellbeing works the way it does: something *goes*, and it goes **to a person**. The person is in the dative.

Your turn

Say these aloud:

- the three coats — “ich”, “mich”, “mir”

- “mir” (*meer*) — “to me”
- “es geht mir” — “it goes to me”

Before you move on

What does *mir* mean? (“To me, for me.”) Which of *ich* / *mich* / *mir* is the to-whom form? (*Mir*.) How does English show that job instead? (By word order — “gave *me* the book.”)

3.8 dir — “to you,” and English used to have it too

Mir is “to me.” To ask how someone else is doing, you need the same form pointed the other way.

You’ll want to know: dir

dir — “to you,” the to-whom form of *du*.

Said *deer*, with the same soft trailing **r** as *mir*. The two rhyme, which is the easiest way to remember they are a pair.

The word, taken apart — and its English cousins

dir is English **thee** — the old to-you form, from the same Germanic root, with the *th* hardened to *d* exactly as *das* answers *that*. English has not lost it entirely. It is fossilised in old phrases: “I give **thee** thanks,” “woe is **thee**.” Those are datives — *thee* was never the doer, always the to-whom, which is precisely *dir*’s job. So the pattern completes itself:

doer	to-whom
<i>ich</i>	<i>mir</i>
<i>du</i>	<i>dir</i>

Remember: *dir* belongs to *du*, so it is for friends and family. A stranger gets a different word, and that is the next lesson.

Your turn

Say these aloud:

- “mir” then “dir” — they rhyme
- “du” then “dir” — doer, then to-whom
- “dir” and English “thee” — the same word

Before you move on

What does *dir* mean? (“To you.”) Which English word is it? (*Thee*.) Whom do you say *dir* to? (Someone you call *du* — a friend or family.)

3.9 Wie geht es dir? — “how are you?”

Nothing new is coming. You have all four words — *wie*, *geht*, *es*, *dir*. This lesson only puts them in order.

You’ll want to know: Wie geht es dir?

Wie geht es dir? — “How are you?”

Word for word: “How goes it to you?”

German	English
<i>wie</i>	how
<i>geht</i>	goes
<i>es</i>	it
<i>dir</i>	to you

Said *vee gayt es deer* — remember German **w** says *v*, and *ie* is a long *ee*.

Every piece has been earned: *wie* from asking someone’s name, *geht* from *gehen*, *es* and *dir* from the last two lessons. This is what the book has been building toward — a real question assembled from parts, not memorised whole.

You’ll want to know: Wie geht’s?

In speech, *geht es* crushes together into **geht’s**:

Wie geht’s? — the form you will actually hear.

It drops the *dir* entirely, which makes it neutral: no need to decide between friend and stranger. When in doubt, this is the safe one.

And you can already answer it:

Wie geht's? — Danke, gut!

Your turn

Say these aloud:

- “Wie geht es dir?” — *vee gayt es deer*
- the four pieces — “wie”, “geht”, “es”, “dir”
- the short form — “Wie geht's?”
- the whole exchange — “Wie geht's?” ... “Danke, gut!”

Before you move on

What does *Wie geht es dir?* say word for word? (“How goes it to you?”) What contracts into *geht's?* (*Geht es.*) Why is *Wie geht's?* the safe form? (It drops *dir*, so it needs no friend-or-stranger choice.)

3.10 Ihnen — “to you,” said at a respectful distance

Dir is for a friend. But you already know German splits its “you” in two, and the polite half needs its own to-whom form.

You'll want to know: Ihnen

Ihnen — “to you,” formal.

Said *EE-nen*: the **h** is silent and merely stretches the *i* into a long *ee*, the same trick as in *gehen*. Stress the front.

The word, taken apart — and its English cousins

Ihnen is, underneath, “to **them**.” German’s polite “you” is the third-person plural borrowed wholesale: rather than address you directly, the language speaks of you as though you were a group —

distance as respect. *Sie* is “they” used as “you”; *Ihnen* is “to them” used as “to you.”

The capital letter is doing real work. Written small, *ihnen* means “to them” about actual other people. Written **Ihnen**, it is aimed at the person you are speaking to. Same sound, and only the page can tell them apart.

to whom	informal	formal
you	<i>dir</i>	<i>Ihnen</i>

Your turn

Say these aloud:

- “Ihnen” (*EE-nen*) — long *ee*, silent *h*
- “dir” then “Ihnen” — friend, then stranger
- “Sie” and “Ihnen” — the polite pair

Before you move on

What does *Ihnen* mean? (“To you,” formally.) What does it literally say? (“To them.”) What does the capital **I** tell you? (It is aimed at the listener, not at other people.)

3.11 Wie geht es Ihnen? — the same question, at a distance

You have the question for a friend, and you have the formal to-whom word. Putting them together needs no new grammar at all — just a swap.

You’ll want to know: **Wie geht es Ihnen?**

Wie geht es Ihnen? — “How are you?”, to a stranger or an elder.

Listener	Question
friend, family	<i>Wie geht es dir?</i>
stranger, elder	<i>Wie geht es Ihnen?</i>

Three of the four words never move. Only the last one changes.

Grammar Lens: politeness lives in the pronoun

This is a rule worth generalising: **German carries politeness in the pronoun, not in the sentence.** English reaches for extra words to be polite — “I was wondering whether you might...” — and stacks them in front. German usually leaves the sentence exactly as it is and changes *who you are calling the person*.

You saw the same move with *du* and *Sie*. Here it reaches the dative: *dir* becomes *Ihnen*, and the politeness is done.

And when you would rather not choose at all, the contraction sidesteps it: **Wie geht's?** names no listener, so it commits to nothing.

Your turn

Say these aloud:

- to a friend — “Wie geht es dir?”
- to a stranger — “Wie geht es Ihnen?”
- the pair back to back, hearing only the last word change
- the neutral escape — “Wie geht's?”

Before you move on

What is the formal “how are you?” (*Wie geht es Ihnen?*) How many words change from the informal? (One — *dir* to *Ihnen*.) Where does German keep its politeness? (In the pronoun, not in extra words.)

3.12 sehr — “very,” and it used to mean “sorely”

Gut answers “how are you?” perfectly well. One small word in front of it turns a polite answer into a warm one.

You'll want to know: sehr

sehr — “very.”

Said *zair*: German **s** before a vowel buzzes like English **z**, the **h** is silent and stretches the vowel, and the **r** softens almost to *ah*.

Sehr gut! — “Very well!”

The word, taken apart — and its English cousins

sehr is English **sore**. In Middle High German it meant *painfully*, *grievously* — and intensifiers very often start life as words for pain, then fade into pure degree. English did exactly the same thing and then half forgot: “**sorely** missed,” “**sore** afraid” both mean *very*, not *painful*.

So *sehr gut* is, at the root, “sorely good” — and English *very* went the same road from a different start, having once meant *truly* (French *vrai*).

Your turn

Say these aloud:

- “sehr” (*zair*) — buzzing **z**, silent **h**
- “sehr gut” — very well
- “danke sehr” — thanks very much

Before you move on

What does *sehr* mean? (“Very.”) Which English word is it? (*Sore* — as in “sorely missed.”) Answer warmly. (*Sehr gut!*)

3.13 nicht — “not,” the same word as English *naught*

Not every day is a good one. To say so, you need the one word that turns any German sentence around.

You'll want to know: nicht

nicht — “not.”

Said *nikht*: the **ch** is the soft ich-sound from *ich* and *mich*, not the throat-scrape of *Nacht*. The vowel before it is short.

The word, taken apart — and its English cousins

nicht and English **not** are one word. Both come from a Germanic phrase meaning *no thing at all* — literally “not a whit.” English shows the longer form still: **naught** (and **nought**, the zero) is the undressed version, and *not* is what happens when centuries of fast speech wear it down.

So the pair lines up with the *ch* rule you already have:

English	German
naught	nicht
night	Nacht

That English *gh* is a fossil: it once *was* the German *ch* sound, and English stopped pronouncing it while keeping the letters.

Now the answer ladder reaches downward:

Nicht so gut. — “Not so good.”

Your turn

Say these aloud:

- “nicht” (*nikht*) — soft *ch*
- “naught” then “nicht”; “night” then “Nacht”
- “nicht so gut” — not so good

Before you move on

What does *nicht* mean? (“Not.”) Which English word is it, undressed? (*Naught*.) What does English *gh* used to be? (The German *ch* sound.)

3.14 so lala — “so-so,” and the tune carries it

You can now say *gut* and *nicht so gut*. Between them sits the honest middle, and German fills it with a word that means nothing whatsoever.

You’ll want to know: so lala

so lala — “so-so, middling, could be worse.”

Said *zo LAH-lah*, with the voice rising and falling across the *lala* — a shrug set to music. Say it flat and it lands wrong; the tune is most of the meaning.

The word, taken apart — and its English cousins

There is nothing to take apart, and that is the point. **so** is English **so**. **lala** is not a word at all — it is the same *lalala* you hum when you do not know the lyrics, pressed into service as a meaning. This is not a German quirk. Reach for “so-so” in almost any language and you find a small repeated noise doing the work, because a shrug is easier to sing than to say.

Why it’s said this way

The shrug collection, four deep across the books in this series:

Language	The shrug	Literally
German	<i>so lala</i>	“so la-la”
French	<i>comme ci, comme ça</i>	“like this, like that”
Spanish	<i>más o menos</i>	“more or less”
Italian	<i>così così</i>	“so so”

Three of the four work by **repetition** — say a small thing twice and it comes out meaning *neither one nor the other*.

Your turn

Say these aloud:

- “so lala” with the tune — up, then down
- the ladder — “sehr gut”, “gut”, “so lala”, “nicht so gut”

- the four shrugs — *so lala*, *comme ci comme ça*, *más o menos*, *così così*

Before you move on

What does *so lala* mean? (“So-so.”) What does *lala* mean on its own? (Nothing — it is pure sing-song.) What do three of the four shrugs have in common? (They repeat a small word.)

3.15 *es geht* — the German shrug: “it goes”

Someone asks *Wie geht's?* You are neither great nor terrible. German has an answer for exactly that, and it is made of two words you already own.

You’ll want to know: *es geht*

es geht — “it goes.” → “So-so. I’m getting by.”

Nothing has been added. That is the whole trick.

Es geht mir gut says it goes **well**. Take the *gut* away and German does not become vague — it becomes *pointed*. The listener was waiting for a *gut* or a *schlecht*, and you gave neither. The **absence** is the meaning.

English does this too, with tone rather than deletion: “It’s... going.”

Grammar Lens: the answer ladder

You now hold the whole range, top to bottom, with no word left unexplained:

Answer	Sense
<i>Sehr gut!</i>	very well
<i>Gut, danke.</i>	well, thanks
<i>Es geht.</i>	so-so, getting by
<i>So lala.</i>	so-so, sung with a shrug
<i>Nicht so gut.</i>	not so well

Es geht and *so lala* sit on the same rung and differ only in mood: *es geht* is dry and a little stoic, *so lala* is light and musical. Choose by the face you want to make.

Your turn

Say these aloud:

- “es geht” — flat, unhurried
- “es geht mir gut”, then just “es geht” — hear the *gut* go missing
- the ladder top to bottom — “Sehr gut”, “Gut danke”, “Es geht”, “So lala”, “Nicht so gut”

Before you move on

What does *es geht* mean literally, and in use? (“It goes”; “so-so.”)
 What makes it mean so-so? (The missing *gut* — the absence is the message.) Which answer sits at the top of the ladder? (*Sehr gut.*)
 At the bottom? (*Nicht so gut.*)

3.16 und — “and,” and how to hand the question back

Someone asks how you are; you answer. A conversation only starts when you ask back — and German returns the question in two words.

You’ll want to know: und

und — “and.”

It is English **and** with the vowel darkened, and it has barely changed in a thousand years — one of the oldest words either language still uses daily.

Sounds you’ll need

- **d-t-final** — say *oont*, not *oond*. German hardens a **d** at the end of a word into a **t**. It is the same rule that makes *Tag* come out as *tock* rather than *tahg*: whatever the spelling, a final consonant goes voiceless. So *und* rhymes with English *hunt*, not with *shunned*.

Grammar Lens: returning the question

Hand the question back by naming the other person — in the **to-whom** form, because it is short for “and how goes it *to you?*”

To a friend**To a stranger***und dir?**und Ihnen?*

Not *und du* — the dative is doing real work here, and using the doer-form is the giveaway of a beginner. The same shape appears across the series: Spanish *¿y tú?*, French *et toi?*

Your turn

Say these aloud:

- “und” (*oont*, hard *t*)
- “und dir?” — and you, to a friend
- “und Ihnen?” — and you, to a stranger

Before you move on

How is *und* pronounced, and why? (*Oont* — a final *d* hardens to *t*.) Return the question to a friend. (*Und dir?*) To a stranger? (*Und Ihnen?*) Why not *und du*? (It is short for “how goes it *to you*” — the to-whom form.)

3.17 Practice — *Wie geht's?*, casually

No new words. Everything below has had its own lesson; this is the first time they run together at speed.

The exchange**German****English***Hallo! Wie geht's?*

Hi! How are you?

Gut, danke, und dir?

Well, thanks — and you?

Es geht.

So-so.

Danke! — Bitte.

Thanks! — You're welcome.

Four moves: greet, ask, answer-and-return, close the courtesy loop.

Grammar Lens: why *dir*, and not *du*

Und dir? keeps the dative because it is short for the full question — “and how goes it **to you**?” Saying *und du* would be the one wrong note in the whole exchange, and it is the commonest beginner slip there is.

Your turn

Say these aloud:

- the whole exchange, both voices
- “Wie geht’s? — Gut, danke.”
- “Und dir? — Es geht.”

Twice through: “Wie geht’s? — Gut, danke, und dir?”

Before you move on

Run the casual exchange without looking. Which answer is the so-so one? (*Es geht.*) Which word answers *danke*? (*Bitte.*) Why *dir* and not *du*? (The question means “how goes it *to you*” — the to-whom form.)

3.18 Formal practice — *Wie geht es Ihnen?*

Same exchange, same order, same verb. One word changes throughout — and that is the chapter’s whole argument about German politeness.

The exchange

German	English
<i>Guten Tag. Wie geht es Ihnen?</i>	Good day. How are you?
<i>Danke, gut. Und Ihnen?</i>	Well, thanks. And you?
<i>Es geht.</i>	So-so.
<i>Danke! — Bitte.</i>	Thanks! — You’re welcome.

Set it beside the casual version and the difference is two words, both of them the listener:

	Casual	Formal
the question	<i>Wie geht's?</i>	<i>Wie geht es Ihnen?</i>
the return	<i>und dir?</i>	<i>und Ihnen?</i>

Danke, gut, es geht and *bitte* do not shift at all. German courtesy words are register-neutral; the politeness is carried entirely by the pronoun.

Your turn

Say these aloud:

- the formal exchange, both voices
- “Wie geht es Ihnen? — Danke, gut.”
- “Und Ihnen? — Es geht.”

Twice through: “Wie geht es Ihnen? — Danke, gut. Und Ihnen?”

Before you move on

Which greeting opens the formal exchange? (*Guten Tag.*) Which dative pronoun appears twice? (*Ihnen.*) What changes from the casual version? (*Dir* becomes *Ihnen* — nothing else.) Where does German keep its politeness? (In the pronoun.)

Chapter 4

Farewells

Modes: 🗣️ voice (12) 👁️ eyes (1) ✍️ pen (3) 🗣️ Hands-free start: first 7 of 16 lessons.

By the end of this chapter: I can end a German conversation politely, choose a farewell that fits the situation, and write German’s three distinctive marks — the eszett, the umlaut, and a capital on every noun.

German parts formally with a promise to see each other again, casually with a word that travelled from French through Walloon and Low German before it got here, and softly with bis — “until” — plus a word for time. This chapter takes auf Wiedersehen apart into the three words it is made of, then teaches bis as a recipe and fills its slot three times: bald, später, morgen. GE-C04-practice closes the arc with the first conversation that runs from hello to goodbye.

4.1 sehen — “to see,” and it is English see

The German goodbye is a promise to *see* each other again. Before you can say it, you need the verb — and you have met its spelling trick already.

You’ll want to know: sehen

sehen — “to see.”

The **-en** on the end is the infinitive ending you know from *gehen* and *heißen*: the dictionary form of every German verb wears it.

Sounds you'll need

- **h-silent-lengthening** — the same silent *h* as in *gehen*: it is not breathed, it only stretches the vowel. *ZAY-en*.
- **s-voiced** — a German *s* before a vowel buzzes like English **z**. So *sehen* opens with a *z*, not an *s*.

Put together: *ZAY-en*. Compare *gehen*, *GAY-en* — the two verbs rhyme, and they will keep rhyming through every form.

The word, taken apart — and its English cousins

sehen and English **see** are the same word, both from Germanic ***sehwan**. There is no Latin in this line at all — unlike Spanish *ver* and French *voir*, which both come from Latin *vidēre* (the *vid-* you can still see in English **video** and **evident**).

So the two families split the sense of sight between them:

Family	“To see”	Still visible in English
Germanic	German <i>sehen</i> , English <i>see</i>	<i>see</i> , <i>sight</i>
Latin	Spanish <i>ver</i> , French <i>voir</i>	<i>video</i> , <i>vision</i> , <i>evident</i>

English, as usual, ended up owning both halves.

Your turn

Say these aloud:

- “sehen” (*ZAY-en*) — buzzing *z*, silent *h*
- “gehen” then “sehen” — they rhyme
- “sehen” and English “see” — the same word

Before you move on

What does *sehen* mean, and which English word is it? (“To see”; *see*.) What does the *h* do? (Only lengthens the vowel.) Where does Spanish *ver* come from instead? (Latin *vidēre* — English *video*,

evident.)

4.2 wieder — “again,” and the *with* that means *back*

You have *sehen*, “to see.” The goodbye promises to see each other **again** — so the next piece is that “again.”

You’ll want to know: wieder

wieder — “again.”

Said *VEE-der*: the **w** says *v* and **ie** is a long *ee*, both rules you already met in *wie*. The final **-er** softens almost to *-uh*.

The word, taken apart — and its English cousins

The obvious guess is that *wieder* is English **with**er. It is not. Its real cousin is the **with-** of **withdraw**, **withstand** and **withhold** — and that *with-* is not the ordinary English *with* meaning “alongside.” It is an older word meaning **back** or **against**:

- to **with**draw is to draw **back**
- to **with**stand is to stand **against**
- to **with**hold is to hold **back**

That older sense is exactly what *wieder* still carries: **back, again**. So when a German says *wieder*, they are saying the *with-* of *withdraw*.

Your turn

Say these aloud:

- “wieder” (*VEE-der*) — *v*, then a long *ee*
- “withdraw”, “withstand” — the *with-* that means *back*
- “wieder sehen” — to see again

Before you move on

What does *wieder* mean? (“Again.”) Which English word is it hiding in? (The *with-* of *withdraw*.) What does that *with-* mean there? (“Back” or “against” — not “alongside.”)

4.3 auf — “on, upon,” and it is English *up*

Two pieces down, one to go. The formal goodbye opens with a three-letter word that turns out to be one you say constantly in English.

You’ll want to know: auf

auf — “on, upon.”

Sounds you’ll need

- **au-diphthong** — German **au** is the *ow* of English *house*, never the *aw* of *caught*. So *auf* rhymes with English **owf**, not with *oaf*.
- **f-final** — the **f** is crisp and unvoiced at the end.

The word, taken apart — and its English cousins

auf is English **up**. The vowel drifted — German widened it to *au*, English kept it short — but it is one word, and the meanings still overlap almost exactly:

German	English
<i>auf</i>	up, upon, on
<i>aufstehen</i>	to stand up
<i>aufmachen</i>	to make up , to open

English **upon** is literally *up* + *on*, which is the same doubling German gets from *auf* alone. That is why *auf* translates sometimes as “up” and sometimes as “on”: English split the job into two words and German never did.

Your turn

Say these aloud:

- “auf” (*owf*) — the *ow* of *house*
- “auf” and English “up” — the same word
- “auf wieder sehen” — on the seeing-again

Before you move on

What does *auf* mean? (“On, upon.”) Which English word is it? (*Up*.) How is **au** pronounced? (Like the *ow* in *house*.)

4.4 auf Wiedersehen — “goodbye,” i.e. “till we see again”

Three lessons, three words. Now snap them together — nothing here is new.

You’ll want to know: auf Wiedersehen

auf Wiedersehen — “goodbye,” to a stranger, an elder, or on the telephone.

Said *owf VEE-der-zay-en*. Piece by piece:

German	English
<i>auf</i>	on, upon
<i>wieder</i>	again
<i>sehen</i>	to see

So it reads “**on the seeing-again**” → “until we see each other again.” Note the capital **W**: welded together the three words became a *noun*, and German capitalises every noun. *Ein Wiedersehen* on its own is “a reunion.”

Why it’s said this way

Set the three goodbyes side by side and each language shows what it thinks parting is:

Language	Goodbye	The metaphor
German	<i>auf Wiedersehen</i>	“till we see again”
French	<i>au revoir</i>	“till the re-seeing ”
Spanish	<i>adiós</i>	“to God ”

German and French shake hands on a re-seeing; Spanish commends you to God. The German and the French are not merely similar — they are the same sentence built from each language’s own parts.

Your turn

Say these aloud:

- “auf Wiedersehen” — *owf VEE-der-zay-en*
- pull it apart — “auf”, “wieder”, “sehen”
- “auf Wiedersehen” then “au revoir” — the same sentence, twice

Before you move on

What does *auf Wiedersehen* literally say? (“On the seeing-again.”)
 What are its three pieces? (*Auf, wieder, sehen.*) Why the capital **W**? (The welded word is a noun, and German capitalises nouns.)

4.5 tschüss — the casual “bye” that used to say “to God”

Between friends, Germans almost never say the full *auf Wiedersehen*. They say one clipped syllable — which hides the best secret in this chapter.

You’ll want to know: tschüss

tschüss — “bye.”

Sounds you’ll need

- **tsch-ch** — **tsch** is the *ch* of English **church**. So the word starts *chü-*, not *tsh-oo*.
- **umlaut-ue** — **ü** is made the way you made **ö**, but starting from *ee* instead of *ay*: say **ee**, then round your lips without moving your tongue.

Together: *chüss*, short and clipped, rhyming roughly with a rounded

chuess.

The word, taken apart — and its English cousins

tschüss looks purely German. Trace it back and it leaves the country entirely:

Step	Form	Language
1	<i>adieu</i> — “to God”	French
2	<i>adjûs</i>	Walloon (southern Belgium)
3	<i>atschüs</i>	Low German
4	<i>tschüss</i>	modern German

And since French *adieu* is à *Dieu*, “to God,” the breeziest German goodbye is a far-travelled cousin of French **adieu** and Spanish **adiós** — all three the same small blessing, just worn down further at each step. The friendliest, most throwaway German goodbye is secretly the most solemn one.

Grammar Lens: which goodbye, to whom

This is **register** — the same split you have drilled since *du* and *Sie*. Pick the parting to match the relationship:

Say	To
<i>tschüss</i>	friends, family, peers, casual shops
<i>auf Wiedersehen</i>	strangers, elders, officials, the telephone

If you would say *Sie* to them, say *auf Wiedersehen*.

Why it’s said this way

You will also hear **tschau**. That one is Italian *ciao*, borrowed straight and respect to German spelling rules — so German ended up with two casual goodbyes imported from two different Romance languages.

Your turn

Say these aloud:

- “ee” then round your lips — “ü”

- “tschüss” — *chüss*, short and clipped
- the chain — “adieu”, “adjûs”, “atschüs”, “tschüss”

Before you move on

What does *tschüss* secretly mean? (“To God” — it is *adieu*.) Which Spanish word is its cousin? (*Adiós*.) Whom do you say it to? (Anyone you would call *du*.)

4.6 bis — “until,” and the shape of every soft goodbye

You have the formal goodbye and the casual one. Between them sits a whole family of softer partings, and every one of them starts with the same small word.

You’ll want to know: bis

bis — “until, up to.”

Said *biss*: a short *i* as in English *bit*, and a crisp unvoiced *s* at the end — this one does *not* buzz, because the buzzing rule only applies before a vowel.

Grammar Lens: bis plus a time word

bis is a **recipe**, not a phrase. Put a word for time after it and you have a goodbye:

bis + *a time* → “see you *then*”

The other two languages in this book build their soft goodbyes exactly the same way, which means once you own the recipe you own three languages’ worth of it:

Language	The preposition	Example
German	<i>bis</i>	<i>bis ...</i>
Spanish	<i>hasta</i>	<i>hasta ...</i>
French	<i>à</i>	<i>à ...</i>

The next three lessons each supply one time word to pour into the slot.

Your turn

Say these aloud:

- “bis” (*biss*) — short *i*, crisp *s*
- the three prepositions — “bis”, “hasta”, “à”
- “bis ...” and leave the slot open

Before you move on

What does *bis* mean? (“Until, up to.”) What has to follow it to make a goodbye? (A word for time.) Which Spanish and French words do the same job? (*Hasta* and *à*.)

4.7 bald — “soon,” which is English *bold*

Bis is waiting for a time word. Here is the first one — and it is an English word you would never have guessed.

You’ll want to know: bald

bald — “soon.”

Said *balt*, not *bald*: the final **d** hardens to **t** by **final devoicing**, the rule you met on *und* and on *Tag*. It has nothing to do with English *bald* (hairless) — that is a pure coincidence of spelling.

The word, taken apart — and its English cousins

bald is English **bold**.

Old High German *bald* meant “bold, brave, quick.” Then the sense drifted along a line that is easy to walk: what is done **boldly** is done **without hesitating** → done **quickly** → happening **soon**.

German followed the speed. English followed the courage. One word, two destinations — and English still keeps a trace of the German path in the archaic “**full boldly**” meaning *promptly*, and in the way *bold* can still mean *sudden* in older writing.

Your turn

Say these aloud:

- “bald” (*balt*, hard *t*)
- “bald” and English “bold” — one word, two senses
- “bis bald” — until soon

Before you move on

What does *bald* mean? (“Soon.”) Which English word is it? (*Bold* — not *bald*.) How did “brave” become “soon”? (What is done boldly is done quickly.)

4.8 bis bald — “see you soon”

The recipe and the first ingredient are both yours. Pour one into the other.

You’ll want to know: bis bald

bis bald — “until soon” → “see you soon.”

Said *biss BALT*, with the stress on the second word and that final **d** hardening to **t**.

Use it when you genuinely expect to see the person before long — it carries a small promise the way English “see you soon” does, and it sounds odd to someone you are unlikely to meet again.

Its twins: Spanish *hasta pronto*, French *à bientôt*. All three are the same two-word recipe — preposition plus “soon.”

Your turn

Say these aloud:

- “bis bald” — *biss BALT*
- the three twins — “bis bald”, “hasta pronto”, “à bientôt”
- “Tschüss, bis bald!”

Before you move on

What does *bis bald* mean, word for word? (“Until soon.”) When would you not use it? (When you do not expect to see the person before long.) What is the recipe? (*Bis* plus a time word.)

4.9 spät — “late,” and *später*, your first comparative

Bis bald is for soon. For a vaguer “see you around,” German needs “later” — and it builds that from “late” exactly the way English does.

You’ll want to know: spät

spät — “late.”

The **ä** is the vowel you met in *Nächte*: roughly the *e* of English *bed*, held a little longer.

Sounds you’ll need

- **st-initial-scht** — a German **st** at the *start* of a word is said **sht**. So *spät* opens like English *shp*, not *sp*: **shpayt**.

The same rule gives *Stadt* as *shtat* and *Straße* as *shtrahsse*. It is one of the fastest ways to stop sounding like a beginner, and it costs one rule.

The word, taken apart — and its English cousins

Add **-er** and you have the comparative:

German	English
<i>spät</i>	late
<i>später</i>	later

That **-er** is not a coincidence and not a borrowing — English and German inherited the same comparative ending from the same ancestor. *Late/later*, *spät/später*: one pattern, two languages. So the second goodbye in the family is **bis später**, “until later” — the twin of Spanish *hasta luego* and French *à plus tard*, and the one to reach for when you have no idea when you will actually meet again.

Your turn

Say these aloud:

- “spät” (*shpayt*) — *sht*, not *st*
- “spät” then “später” — late, then later
- “bis später” — until later

Before you move on

What does *spät* mean, and *später*? (“Late”; “later.”) How is an initial **st** pronounced? (*Sht* — *shpayt*.) Which ending makes the comparative, in both languages? (**-er**.)

4.10 bis später — “see you later”

Second ingredient into the same slot — and this one commits to nothing at all, which is exactly why it is the most used.

You’ll want to know: bis später

bis später — “until later” → “see you later.”

Said *biss SHPAY-ter* — remember the initial **st** is *sht*.

Where *bis bald* promises “before long,” *bis später* promises nothing: it is the German equivalent of a wave. That vagueness makes it the safe default when you have no idea when you will meet again.

German	Spanish	French
<i>bis später</i>	<i>hasta luego</i>	<i>à plus tard</i>

Your turn

Say these aloud:

- “bis später” — *biss SHPAY-ter*
- “bis bald” then “bis später” — soon, then vaguely
- the twins — “hasta luego”, “à plus tard”

Before you move on

What does *bis später* mean? (“Until later.”) How does it differ from *bis bald*? (*Bald* promises soon; *später* promises nothing.) How do you say the initial **st**? (*Sht.*)

4.11 morgen — “tomorrow,” the same word doing a second job

No new word this time — a word you have had since chapter one, doing something you have not seen it do.

You’ll want to know: morgen

morgen — “tomorrow.”

Same spelling as the *Morgen* of *Guten Morgen*, same sound: *MOR-gen*, with the German **r** made at the back of the throat.

Grammar Lens: the capital letter splits the sense

German capitalises every noun. That rule usually just makes text look busy — here it does real work:

Written	Part of speech	Means
<i>der Morgen</i>	noun	the morning
morgen	adverb	tomorrow

Guten Morgen! is “good **morning**.” *Bis morgen* is “until **tomorrow**.” The capital is the only thing telling them apart on the page — and once you know that, German’s noun-capitalisation stops being decoration and starts being punctuation you can read.

The word, taken apart — and its English cousins

This morning-becomes-tomorrow move is not a German quirk. All three languages make “tomorrow” out of “morning”:

Language	Morning	Tomorrow
German	<i>Morgen</i>	<i>morgen</i>
Spanish	<i>mañana</i>	<i>mañana</i>
French	<i>matin</i>	<i>demain</i>

And English did it too, then half forgot: **morrow** meant *morning*, and **tomorrow** is literally *to (the) morrow*. So *bis morgen* is “see you on the morrow,” almost word for word.

Your turn

Say these aloud:

- “Guten Morgen” — good morning, capital M
- “bis morgen” — until tomorrow, small m
- “morrow” then “morgen” — the same old word

Before you move on

What are the two meanings of *morgen*? (“Morning” and “tomorrow.”) What tells them apart in writing? (The capital letter — nouns take one.) Which English word is the old “morning”? (*Morrow*, still inside *tomorrow*.)

4.12 bis morgen — “see you tomorrow”

Third ingredient, and the most definite of the three: a goodbye with an actual date on it.

You’ll want to know: bis morgen

bis morgen — “until tomorrow” → “see you tomorrow.”

Said *biss MOR-gen*. Small **m**: here *morgen* is the adverb “tomorrow,” not the noun *der Morgen*, “the morning.”

This is the one you say leaving work, or leaving a class you both attend again the next day. Unlike *bis bald* and *bis später*, it makes a claim that can be checked.

Grammar Lens: the bis... family, complete

One preposition, three time words, three goodbyes — and the same three in Spanish and French, built the same way:

German	Means	Spanish / French twin
<i>bis bald</i>	soon	<i>hasta pronto / à bientôt</i>
<i>bis später</i>	later	<i>hasta luego / à plus tard</i>
<i>bis morgen</i>	tomorrow	<i>hasta mañana / à demain</i>

You now hold German's whole farewell set: the formal *auf Wiedersehen*, the casual *tschüss*, and these three soft partings.

Your turn

Say these aloud:

- “bis morgen” — *biss MOR-gen*, small *m*
- all three — “bis bald”, “bis später”, “bis morgen”
- “Tschüss, bis morgen!”

Before you move on

What does *bis morgen* mean? (“Until tomorrow.”) Why the small **m**? (It is the adverb “tomorrow,” not the noun “morning.”) Name all three *bis...* goodbyes. (*Bald*, *später*, *morgen*.)

4.13 ß — the letter that is two s's in a coat

German has one letter no other Latin alphabet uses. You have already written it without being told what it was: *heißen*.

You'll want to know: ß

ß — the *eszett*, or *scharfes S*, “sharp S.”

It is not a capital *B*, and it is not exotic. It is **ss** wearing a single character, and it always sounds like a plain sharp *s* — never a *z*, never a *b*.

It is a **ligature**: two letters fused into one shape. Its name says which two. *Es-zett* is literally “s-z” — in the old German hand the **long s** (a tall *s* drawn like an *f* without its crossbar) was joined to a following *s* or *z*, and the join hardened into **ß**.

Grammar Lens: ß after long, ss after short

Modern spelling gives it one clean job, and it is a genuinely useful one — the letter tells you how long to hold the vowel *before* it.

ß — long vowel

Straße (long *a*)
Fuß (long *u*)
weiß (diphthong *ei*)
groß (long *o*)

ss — short vowel

Fluss (short *u*)
muss (short *u*)
Kuss (short *u*)
Schloss (short *o*)

So seeing **ß** means “the vowel before me is long.” *Straße* stretches its *a*; *Fluss* clips its *u*. One letter, two pieces of information.

Writing — drawing the eszett

Draw it as a tall loop joined to a descending tail — the long-s curve, then the s/z finish. Copy **weiß** once with the model in view, then **Straße**.

Say each word as you finish it, and stretch the vowel the **ß** is telling you to stretch.

Why it’s said this way

Two things worth knowing about where you will and will not see it:

- **It has no everyday capital.** No German word begins with *ß*, so in ALL-CAPS you traditionally write **SS**: *STRASSE*. A capital eszett was finally made official in 2017, but *SS* is still what you will see.
- **Switzerland dropped it entirely.** Swiss German always writes *ss* — *Strasse*. So *ß* on a sign is a Germany-and-Austria marker.

Before you move on

What two letters is **ß** made of, and what does its name say? (*s* and *z* — *es-zett*.) What does it tell you about the vowel before it? (That it is long.) How is it written in all-caps, and where is it not used at all? (*SS*; Switzerland.)

4.14 ä ö ü — the two dots that used to be an *e*

You have already made two of these sounds — the **ö** of *schön* and the **ü** of *tschüss*. Now meet the mark itself, and what it is doing there.

You'll want to know: the umlaut

Umlaut — the two dots on **ä ö ü**, which shift the vowel *forward* in the mouth.

Um-laut is “around-sound” (*um*, around + *Laut*, sound). Say the plain vowel, then brighten it toward *ee*:

Plain	Umlauted	How
a → ä	<i>Mann</i> → <i>Männer</i>	<i>ah</i> becomes the <i>e</i> of <i>bed</i>
o → ö	<i>schon</i> → <i>schön</i>	<i>oh</i> becomes a rounded <i>eh</i>
u → ü	<i>Mutter</i> → <i>Mütter</i>	<i>oo</i> becomes <i>ee</i> with rounded lips

They look like the French tréma and do the opposite job: a tréma **splits** two vowels, an umlaut **changes** one.

The word, taken apart — and its English cousins

The dots are a fossil. The fronting was originally caused by an **e** in the *next* syllable, and scribes marked it by writing a tiny **e above the vowel**. In the old German hand that *e* was two little vertical strokes — which, shrunk and simplified, became two dots.

So an umlaut is a **flattened e sitting on top of the vowel**, and that is exactly why the ASCII fallbacks put it back on the line:

With dots	Ghost <i>e</i> restored
<i>Müller</i>	Mueller
<i>schön</i>	schoen
<i>Bär</i>	Baer

Grammar Lens: the umlaut does real work

Umlauts are not decoration. Fronting a vowel is how German marks whole grammatical changes, so learn to *expect* it:

Base	Umlauted	What changed
<i>Mann</i> (man)	<i>Männer</i>	plural
<i>Buch</i> (book)	<i>Bücher</i>	plural
<i>groß</i> (big)	<i>größer</i>	comparative
<i>Hund</i> (dog)	<i>Hündchen</i>	diminutive

When a German word brightens its vowel, something grammatical happened to it — usually *more than one*, *more*, or *smaller*.

Writing — the two dots

Two dots, side by side, sitting squarely **above** the vowel — not slanted, and not joined. Copy **schön** once with the model in view, then **Mütter**.

Say each word as you finish it, and let the vowel brighten as you write the dots.

Your turn

Say these aloud:

- “Mann” then “Männer” — hear the vowel brighten for the plural
- “Mutter” then “Mütter” — *ee* with rounded lips
- “schön” then “schoen” — put the ghost *e* back down

Before you move on

What does *Umlaut* literally mean? (“Around-sound.”) What are the dots, historically? (A shrunk *e* that migrated on top.) What is the fallback spelling for *ü*? (*ue*.) Name one grammar job the umlaut

does. (Plural, comparative, or diminutive.)

4.15 Großschreibung — why German capitalises every noun

You met this rule with *der Tag*, and you used it to tell *Morgen* from *morgen*. Now here it is in full — and it turns out to be doing more work than it looks.

You'll want to know: Großschreibung

Großschreibung — “capital-writing.” Every noun takes a capital, anywhere in the sentence.

Not just names or sentence starts — *every* noun:

Der Hund frisst das Essen in der Küche. — “The dog eats the food in the kitchen.”

Three nouns, three capitals, two of them mid-sentence. Also capitalised: the polite *Sie*, and any word *used as a noun* (*das Gute*, “the good”).

(The word itself shows off two things you now know: the **ß**, and the initial **st** said *sht* — *GROHSS-shry-boong*.)

Grammar Lens: the capital is a part-of-speech signal

The capital carries **meaning**. It separates words spelt alike that do different jobs:

Lower-case	Capital, so a noun
<i>essen</i> — to eat	<i>das Essen</i> — the food
<i>jung</i> — young	<i>der Junge</i> — the boy
<i>laut</i> — loud	<i>der Laut</i> — the sound

This is the same machinery that split *morgen* from *Morgen*. With *der/die/das* in front as well, German flags its nouns **twice** — which is why long German sentences are easier to parse, not harder.

Why it's said this way

English used to do this too: read a page of 1700s English and the Nouns are Capitalised. English dropped the habit in the eighteenth century; German kept it and wrote it into the rules. It is a living fossil of older European printing.

Writing — applying the rule

Capitalise the first letter of every noun, wherever it sits. Two tests if you are unsure: is there a *der/die/das* in front, or does it end in *-ung*, *-heit* or *-schaft*? Those are noun factories — *Zeitung*, *Freiheit*, *Freundschaft*.

Copy **Der Hund frisst das Essen** once, then write *Guten Morgen* and *bis morgen* one under the other and check every capital.

Your turn

Say these aloud:

- “Der Hund frisst das Essen” — every noun capitalised
- “essen” then “das Essen” — the capital flips it from doing to thing
- “Guten Morgen” then “bis morgen” — the same flip, in a word you own

Before you move on

Which words does German capitalise? (Every noun, anywhere — plus *Sie*.) What does the capital tell you? (That the word is a noun: *essen* versus *das Essen*.) Which language used to do this and stopped? (English, in the 1700s.)

4.16 Practice — hello to goodbye, in one conversation

No new words. This is the first conversation you can run from the first word to the last — everything in it has had its own lesson.

Grammar Lens: which farewell, when

You are...	Say
formal, to a stranger	<i>Auf Wiedersehen.</i>
casual, to a friend	<i>Tschüss.</i>
meeting again soon	<i>Bis bald.</i>
making no promises	<i>Bis später.</i>
leaving for the day	<i>Bis morgen.</i>

The exchange

Everything from your first greeting to here, in one conversation:

German	English
<i>Hallo! Ich heie Anna. Wie heien Sie?</i>	Hello! My name is Anna. What is your name?
<i>Ich heie Peter. Freut mich.</i>	My name is Peter. Pleased to meet you.
<i>Wie geht es Ihnen?</i>	How are you?
<i>Danke, gut. Und Ihnen?</i>	Well, thanks. And you?
<i>Sehr gut. Bis morgen, Peter.</i>	Very well. See you tomorrow, Peter.
<i>Bis morgen, Anna. Auf Wiedersehen!</i>	See you tomorrow, Anna. Goodbye!

Between friends, that last line becomes *Tschüss, bis morgen!* — and note that the whole exchange stayed formal because it opened formally with *Sie*.

Your turn

Say these aloud:

- the whole exchange, both voices
- the closing pair — “Bis morgen.” ... “Auf Wiedersehen!”
- the casual version of that close — “Tschüss, bis morgen!”

Twice through: “Wie geht es Ihnen? — Danke, gut. Und Ihnen?”

Before you move on

Run the whole conversation without looking. Which goodbye promises a re-seeing? (*Auf Wiedersehen.*) Which one is secretly “to God”? (*Tschüss.*) Which would you use leaving a class you both attend tomorrow? (*Bis morgen.*)

Chapter 5

The First Verbs

Modes: ⇄ voice (5) ⇄ Hands-free start: all 5 lessons.

Until now you have assembled fixed phrases. This chapter hands you the machine itself: the regular German verb, whose endings you learn once and then apply to thousands of words. Three verbs — *wohnen*, *machen*, *lernen* — and then your first sentence built from parts nobody handed you.

5.1 *wohnen* — “to live,” and the regular German verb

Sounds you’ll need

German *w* is an English *v*: *wohnen* = *VOH-nen*. The *h* here merely **lengthens** the *o* (*woh-* = a long *oh*); it is not breathy.

The word, taken apart — and its English cousins

wohnen (“to live, to dwell”) ← Old High German *wonēn*, “to dwell, to be accustomed, to be content” — dwelling and *being used to* a place were the same idea. That root survives in English, just barely: **wont**, “accustomed” (*as is his wont*), and *won’t*’s distant cousin; the archaic **won** / **wone**, “to dwell.” It is also kin to **win** and **wish** — all from a root about *striving for* or *being content*.

Grammar Lens

The regular (weak) present tense. Drop the *-en* to get the stem *wohn-*, then add the endings. This one table is the pattern behind

thousands of German verbs.

Person	Ending	<i>wohnen</i> →
<i>ich</i> (I)	-e	<i>ich wohne</i>
<i>du</i> (you)	-st	<i>du wohnst</i>
<i>er / sie / es</i> (he / she / it)	-t	<i>er wohnt</i>
<i>wir</i> (we)	-en	<i>wir wohnen</i>
<i>ihr</i> (you all)	-t	<i>ihr wohnt</i>
<i>sie / Sie</i> (they / you formal)	-en	<i>sie wohnen</i>

Unlike French — where *-e*, *-es*, *-ent* are all silent — **German endings are audible**: *wohne* / *wohnst* / *wohnt* really do sound different. So you could almost tell who is speaking from the ending alone. German nevertheless *keeps* the pronoun; why, comes later in this chapter. Now you can answer a *wo* (“where”) question:

Ich wohne in Berlin. = “I live in Berlin.”

5.2 *machen* — “to make / to do,” and it is just English *make*

Sounds you’ll need

The *ch* after *a* is the raspy *ach*-sound, made in the throat like the *ch* of Scottish *loch*: *machen* = *MAKH-en*, with a clean open *ah*.

The word, taken apart — and its English cousins

machen ← Germanic *makōn*, “to make, to shape, to fit together” — the *same word as English make*. The German *k*-sound became the *ch* rasp along the way, by the **High German consonant shift**: *make* → *machen*, just as *ik* → *ich* and *book* → *Buch*. So *machen* is *make*, wearing German pronunciation.

German uses it for both “make” and “do”:

Ich mache einen Kuchen. = “I’m making a cake.”
Was machst du? = “What are you doing?”

Grammar Lens

Same weak endings. *ich mache · du machst · er macht* (-e / -st / -t); *wir machen · ihr macht · sie machen*. Identical to *wohnen* — nothing new to learn. That is the payoff of a regular pattern.

Person	<i>machen</i> →
<i>ich</i>	<i>mache</i>
<i>du</i>	<i>machst</i>
<i>er / sie / es</i>	<i>macht</i>
<i>wir</i>	<i>machen</i>
<i>ihr</i>	<i>macht</i>
<i>sie / Sie</i>	<i>machen</i>

5.3 *lernen* — “to learn,” and it *is* English *learn*

Sounds you’ll need

The German **r** is a soft guttural at the back of the throat: *lernen* = *LER-nen*.

The word, taken apart — and its English cousins

lernen ← Germanic *līznōjan*, “to learn, to get to know” — the *same root as English learn*. Its close relatives are lovely: **lore**, the body of what has been *learned* (folklore, the *lore* of a craft); and **last** (a shoemaker’s *last*) together with Gothic *lais* (“I know”), which share the deep root — the idea of *following a track* to knowledge. So *lernen* is not foreign at all: it is *learn*, and its noun *die Lehre* (“the teaching, the lesson”) is *lore*.

Grammar Lens

The same weak endings, one last time — -e / -st / -t in the singular, -en / -t / -en in the plural. Three verbs, *wohne*, *mache*, *lerne*, one pattern: you now conjugate the regular German present.

Person	<i>lernen</i> →
<i>ich</i>	<i>lerne</i>
<i>du</i>	<i>lernst</i>
<i>er / sie / es</i>	<i>lernt</i>
<i>wir</i>	<i>lernen</i>
<i>ihr</i>	<i>lernt</i>
<i>sie / Sie</i>	<i>lernen</i>

5.4 *Ich lerne Deutsch* — your first real sentence

Sounds you'll need

Deutsch = *DOYTCH*: *eu* is the *oy* vowel, and *tsch* is the *tch* of English *match*. The whole sentence: *ikh LER-neh DOYTCH*.

Everything pays off: you take a **verb** you have conjugated and a **noun**, and build a sentence nobody handed you — *Ich lerne Deutsch*, “I’m learning German.” (There is no separate “am ...-ing” in German: *ich lerne* covers both “I learn” and “I am learning.”)

The word, taken apart — and its English cousins

Deutsch = “German” (the language), and note it is **capitalized**, because it is a noun here. It comes from Old High German **diutisc**, “of the people, of the folk” — from **peudō*, “the people.” The Germanic tribes simply called their own tongue “the people’s [language],” as opposed to Latin.

That “folk” root spread far: English **Dutch** is the *same* word (it once meant all continental West Germanic; English later narrowed it to the Netherlands); **Teutonic** comes via Latin *Teutonicus* from the same **peudō*; Italian calls Germany *Tedesco* and French had *thiois* — all echoes of *diutisc*.

Morphology Spotlight

Ich (I) + **lerne** (learn, from *lernen*) = **Ich lerne Deutsch**.

Grammar Lens

Why German keeps the pronoun. German keeps *ich, du, er...* — like French, and unlike Spanish or Italian, which drop it. But for a *different reason*. Spanish drops *yo* because *hablo* already says “I.” French keeps *je* because its endings are *silent*. German’s endings are *not* silent (*wohne / wohnst / wohnt* differ audibly) — yet German still needs the pronoun because its **grammar demands an overt subject**: a German sentence is built around the verb sitting in second position, with something before it. So: Spanish **drops**, French keeps for **sound**, German keeps for **structure**.

Swap the pieces and the pattern keeps working: *Ich wohne in Berlin. Was machst du?*

5.5 Making sentences with weak verbs

For the first time you are *building* German sentences from a pattern, not reciting phrases. Run each verb through *ich / du / er*:

Verb	<i>ich</i>	<i>du</i>	<i>er</i>
<i>wohnen</i> (to live)	<i>wohne</i>	<i>wohnst</i>	<i>ohnt</i>
<i>machen</i> (to make/do)	<i>make</i>	<i>machst</i>	<i>macht</i>
<i>lernen</i> (to learn)	<i>lerne</i>	<i>lernst</i>	<i>lernt</i>

The same endings every time (**-e / -st / -t**), and — unlike French — you can *hear* them all. You still keep the pronoun, because German needs an overt subject.

Now say something real:

- *Wo wohnst du? — Ich wohne in Berlin. Und du?*
- *Ich wohne in Wien. Was machst du?*
- *Ich lerne Deutsch! — Sehr gut!*
- *Danke! — Bitte.*

 Built this chapter

the regular (weak)	drop <i>-en</i> , add <i>-e/-st/-t/-en/-t/-en</i> ; the endings
present	are audible
<i>wohnen</i>	← <i>wonēn</i> → English <i>wont</i>
<i>machen</i>	← <i>makōn</i> → English <i>make</i> ; <i>Was machst du?</i>
<i>lernen</i>	← <i>līznōjan</i> → English <i>learn, lore</i>
<i>Ich lerne Deutsch</i>	first self-assembled sentence (<i>Deutsch</i> ← <i>diutisc</i> , “of the people” → <i>Dutch</i>)
the pronoun rule	Spanish drops <i>yo</i> ; French keeps <i>je</i> (silent endings); German keeps <i>ich</i> (structure)

What are the three singular weak endings, and are they audible? *-e / -st / -t*; yes — unlike French. Give the “I” forms of the three verbs: *ich wohne, ich mache, ich lerne*. German now moves in real sentences.

Chapter 6

Numbers One to Ten

Modes: 👁 eyes (2) ⇔ **Hands-free start:** none of the 2 lessons.

Here is where German feels *closer to English than any Romance language does*. German’s numbers are not borrowed from Latin — they are German’s own Germanic words, and they are the near-twins of English *one, two, three, four, five*. One sound-law explains every difference.

6.1 *eins, zwei, drei, vier, fünf* — counting to five

Sounds you’ll need

eins, zwei, drei all carry the *ei* = English “eye” sound: *eyns, tsvy, dry*.
fünf: the *ü* is “ee” said with rounded lips; *fünf* $\approx$ *fewnf*.

German	English twin	shared ancestor	Latin cousin
<i>eins</i> (1)	one (and <i>a/an</i>)	* <i>óynos</i>	<i>ūnus</i>
<i>zwei</i> (2)	two (<i>tw-</i> → <i>zw-</i>)	* <i>dwóh₁</i>	<i>duo</i>
<i>drei</i> (3)	three (<i>th-</i> → <i>d-</i>)	* <i>tréyes</i>	<i>trēs</i>
<i>vier</i> (4)	four	* <i>k^wetwóres</i>	<i>quattuor</i>
<i>fünf</i> (5)	five (<i>f...f</i>)	* <i>pénk^we</i>	<i>quīnque</i>

The word, taken apart — and its English cousins

German and English are **siblings**; Latin is a **cousin**. So *drei* is not from Latin *trēs* — both descend from one prehistoric word, and **Grimm’s Law** is the recipe for the differences: an old *t* became Germanic *th/d* (*trēs* → **three** → *drei*), and an old *p* became *f*

(**pénk^we* → **five** / *fünf*, while Latin kept it as *quīnque*). Say *fünf* and **five** back to back — same word, one *p*-turned-*f* apart.

Grammar Lens

eins → *ein* / *eine* (**one** = **a/an**). Like English *one/an* and Spanish *uno/un*, German **eins** becomes the article **ein** (masculine/neuter) / **eine** (feminine) before a noun: *ein Kaffee* “a/one coffee,” *eine Katze* “a/one cat.” The counting form is *eins*; the article drops the -s. The other numbers do not change for the article.

6.2 *sechs, sieben, acht, neun, zehn* — finishing the count

The rest of the way to ten — and again, each is the twin of its English number, with Latin as the cousin one sound-shift away. Two of them show Grimm’s Law beautifully.

Sounds you’ll need

acht: the *ch* is the raspy back-of-throat sound (as in *Bach*): *akht*. It matches the *gh* in English *eight* — both were once a real throat sound.
neun = *noyn* (the *eu* = “oy”).

German	English twin	shared ancestor	Latin cousin
<i>sechs</i> (6)	six	* <i>swéks</i>	<i>sex</i>
<i>sieben</i> (7)	seven	* <i>septm</i>	<i>septem</i>
<i>acht</i> (8)	eight	* <i>oktō</i>	<i>octō</i>
<i>neun</i> (9)	nine	* <i>néwn</i>	<i>novem</i>
<i>zehn</i> (10)	ten	* <i>dékm</i>	<i>decem</i>

Etymology

Two showpieces of **Grimm’s Law**:

zehn ↔ **ten** ↔ *decem*: an old *d* became Germanic *t* — so Latin kept *decem*, English shifted to **ten**, and German went one hop further (*t* → *z*) to *zehn*. Same number, three snapshots of one consonant drifting.

acht ↔ **eight** ↔ *Nacht/night*: the German *-cht-* answers English *-ght-*

every time (*acht*/**eight**, *Nacht*/**night**, *Licht*/**light**) — a fossil of a throat sound both languages once had.

Grammar Lens

German borrowed the *months*, not the numbers. English and German both took their **month names straight from Latin** — *September, Oktober, November, Dezember* in German too. So the same “off by two” trick works: those months mean Latin **7, 8, 9, 10** (the Roman year began in March), even though German’s own numbers *sieben/acht/neun/zehn* look nothing like them. The numbers are homegrown; the month labels are Latin imports.

Give 1–10 in German: *eins, zwei, drei, vier, fünf, sechs, sieben, acht, neun, zehn*. None of them is borrowed from Latin — they are Germanic **twins** of the English numbers, cousins of Latin via **Grimm’s Law**. Next chapter builds on this toward the days of the week, and after that, telling the time.

Chapter 7

The Days of the Week

Modes: 👁 eyes (2) ⇔ **Hands-free start:** none of the 2 lessons.

Just as with the numbers, German goes its **Germanic** way here — and lands right next to English. The Romans named the weekdays for planet-gods (*Mars, Mercury, Jupiter, Venus*); the Germanic peoples swapped in *their own* gods, and German and English inherited that same set.

7.1 *Montag to Freitag* — the gods of the Germanic week

Sounds you'll need

-*tag* (“day”) is easy; watch *Freitag* = *FRY-tahk*, with the *ei* = English “eye.”

Mittwoch ends in the raspy *ch*: *MIT-vokh*.

Morphology Spotlight

The pattern: [Germanic god] + *Tag* (“day”). *Tag* = “day” (cousin of English **day**). Before it stands a god — the Germanic counterpart of the Roman planet.

German	god	= English	(Roman planet it replaced)
<i>Montag</i>	the Moon (<i>Mond</i>)	Monday	Moon
<i>Dienstag</i>	Tiw/Ziu , the war-god	Tuesday	Mars
<i>Mittwoch</i>	(<i>none</i> — “ <i>mid-week</i> ”)	Wednesday (Woden)	Mercury
<i>Donnerstag</i>	Donar = Thor (<i>Donner</i> “thunder”)	Thursday	Jupiter
<i>Freitag</i>	Frija/Frigg , love-goddess	Friday	Venus

The word, taken apart — and its English cousins

***Donnerstag* ↔ Thursday.** *Donner* is German for “thunder,” and *Donar* was the Germanic thunder-god — the one the Norse called **Thor**. So *Donnerstag* = “Thor’s day” = **Thursday**, standing in for the Roman *Jupiter* (the sky-thunder king). Same god-slot, three names.

Why it’s said this way

***Mittwoch* is the odd one out.** It ought to be “Wodan’s day” (as English keeps **Wednesday** = Woden’s day). But the medieval Church disliked naming a day for the chief pagan god, so German replaced it with plain **Mittwoch**, “**mid-week**” — a religious edit, just like Portuguese numbering its days.

7.2 *Samstag* and *Sonntag* — the German weekend

Two weekend days, and one more surprise: German’s Saturday is *not* Saturn’s day — it is the **Sabbath**, sharing its root with the Romance languages, not with English *Saturday*. Sunday, though, stays the Sun’s.

German	←	meaning	note
<i>Samstag</i>	<i>Sabbat</i> ← Greek <i>sábbaton</i> ← Hebrew <i>shabbāt</i>	the “ Sabbath ”	<i>not</i> Saturn!
<i>Sonntag</i>	<i>Sun</i> + <i>Tag</i> (<i>Sonne</i> “sun”)	“the Sun ’s day”	= English Sunday

Etymology

Samstag surprises everyone: where English kept the Roman planet (**Saturday** = Saturn), German took the **Sabbath** — Greek *sábbaton* (from Hebrew *shabbāt*, “to rest”) travelled up through the early Church into German as *Sabbat* → *Samstag*. It reached German through Greek-speaking Christians. So German *Samstag* and Spanish *sábado* are the *same* Sabbath, while English alone still points at Saturn.

Why it’s said this way

In northern Germany you also hear **Sonnabend**, “Sun-eve,” the evening before Sunday.

Sonntag is simply “the **Sun**’s day,” *Sonne* + *Tag* — the exact twin of English **Sunday**. Here Germanic and English agree, and the Church did not rename it (unlike Romance, which made it “the Lord’s day,” *domingo/dimanche*). It is a rare Germanic day the Church left alone.

All seven, in order: *Montag*, *Dienstag*, *Mittwoch*, *Donnerstag*, *Freitag*, *Samstag*, *Sonntag*. German names its days for *gods*, like English, not for planets — with two edits: *Mittwoch* (“mid-week,” for Woden) and *Samstag* (the Sabbath, for Saturn). Next chapter builds on this toward telling the time.

Chapter 8

Telling the Time

Modes: ⇄ **voice** (2) ⇄ **Hands-free start:** all 2 lessons.

Something new happens here. German’s numbers were homegrown (*eins*, *zwei*), and its weekdays were Germanic gods (*Donnerstag*). But its word for the **clock** — **Uhr** — is borrowed from Latin, while noon and midnight swing back to native German.

8.1 *Uhr* — the clock, and a Roman word in the German day

Time-keeping came to the German world with Roman and monastic clocks, and the Latin word rode in with them.

Sounds you’ll need

Uhr = *oor*, a long *u* then a soft *r*: one syllable.

The word, taken apart — and its English cousins

Uhr comes from Latin **hōra**, “hour” — the *same* word that became French *heure*, Italian *ora*, and English **hour**. German took it in (through medieval Latin and Low German *ūr(e)*) and made it *Uhr*.

That is the striking part: three layers of the German day, three different origins.

what	German	origin
the numbers	<i>eins, zwei, drei</i>	native Germanic (twins of English)
the weekdays	<i>Montag, Donnerstag</i>	Germanic gods (Latin <i>months</i>)
the clock	<i>Uhr</i>	Latin loan (<i>hōra</i>)

German kept its own numbers and gods, but for the *machine that measures hours* it reached for Rome. German also has a native word, **Stunde**, “an hour’s span” — but for clock-reading, “o’clock,” it is *Uhr*.

Grammar Lens

“**Es ist ... Uhr.**” To tell the time, German says **es ist** (“it is”) + the number + **Uhr**:

Es ist ein Uhr. — “It is one o’clock.”

Es ist zwei Uhr. — “It is two o’clock.”

Es ist zehn Uhr. — “It is ten o’clock.”

Uhr does not add a plural here (not *zwei Uhren* for the time) — it works like English **o’clock**: *zwei Uhr* = “two o’clock.” (*Uhren*, the plural, means “clocks,” the objects.)

8.2 *Mittag* and *Mitternacht* — the native middle of day and night

The clock-word *Uhr* was Latin. But noon and midnight swing back to **native German**: *Mittag* and *Mitternacht* are plain Germanic compounds — “the day’s middle” and “the night’s middle.”

Morphology Spotlight

Both start with **Mitte**, “middle” (cousin of English **mid**, **middle**, and of Latin *medius*).

German	=	literally
<i>Mittag</i>	<i>Mitte + Tag</i>	“ mid-day ” (noon)
<i>Mitternacht</i>	<i>Mitter (Mitte) + Nacht</i>	“ mid-night ” (midnight)

The word, taken apart — and its English cousins

Mittag = “mid-day.” *Tag* (“day”) you met in *Montag, Dienstag*; put “middle” in front and you get noon. Its meaning matches French *midi* (*medius diēs*) exactly — same idea, but German built it from its *own* words instead of borrowing the Latin one.

Mitternacht = “mid-night.” *Nacht* (“night”) is the twin of English **night** (remember *acht/eight, Nacht/night* — the *-cht/-ght* pair). So *Mitternacht* and English **midnight** are the same compound in two Germanic tongues.

To tell the time with them: *Es ist Mittag.* — “It is noon.” *Es ist Mitternacht.* — “It is midnight.”

So German splits the day three ways by origin: **Uhr** (Latin) for the hours, **Mittag/Mitternacht** (native) for its pivots. Next chapter builds on this toward months and family.

Chapter 9

Months and Seasons

Modes: ⇄ voice (2) ⇄ Hands-free start: all 2 lessons.

The German year is built from two different quarries. Its twelve *months* were carried north from Rome, name and all; its four *seasons* are homegrown Germanic, one of them the twin of English **harvest**. This chapter walks both halves and shows where the seam runs.

9.1 *die Monate* — Rome’s calendar in German

German’s numbers are homegrown (*eins*, *zwei*), and its weekday-gods are Germanic (*Donnerstag*, Thor’s day). But its **months** — like its clock-word **die Uhr** — are **borrowed straight from Latin**. Time-reckoning, again, came to the German world from Rome.

German	← Latin	who / what
<i>Januar</i>	<i>Januarius</i>	Janus , god of doors and beginnings
<i>Februar</i>	<i>Februarius</i>	the <i>Februa</i> purification festival
<i>März</i>	<i>Martius</i>	Mars , the war-god
<i>April</i>	<i>Aprilis</i>	perhaps <i>aperire</i> , “to open”
<i>Mai</i>	<i>Maius</i>	Maia , goddess of growth
<i>Juni</i>	<i>Junius</i>	Juno , queen of the gods
<i>Juli</i>	<i>Julius</i>	Julius Caesar
<i>August</i>	<i>Augustus</i>	the emperor Augustus
<i>September</i>	<i>september</i>	“ 7th ” (<i>septem</i>)
<i>Oktober</i>	<i>october</i>	“ 8th ” (<i>octo</i>)
<i>November</i>	<i>november</i>	“ 9th ” (<i>novem</i>)
<i>Dezember</i>	<i>december</i>	“ 10th ” (<i>decem</i>)

Etymology

März = Mars. German borrowed the Roman war-god’s month whole — the same god behind English **March** and behind French *mardi*. And that same god stands behind German’s own *Dienstag* (“Tuesday”), where the Romans’ Mars was *translated* into the Germanic god Tiw. The god came in twice: once by name (*März*), once by translation (*Dienstag*).

Etymology

September–Dezember = 7–10. Even in German these keep the Latin numbers *septem*, *octo*, *novem*, *decem* — because the Roman year began in March, so the “seventh” month was September. German’s own numbers are *sieben*, *acht*, *neun*, *zehn* — but its *month* names count in Latin.

Why it’s said this way

Three layers of the German calendar, three origins: the **numbers** are native, the **weekdays** are Germanic gods, and the **months** (along with the clock-word *Uhr*) are Latin.

9.2 *die Jahreszeiten* — the seasons go native

The months were Latin. The **seasons** swing back to **native German** — and one of them, *Herbst*, is the same word as English **harvest**. The word for “season” itself is transparent: **Jahres-zeit** = “year-time.”

German	built from	English twin
<i>der Frühling</i> (spring)	<i>früh</i> “early” + <i>-ling</i>	the “early”-season
<i>der Sommer</i> (summer)	native Germanic	summer
<i>der Herbst</i> (autumn)	native Germanic	harvest
<i>der Winter</i> (winter)	native Germanic	winter

All four are homegrown Germanic, and three are the plain twins of English *summer*, *winter*, and — the surprise — **harvest**.

Morphology Spotlight

Frühling is built from **früh** (“early”), a cousin of English **early**, plus the ending *-ling*: literally the “early-season,” the year’s first. (German also has **der Lenz**, an old poetic word for spring.)

The word, taken apart — and its English cousins

Herbst ↔ **harvest**. They are the same Germanic word: the *reaping* season. English kept *harvest* but narrowed it to the *act* of gathering, and reached for the Latin-derived **autumn** to name the season; German kept the old word for the season itself. Two languages, one word, split in meaning.

Why it’s said this way

So the German year splits cleanly: **Latin** for the months (like *die Uhr*, the clock), **native Germanic** for the seasons (like the numbers, and like *Mittag* “midday” and *Mitternacht* “midnight”).

Chapter 10

Family

Modes: ⇄ voice (2) ⇄ Hands-free start: all 2 lessons.

The months were Latin tourists. Family is the opposite story: German's words for father, mother, brother and sister were never borrowed — they are inherited, and they are blood cousins of the English ones. Along the way they put a famous sound-law on display.

10.1 *der Vater, die Mutter* — the pair that proves Grimm's law

Sounds you'll need

der Vater is said *FAH-ter*: note the spelling **V**, but it is pronounced f. **die Mutter** is said *MOO-ter*, with a short *u* as in English *put*.

Two words, with their articles:

German	English	from
<i>der Vater</i> (masculine)	father	PIE <i>*ph₂tér</i>
<i>die Mutter</i> (feminine)	mother	PIE <i>*méh₂tēr</i>

Grammar Lens

Grimm's law, on display. Grimm's law is the great sound-shift that split the **Germanic** languages (English, German, Dutch...) off from the rest of the family. Watch what it did to the *same* ancient words that Latin kept as *pater* and *māter*:

ph₂tér* → Latin *pater* (French *père*) vs. Germanic **father / **Vater**

méh₂tēr* → Latin *māter* (French *mère*) vs. Germanic **mother / **Mutter**

Etymology

p → **f**: Latin kept the *p* (*pater*); Germanic turned it into *f* — English **father**, German **V**ater (where the *V* is simply an old spelling of that *f* sound).

t → **th** → **d**: the middle consonant became English *th* (**mother**), and then, in German’s own later shift, *d/t* (**Mutter**).

Why it’s said this way

So German and English *agree* here — both start with *f*-, both with *m*- — precisely because they are **both Germanic**, while French and Latin sit on the other side of Grimm’s line. The month names were Latin tourists; *Vater* and *Mutter* are natives.

10.2 *der Bruder, die Schwester* — and the word for “siblings”

Sounds you’ll need

BROO-der; and **Schwester** is *SHVES*-ter — German *sch* spells an English *sh* sound, and the *w* that follows is said *v*, so *Schw*- = *shv*-.

The word, taken apart — and its English cousins

der Bruder (“brother”) ← PIE **b^hréh₂tēr* — the same root as Latin *frāter* (French *frère*), but here kept with a *b*- (Grimm’s law changed *b^h* → *b*), exactly like English **brother**.

The word, taken apart — and its English cousins

die Schwester (“sister”) ← PIE **swésōr*. The German *sch* spells an *sh* sound; strip it back and *Schwester* is English **sister** and Latin **soror** — all one root.

Morphology Spotlight

The collective — *die Geschwister*. German has a tidy word English lacks: **die Geschwister** = “**siblings**,” brothers-and-sisters together. It is built with the **ge-** prefix, an old **collective** marker (“a set of...”) attached to *Schwester* — the same *ge-* that bundles mountains into a **das Gebirge** (“a mountain range”), and that lets German gather a whole family into one word.

The four family words now stand as a Germanic set beside the Romance ones:

German	English	Romance
<i>Vater / Mutter</i>	father / mother	<i>père / mère</i>
<i>Bruder / Schwester</i>	brother / sister	<i>frère / sœur</i>

Why it's said this way

Why do these match English so closely? Because both languages are **Germanic**, drawing on the same ancient roots with no Grimm's-law gap between them. Months were *borrowed* from Latin; family is *inherited* Germanic.

Chapter 11

Bread, Water, Wine

Modes: ⇄ voice (2) ⇄ Hands-free start: all 2 lessons.

Three words from the table, and three different histories. Two of them German speakers have always had; one of them Rome carried north together with the plant it came from. On the way, the last of German's three genders finally appears.

11.1 *das Brot* — bread, and the third gender

Sounds you'll need

broht, with a long *o* as in English *boat*; the German *r* is made far back, in the throat.

Where the Romance sisters all say a version of Latin *pānis* (French *pain*, Italian *pane*), German goes its **own Germanic way**: *Brot*.

The word, taken apart — and its English cousins

das Brot (“bread”) ← old Germanic **braudam* — the same word that became English **bread**. No Latin here: this is a **native** word, like *Vater* and *Wasser*, out of the Germanic core the two languages share.

Grammar Lens

The third gender — *das*. You have met **der** (masculine, *der Vater*) and **die** (feminine, *die Mutter*). German has a **third**: **das**, the **neuter** — and *Brot* is one of its nouns: **das Brot**. So the article set is now complete: **der / die / das**.

Why it's said this way

German nouns are also always **Capitalized** — *Brot*, *Vater*, *Wasser* — a rule no other language in this book follows.

11.2 *das Wasser, der Wein* — one word

Germans always had, one Rome brought

Two drinks, two very different histories. *Wasser* is a word Germanic speakers have **always had**; *Wein* is one Rome **carried north** with the grapevine. Side by side, they show the difference between an *inherited* word and an ancient *loan*.

Sounds you'll need

In German the letter **w** is pronounced **v**: *Wasser* = VAH-ser, *Wein* = vine. And **ei** is always said like English *eye*.

The word, taken apart — and its English cousins

das Wasser (“water”) — the Grimm’s-law twin of English **water**: the same Germanic root **watar*, the same core meaning, both native. Like *Brot* and *Vater*, no Latin needed — and neuter, **das Wasser**.

Etymology

der Wein (“wine”) — here is the twist: *Wein* is **not** a native Germanic word. It was **borrowed from Latin *vīnum*** in Roman times, when the legions brought **viticulture** north of the Alps. The Germanic tribes took the drink *and its name* — which is exactly why English **wine**, German **Wein**, and Latin *vīnum* all match: they are one **loan**, not three cousins. (Masculine: *der Wein*.)

Why it's said this way

The lesson in one line: *Wasser* is a word Germans **always had**; *Wein* is a word Rome **gave** them — the vine came with a vocabulary.

German	English	history
<i>das Brot</i>	bread	inherited Germanic (<i>*braudam</i>)
<i>das Wasser</i>	water	inherited Germanic (<i>*watar</i>)
<i>der Wein</i>	wine	borrowed from Latin <i>vīnum</i>

Chapter 12

Numbers Eleven to Twenty

Modes: ⇐ voice (1) 👁 eyes (1) ⇐ Hands-free start: first 1 of 2 lessons.

Why are English *eleven* and *twelve* so strange? Why not “oneteen, twoteen”? German has the same oddity. Because the two languages are Germanic twins, learning one *explains* the other. At thirteen, both settle into a rule that never breaks.

12.1 *elf* und *zwölf* — “one left over,” “two left over”

Sounds you’ll need

elf is said as it looks. *zwölf* begins *tsv*- (German *z* = *ts*, *w* = *v*) and carries the rounded *ö*: shape your lips for *oh* and say *eh*.

Morphology Spotlight

elf (11) ← old Germanic *ainlif* = *ain* (“one”) + *lif*.

zwölf (12) ← *twalif* = *twa* (“two”) + *lif*.

And **-lif** means “**to leave, to remain**.” So *elf* = “**one left over**” and *zwölf* = “**two left over**.”

Left over from **what**? From **ten** — from your ten fingers. You count to ten, you run out of fingers, and you have **one left**. Eleven is literally the leftover.

The word, taken apart — and its English cousins

English says exactly the same thing: *eleven* ← *ain-lif*, *twelve* ← *twa-lif*. Not similar words — *the same words*, inherited side by side. The Germanic-twin pattern that turned up in *Vater/father* and *Wasser/water* reaches even the counting.

Grammar Lens

And then it stops. The leftover-trick covers only **two** numbers. From **13** on, German turns completely regular — and so does English.

12.2 *dreizehn* → *zwanzig* — the pattern that never breaks

After the two leftovers, German settles into a rule so regular you can generate every number without being taught it: **digit** + **zehn**. And English does the identical thing — because *-teen* **is** *ten*.

	German	English	build
13	<i>dreizehn</i>	thirteen	<i>drei</i> + <i>zehn</i>
14	<i>vierzehn</i>	fourteen	<i>vier</i> + <i>zehn</i>
15	<i>fünfzehn</i>	fifteen	<i>fünf</i> + <i>zehn</i>
16	<i>sechzehn</i>	sixteen	<i>sechs</i> + <i>zehn</i> (the <i>s</i> drops)
17	<i>siebzehn</i>	seventeen	<i>sieben</i> + <i>zehn</i> (shortened)
18	<i>achtzehn</i>	eighteen	<i>acht</i> + <i>zehn</i>
19	<i>neunzehn</i>	nineteen	<i>neun</i> + <i>zehn</i>
20	<i>zwanzig</i>	twenty	← <i>twaintig</i> , “two tens”

Sounds you’ll need

The *z* of *zehn* and *zwanzig* is *ts*: *TSAYN*, *TSVAHN-tsikh*. The final *-ig* of *zwanzig* is normally said like the soft *ich*-sound, *-ikh*.

Every one of them is a digit + *zehn* — and the English column is the same compound with *-teen*, which is just **ten** again (*thir-teen* = “three-ten”). Only two small wearings-down: *sech(s)zehn* and *sieb(en)zehn* clip a sound for easier speech, exactly as English *thir-* and *fif-* did to *three* and *five*.

Morphology Spotlight

zwanzig (20) ← *twaintig*, “**two tens**” — the *-zig* is another worn-down form of *ten*, matching English *twen-ty*, whose *-ty* is *ten* as well.

Why it’s said this way

The contrast worth noticing. The Romance sisters all **break** their pattern partway through the teens — Portuguese at 16, French and Italian at 17, swapping over to a “ten-and-six” style. **German never breaks.** Two leftovers, then one clean rule all the way to twenty — and English marches beside it the entire distance.

Chapter 13

Colours

Modes: ⇄ voice (2) ⇄ Hands-free start: all 2 lessons.

Four colours — *schwarz*, *weiß*, *rot*, *blau* — and a small surprise inside them. German’s colour words are all home-grown Germanic, with no Latin borrowed in; and two of them travelled the other way, out of Germanic and into the Romance languages.

13.1 *schwarz*, *weiß* — black and white, and the word German lent away

German’s colour words are **home-grown** — no Latin here. But one of them has a sibling that emigrated: a German word for “shining” became the word for **white** in French, Italian and Portuguese.

Sounds you’ll need

schwarz = *SHVARTS*: the *schw*- cluster is “sh” + “v,” and the final *z* is always “ts.”

weiß = *vice*: German *w* is English “v,” *ei* is the vowel of English *eye*, and the *ß* (*Eszett*) is a sharp “ss.”

The word, taken apart — and its English cousins

schwarz (“black”) ← Proto-Germanic **swartaz*. Its English cousin survives in **swarthy** (“dark-complexioned”). Further back it is related to Latin *sordēs* (“dirt”) — the root of English **sordid**. Black and grubby, from one idea.

The word, taken apart — and its English cousins

weiß (“white”) ← Proto-Germanic **hwītaz* — *exactly* English **white**.
The same word in different spelling clothes.

Sounds you’ll need

The ß (*Eszett*) marks a sharp *s* after a long vowel. So *weiß* rhymes with English *vice*, not with the second half of *vice-versa*. In Switzerland you will see it written **weiss** — the letter is optional there.

The word that emigrated

German also has **blank** — “shiny, polished, bare.” That word, in its Frankish form *blank* (“shining”), was **borrowed into Romance**, where it pushed Latin’s own *albus* out and became:

Language	“white”
French	blanc
Italian	bianco
Portuguese	branco
German	<i>blank</i> — still just “ shiny ”

Why it’s said this way

This is the **reverse** of the usual flow. Latin normally lends *to* Germanic (*Fenster* ← *fenestra*, *Wein* ← *vīnum*). Here Germanic lent *to* Latin’s daughters — and German kept the original meaning while they turned it into a colour.

Practise them on something you can already name: *der Wein ist weiß* (“the wine is white”), and *weiß* · *white* said side by side, so you can hear that it is one word.

13.2 *rot, blau* — an ancient cousin and a second emigrant

Two more native German colours. One is related to the French word for red — genuinely, not by borrowing. The other is a **second** German word the Romance languages took.

Sounds you'll need

rot = *roht*, with a long “o” as in English *road*.

blau = *blow* (rhyming with *cow*): German *au* is the vowel of English *house*.

The word, taken apart — and its English cousins

rot ← Proto-Germanic **raudaz* ← Proto-Indo-European **h₁rewdʰ-*. That root is one of the oldest colour words we can reconstruct, and it went everywhere:

Language	Word
German	rot
English	red , <i>rust</i> , <i>ruddy</i>
Latin	<i>ruber</i> , <i>rubeus</i> → French rouge , <i>ruby</i> , <i>rubric</i>

So *rot* and *rouge* are **cousins**, not borrowings — they split apart thousands of years before either language existed. Red is the colour humans name first, after black and white.

The word, taken apart — and its English cousins

blau ← Proto-Germanic **blēwaz*. Like *blank* in the last lesson, this word was **borrowed into Romance**.

Language	“blue”
German	blau
French	bleu
Italian	blu
English	blue — taken from French , not from German

Why it's said this way

English is the odd one here: it had Germanic *blāw* available but borrowed the French form instead. The word went Germanic → French → English, coming home in disguise. Portuguese went a different way entirely — its blue is **azul**, from **Arabic**.

The chapter in one table

German	Source	Did Romance borrow it?
<i>schwarz</i>	Germanic <i>*swartaz</i>	no
<i>weiß</i>	Germanic <i>*hwītaz</i>	no — but <i>blank</i> went instead
<i>rot</i>	Germanic <i>*raudaz</i>	no — Latin had its own cousin
<i>blau</i>	Germanic <i>*blēwaz</i>	yes — <i>bleu</i> , <i>blu</i>

Say all four together — *schwarz*, *weiß*, *rot*, *blau* — and then the cousins that prove the family: *rot* · *red* · *rouge*. Next chapter: putting these onto the things you already name.

Chapter 14

To Have, and How Old You Are

Modes: 🗣️ voice (1) 👁️ eyes (1) 🖐️ Hands-free start: none of the 2 lessons.

German’s workhorse verb *haben*, “to have” — which hides one of the best false cognates anywhere — and then the one everyday sentence where German *refuses* to use it, siding with English against every Romance sister.

14.1 *haben* — “to have,” the twin of English *have*

Sounds you’ll need

HAH-ben, with a long “a” as in English *father*. In *hast* and *hat* the vowel stays short and the final *t* is crisp.

Singular	Plural
ich habe	wir haben
du hast	ihr habt
er/sie hat	sie/Sie haben

Morphology Spotlight

Mostly regular, with **two irregulars**: *du hast* and *er hat* **drop the b**. English does the identical thing — *have* but *has*, and *hast* in older English. Two languages, one shortcut, inherited together.

The trap: *haben* is not *habēre*

Language	Verb	Meaning
German	haben	to have
Latin	habēre	to have

Same consonants, same meaning. **They are not related.** It is a coincidence — one of the most famous in linguistics.

The word, taken apart — and its English cousins

haben ← Germanic **habjanq* ← Proto-Indo-European **kap-*, “**to seize**.” That root’s Latin child is *capere* — which gives English **capture, captive, capable, accept**.

habēre ← Proto-Indo-European **g^habh-*, whose English descendant is... **give**.

So German *haben* is a cousin of **capture**, and Latin *habēre* — the source of French *avoir* and Italian *avere* — is a cousin of **give**. The two words that look most alike come from **opposite** directions.

Using it

German nouns are capitalised and take their gender:

Ich habe einen Bruder. — “I have a brother.”
Wir haben Brot und Wein. — “We have bread and wine.”

Say the whole set aloud — *ich habe, du hast, er hat, wir haben, ihr habt, sie haben* — listening for the dropped **b**: *habe ... hast ... hat*.

14.2 *ich bin zwanzig Jahre alt* — being your years

You have just learned *haben*. Here is the everyday sentence where German **won’t** let you use it — and where German and English stand alone against all four Romance languages.

Wie alt bist du? — literally “How old are you?”
Ich bin zwanzig Jahre alt. — “I am twenty years old.”

Word for word, that is the **English sentence**. Not a coincidence — both languages inherited the same way of saying it. You can shorten it to *Ich bin zwanzig*, exactly as English drops “years old.”

The word, taken apart — and its English cousins

Jahr ← Germanic **jēra* = English **year**.

alt ← Germanic **aldaz* = English **old**.

Alt has a Latin cousin too: *alere*, “to nourish, grow” — which gives English **adult** (“grown up”) and **old** itself. Growing and ageing, one idea.

Morphology Spotlight

Jahre is the plural of *Jahr*, and German capitalises it because it is a noun. The same word sits inside *Jahreszeiten* — “year’s-times,” the German word for the seasons.

The split, laid out

Language	How age works	Literally
German	<i>ich bin ... Jahre alt</i>	I am ...
English	<i>I am twenty</i>	I am ...
French	<i>j'ai vingt ans</i>	I have ...
Spanish	<i>tengo veinte años</i>	I have ...
Italian	<i>ho venti anni</i>	I have ...
Portuguese	<i>tenho vinte anos</i>	I have ...

Why it’s said this way

Romance has its years; Germanic is its years. Age as something you carry versus age as something you are — and German, which borrowed its month names from Latin, keeps its **own** logic here. The verb it uses is *sein* (*bin*), not *haben*; that verb gets a chapter of its own shortly.

Chapter 15

The Two Past Tenses

Modes: ⇄ voice (3) ⇄ Hands-free start: all 3 lessons.

German has two ways of talking about the past: the *Perfekt*, built from *haben* plus a wrapped-up participle, and the *Präteritum*, a single word with a *-te* on the end. They mean the same thing. What separates them is where you are and whether you are writing.

15.1 *ich habe gesagt* — the past built from “have”

German’s everyday past tense works almost exactly like the English perfect — except for two things German does that English doesn’t.

Morphology Spotlight

The recipe: **haben** (conjugated) + **past participle**, and the participle goes **last**.

Infinitive	Participle
<i>sagen</i>	gesagt
<i>machen</i>	gemacht
<i>lernen</i>	gelernt
<i>wohnen</i>	gewohnt

Regular (weak) verbs take **ge-** in front and **-t** behind. The participle is **wrapped**, not merely suffixed — what grammarians call a *circumfix*.

German	English
<i>ich habe gesagt</i>	I said
<i>du hast gesagt</i>	you said
<i>wir haben gesagt</i>	we said

Grammar Lens

1. The participle goes to the end. Not next to the verb — the *end of the clause*:

*Ich habe gestern Deutsch **gelernt**.*

(word for word: “I have yesterday German **learned**.”)

Everything else piles up in the middle, and the participle waits at the back. English cannot do this: “I have yesterday German learned” is not a sentence.

2. It means the plain past. *Ich habe gesagt* translates as “**I said**,” not only “I have said.” Where English keeps *I said* and *I have said* apart, spoken German mostly uses the *Perfekt* for both.

The *ge-* that English lost

The word, taken apart — and its English cousins

ge- ← Germanic **ga-*, a prefix meaning “**together, completely**.” It marked an action as **finished** — perfective — which is exactly what a past participle is for. English had it too, as *y-*, and then dropped it. Two fossils survive:

Word	Hiding inside
enough	Old English <i>genōg</i>
<i>yclept</i> (archaic, “named”)	<i>gecleopod</i>

So English once wrapped its participles the same way, and German simply never stopped. Say the wrap out loud — **ge-sag-t** — and then the fossil: *en-ough* ← *genōg*.

15.2 *ich sagte* — the simple past

German has a **second** past tense, the *Präteritum* — and choosing between the two is about **where you are** and **whether you are writing**, not about

meaning.

	<i>Präteritum</i>	<i>Perfekt</i>
I said	<i>ich sagte</i>	<i>ich habe gesagt</i>
I made	<i>ich machte</i>	<i>ich habe gemacht</i>
I had	<i>ich hatte</i>	<i>ich habe gehabt</i>

Weak verbs add **-te**. Same meaning as the *Perfekt*; different register.

Morphology Spotlight

That **-te** is the **dental preterite** — the Germanic way of making a past tense by adding a *t/d* sound:

German: *sag* → *sagte*

English: *walk* → *walked*

Dutch: *werk* → *werkte*

This is a **Germanic invention**. Latin had nothing like it — Romance builds its past from inherited perfect endings instead. So *sagte* and *walked* are the same machinery, and French *parla* or Spanish *habló* are a completely different one.

Who says which

Tense	Where it lives
<i>Perfekt</i>	everyday speech — dominant, especially in the south
<i>Präteritum</i>	rarer in speech; standard in narrative writing

The *Präteritum* has largely vanished from conversation in southern Germany, Austria and Switzerland. Further north it survives better; in books, it is the normal past tense. A few verbs resist everywhere: *war*, *hatte*, and the modal verbs stay common even in speech.

The same retreat, three times

Language	Simple past	Replaced in speech by
German	<i>Präteritum</i>	<i>Perfekt</i>
French	<i>passé simple</i>	<i>passé composé</i>
Italian	<i>passato remoto</i>	<i>passato prossimo</i>

Why it's said this way

Two Romance languages and one **Germanic** one, doing the same thing over the same centuries — and **not** by coincidence. Southern Germany, France and northern Italy are **neighbours**, and the change spread through that connected block by **contact**. Linguists call this an *areal* change: it travels across language boundaries because the speakers do, which is why a Germanic language and two Romance ones line up here while Spanish and Portuguese, out at the **western edge**, largely kept their simple past. It also explains the map *inside* German: the *Präteritum* is weakest in the **south**, nearest the centre of the change, and strongest in the north.

Practise the pair back to back — *ich **sagte** ... ich **habe gesagt**, Er machte das ... Er hat das gemacht* — and hear that nothing about the meaning has moved. Next: the verbs that build their perfect with *sein*, not *haben*.

Chapter 16

I Am, You Are

Modes:  voice (8)  eyes (1)  Hands-free start: first 8 of 9 lessons.

By the end of this chapter: I can say what someone is in German, using any of the six present forms of the verb for “to be” — and say that I am tired.

sein is the one German verb whose forms cannot be guessed from its infinitive, so this chapter meets them one at a time — bin, bist, ist, sind, seid, sind — and only assembles the grid once every cell has had its own lesson. It closes with müde, the adjective that finishes ich bin, and a short exchange that runs on nothing but this verb.

16.1 sein — “to be”

You have met the German verb for *to have*. Here is its partner — the most irregular verb in German, and the one verb whose forms you will not be able to guess.

You’ll want to know: sein

sein — “to be.”

The **-en** on the end is the infinitive ending you already own from *gehen* and *sehen*: the dictionary form of a German verb wears it, and *sein* wears it too.

That is where the resemblance stops. *Gehen* and *sehen* keep their stem in every form — *ich gehe*, *ich sehe*. *Sein* keeps nothing. Not one of its present forms contains the letters *s-e-i-n* in that order.

This is the only verb in the book that has to be met one form at a time, and the next several lessons do exactly that: one form each, said until it is automatic, before any of them are ever seen side by side.

Sounds you'll need

- **s-voiced** — a German **s** before a vowel buzzes like English **z**, exactly as it does in *sehen*. So *sein* opens with a **z**.
- **diphthong-ei** — German **ei** is the vowel of English *eye*, never “ee”.
- **final-t** — worth having ready now, because two of the forms coming up end in a crisp, fully released **t**.

Put together, *sein* sounds like English **zine**.

Your turn

Say these aloud:

- “sein” (*zine*) — buzzing **z**, *ei* as in *eye*
- “gehen, sehen, sein” — three infinitives, one ending
- “sein — to be”

Twice through: “sein, sein — *zine*.”

Before you move on

What does *sein* mean? (“**To be**.”) Which ending does it share with *gehen* and *sehen*? (**-en**, the infinitive.) How does the *s* sound? (Like English **z**.) And the *ei*? (Like English **eye**.) Next: the first form, and it looks nothing like the word you just learned.

16.2 ich bin — “I am”

You have *ich*, and you have the infinitive *sein*. Put them together and you get a form that shares no letters with either half of that sentence except the *i*.

You'll want to know: *ich bin*

ich bin — “I am.”

One syllable, short *i*, ordinary *b*, ordinary *n*. There is no rule behind it and nothing to derive it from: *bin* is simply the form that goes with *ich*, and it is learned the way you learned *hallo*.

It rhymes with English *bin*, and that rhyme is not an accident — see below.

Sounds you'll need

- **ich-laut** — *ich* still ends in the soft breathy sound you met when you first said “I”: tongue where it sits for *ee*, air pushed past it, no scrape.
- **i-short** — the *i* of *bin* is short and clipped, the vowel of English *bin*, not the long *ee* of *ihm*.

The word, taken apart — and its English cousins

Bin rhymes with English *be* for a reason, even though the vowels have drifted apart. Both come from Proto-Indo-European ***b^huH-** — “to grow, to become.”

So German kept that ancient root in the **present tense** and English kept it as the **infinitive**: *be* and *bin* are the same old word wearing different jobs. Hold on to that; two lessons from now it explains something about the whole verb.

Your turn

Say these aloud:

- “ich bin” — short *i*, soft ending on *ich*
- “ich bin Anna.” “ich bin Peter.”
- “bin — be” — the same old root

Twice through: “ich bin, ich bin.”

Before you move on

Say “I am.” (**Ich bin.**) Is the *i* of *bin* long or short? (**Short** — English *bin.*) Which English word comes from the same root as *bin*? (**Be.**) Next: the same verb for the person you are talking to.

16.3 du bist — “you are”

Du is the familiar “you” — the one for a friend. Its verb ending is **-st**, and for once *sein* uses it.

You’ll want to know: du bist

du bist — “you are.”

Take *bin*, drop the *n*, add the familiar **-st**: *bi-* plus *-st* is *bist*. That is the same ending as *du gehst*, *du heißt*, *du siehst*.

Of the six present forms of *sein*, this is the only one that can be derived from another one. Enjoy it; it does not happen again.

Sounds you’ll need

- **u-long** — *du* has a long, rounded **oo**, the vowel of English *do*, held.
- **final-t** — German releases a final **t** fully and audibly. *Bist* ends with a small puff of air; English tends to swallow it.

Your turn

Say these aloud:

- “du bist” — long *u*, crisp final *t*
- “ich bin ... du bist” — the pair
- “du bist Peter.”

Twice through: “ich bin, du bist.”

Before you move on

Say “you are,” to a friend. (**Du bist.**) Which ending is that? (**-st**, the familiar one.) Which form is *bist* built on? (***Bin.***) Is the final *t* released or swallowed? (**Released.**) Next: the form for everybody else.

16.4 er ist — “he is”

Bin and *bist* both start with *b*. The third form does not, and it is the one you will hear most.

You’ll want to know: er ist

er ist — “he is.”

er is “he.” The same **ist** serves three more subjects without changing at all: **sie ist** (“she is”), **es ist** (“it is”), and **das ist** (“that is”) — *es* and *das* both already yours.

So one two-letter word covers everything that is not *ich* and not *du*, in the singular. It is the workhorse of the whole verb.

Sounds you’ll need

- **r-final** — the *r* at the end of *er* is not a full English *r*. It softens towards a vowel, close to *air* said without the tongue curling.
- **final-t** — *ist* ends in the same released **t** as *bist*.

The word, taken apart — and its English cousins

Ist is the one form of *sein* whose relatives you can name on sight:

language	“is”
German	ist
English	is
Latin	<i>est</i>
French	<i>est</i>

All from Proto-Indo-European ***h₁es-**, “to be” — and the infinitive **sein** is built on that root too. So *sein* and *ist* really do belong to each

other; it is *bin* and *bist* that came from somewhere else.

Your turn

Say these aloud:

- “er ist, sie ist, es ist”
- “Das ist gut.” — “that is good”
- “ich bin, du bist, er ist”

Twice through: “Das ist gut.”

Before you move on

Say “he is.” (**Er ist.**) Which other subjects take the same form? (**Sie, es, das.**) Say “that is good.” (**Das ist gut.**) Which Latin word is *ist*? (**Est.**) Next: the form for more than one.

16.5 wir sind — “we are”

Three singular forms down. The plural starts here, and after *bin*, *bist*, *ist*, this one will finally look like the verb it belongs to.

You’ll want to know: wir sind

wir sind — “we are.”

wir is “we.” And **sind** shares its first two letters with the infinitive *sein*, which is the first visible family resemblance in this verb.

Its Latin twin is *sunt*, “they are” — same **s**, same **n**, same closing stop, the same root wearing a different vowel.

Sounds you’ll need

- **w-as-v** — German **w** is English **v**. *Wir* begins like *veer*.
- **ie-long-ee** — **ie** is a long **ee**. *Wir* is *veer*, not *wire*.
- **d-t-final** — the **d** at the end of *sind* is spoken as a **t**, the same final devoicing you met on *und*. Say *zint*.

Your turn

Say these aloud:

- “wir sind” — *veer zint*, final *d* as *t*
- “wir sind gut.”
- “sein ... sind” — the family resemblance

Twice through: “wir sind, wir sind.”

Before you move on

Say “we are.” (**Wir sind.**) How is the final *d* pronounced? (As a **t**.) How does *wir* begin? (Like English **v**.) Which Latin word is *sind*? (**Sunt.**) Next: the plural “you.”

16.6 ihr seid — “you are,” to several people

Du is one friend. For two or more friends German has a separate word, and English used to have one as well.

You’ll want to know: ihr seid

ihr seid — “you are,” said to more than one person you would each call *du*.

ihr is the familiar plural “you” — a crowd of friends, a group of children, your own family. English once had *ye* here and let it go, which is why one English *you* now does the work of four German words.

seid opens exactly like the infinitive: *sei-* is *sein* without its *n*. Both the *s* and the *ei* behave as they did there.

Sounds you’ll need

- **ie-long-ee** — *ihr* is *eer*, one long vowel; the *h* only stretches it.
- **s-voiced** — *seid* opens with the buzzing **z** of *sein*.
- **diphthong-ei** — and carries the *eye* vowel through. Say *zite*.

Wir sind and *ihr seid* are the two plural forms, and they sound nothing alike, which makes them easy to keep apart.

Your turn

Say these aloud:

- “ihr seid” — *eer zite*
- “wir sind ... ihr seid”
- “sein ... seid” — the same opening

Twice through: “ihr seid, ihr seid.”

Before you move on

Say “you are” to a group of friends. (**Ihr seid.**) Which English word did that job before English dropped it? (**Ye.**) Which part of *seid* comes straight out of *sein*? (**sei-**.) Next: the last form, and the one that does double duty.

16.7 sie sind / Sie sind — “they are,” and “you are,” politely

The polite **Sie** is literally the word for “they,” worn as a courtesy. Its verb form follows from that, and costs you nothing new.

You’ll want to know: sie sind and Sie sind

sie sind — “they are.” **Sie sind** — “you are,” to someone you would address formally.

The form is **sind**, the very same word you learned for *wir*. Nothing changes in the mouth at all: *wir sind*, *sie sind*, *Sie sind* are three subjects and one verb form.

Grammar Lens: the capital carries the politeness

On the page, *sie* and *Sie* differ by exactly one capital letter — and German already spends capitals on grammar rather than decoration. In speech there is no difference at all; the context tells you which one is meant.

written	means
<i>sie sind</i>	they are
<i>Sie sind</i>	you are, formally
That is the whole of it. Six subjects, and you have now met every present form of the verb.	

Your turn

Say these aloud:

- “sie sind” — “they are”
- “Sie sind Herr Peter Schmidt?” — politely
- “wir sind, sie sind, Sie sind” — one form, three subjects

Twice through: “sie sind, Sie sind.”

Before you move on

Say “they are.” (**Sie sind.**) Say “you are” to a stranger. (**Sie sind** — same sound.) What separates the two on paper? (**The capital S.**) How many different present forms of this verb have you now met? (**Five** — *bin, bist, ist, sind, seid.*) Next: one adjective, so you can finally say something about yourself.

16.8 müde — “tired”

Ich bin is a sentence waiting for one more word. Here is the word that finishes it most often.

You’ll want to know: müde

müde — “tired.”

Ich bin müde. — “I am tired.”

Two syllables, stress on the first: *mü-duh*. It is an adjective, and after *sein* an adjective takes **no ending at all** — the same bare form serves every subject. *Ich bin müde, du bist müde, wir sind müde.*

That is worth noticing, because German adjectives are famous for their endings. They only take them in front of a noun. Standing after *sein*, they stand still.

Sounds you'll need

- **umlaut-ue** — **ü** is the vowel you make by rounding your lips for *oo* and then saying *ee* without moving them. The dots are the fronting mark you already know: the mouth shifts forward, the lips stay round.

The final **-e** is a soft *uh*, never silent. *mü-duh*, two beats, the weight on the first.

Your turn

Say these aloud:

- “müde” — round the lips, say *ee*
- “Ich bin müde.”
- “Er ist müde. Wir sind müde.” — the adjective never changes

Twice through: “Ich bin müde.”

Before you move on

Say “I am tired.” (**Ich bin müde.**) How do you make the **ü**? (**Round for oo, say ee.**) Does *müde* change after *sein*? (**No** — no ending.) Say “we are tired.” (**Wir sind müde.**) Next: everything at once, on purpose.

16.9 Practice — the whole present of sein

No new words. Every form below has had its own lesson, so this is the first time it is safe to put them all on one page — as a recap, not as something to memorise from cold.

Grammar Lens: the six forms, assembled

singular

ich **bin**
 du **bist**
 er/sie/es **ist**

plural

wir **sind**
 ihr **seid**
 sie/Sie **sind**

Six subjects, five different forms — *sind* does double duty. Look at that with fresh eyes now that you can say all of it: *bin* and *ist* do not look like forms of the same word, and the next chapter explains why they aren't.

The exchange

German

Hallo! Wie geht es dir?
Danke, ich bin müde.
Du bist müde? Ich auch.
Dann sind wir müde. Aber das ist gut.
Bis morgen!

English

Hello! How are you?
 Thanks — I am tired.
 You are tired? Me too.
 Then we are tired. But that is good.
 See you tomorrow!

Three small joining words slip in there without needing lessons of their own, because each can be read straight off the translation: **auch** (“too”), **dann** (“then”) and **aber** (“but”).

Your turn

Say these aloud:

- the six in order — “ich bin, du bist, er ist, wir sind, ihr seid, sie sind”
- the same six backwards
- “Ich bin müde.” “Du bist müde.” “Wir sind müde.”
- the whole exchange, both voices

Twice through: “ich bin, du bist, er ist, wir sind, ihr seid, sie sind.”

Before you move on

Run the six forms without looking. Which one form covers *wir*, *sie* and *Sie*? (***Sind***.) Which is the only form built out of another one? (***Bist***, from *bin*.) Say “that is good.” (***Das ist gut***.) Say “you are tired” to a group. (***Ihr seid müde***.) Next: where these forms came from — three different verbs, none of them each other.

Chapter 17

Three Verbs Under One Roof

Modes: ⇄ voice (8) ⇄ Hands-free start: all 8 lessons.

By the end of this chapter: I can put the German verb for “to be” into the past, and say why its forms look like three unrelated words — because they are.

The past of sein is the tidy half of the verb: one stem war-, ordinary endings, and ich war identical to er war. The chapter teaches those four cells one at a time and then answers the question the present tense raised — bin, ist and war come from three different Proto-Indo-European verbs, which is called suppletion, and it survives because the words you never have to guess at are the words analogy never reaches.

17.1 ich war — “I was”

You know the simple past is mostly a written tense in German, and that a handful of very common verbs keep it in speech. This is the most common of them.

You’ll want to know: ich war

ich war — “I was.”

Nobody says *ich bin gewesen* in ordinary speech when *ich war* will do. This is the past-tense form Germans actually use, in every region, out loud.

And hear the shape of it. *Bin* has a *b*. *Ist* has an *s* and a *t*. *War* has a *w* and an *r*, and no sound in common with either. That is now three completely unlike stems inside one verb.

Sounds you'll need

- **w-as-v** — German **w** is English **v**, so *war* begins like *var*.
- **vowel-a-long** — the **a** is long and open, the *a* of English *father*.
- **r-final** — the final **r** softens towards a vowel rather than curling.

The result sounds close to English *var*, and nothing like English *war*.

Your turn

Say these aloud:

- “ich war” — *var*, long open *a*
- “ich bin ... ich war” — now and then
- “Ich war müde.”

Twice through: “ich bin, ich war.”

Before you move on

Say “I was.” (**Ich war.**) How does the *w* sound? (Like English **v**.) Is this form used in speech or only in writing? (**In speech, everywhere** — it is one of the survivors.) How many unlike stems does this verb now have? (**Three.**) Next: the same form for *du*.

17.2 du warst — “you were”

You have *ich war*. The familiar “you” wants the ending it always wants.

You'll want to know: du warst

du warst — “you were.”

War plus **-st**, with nothing else moved. The same ending that made *bist* out of *bin*, and *gehst* out of *gehen*.

So the past tense of this verb is better behaved than its present: you take one stem, *war-*, and add ordinary endings to it. Everything difficult about *sein* happens in the present.

Sounds you'll need

- **u-long** — *du* keeps its long rounded **oo**.
- **final-t** — and *warst* ends on the fully released **t** German always gives you, after the *s*. Say the *s* and the *t* both: *varst*.

Your turn

Say these aloud:

- “du warst” — *varst*, both consonants released
- “ich war ... du warst”
- “du bist ... du warst” — now and then

Twice through: “ich war, du warst.”

Before you move on

Say “you were,” to a friend. (**Du warst.**) Which ending is that? (**-st.**) Which stem is it added to? (**War-**) Is the past of this verb regular or irregular in its endings? (**Regular** — one stem, ordinary endings.) Next: the form for everyone else, and a surprise.

17.3 er war — “he was”

In the present, *ich* and *er* took different words — *bin* against *ist*.
In the past they take the same one.

You'll want to know: er war

er war — “he was.”

Not a new form. It is *war*, unchanged, the very word you learned for *ich*. And as with *ist*, it covers **sie war** (“she was”), **es war** (“it was”) and **das war** (“that was”) as well.

This is a habit of the German simple past, not a quirk of this verb: the I-form and the he-form are always identical there. *Ich sagte* and *er sagte*. *Ich hatte* and *er hatte*. The present tense never does this; the past always does.

Sounds you'll need

- **r-final** — two softening *r* sounds in a row now, one closing *er* and one closing *war*. Neither curls.
- **vowel-a-long** — and the long open **a** between them carries the phrase.

Your turn

Say these aloud:

- “er war, sie war, es war”
- “Das war gut.”
- “ich war ... er war” — the same word twice

Twice through: “Das war gut.”

Before you move on

Say “he was.” (**Er war.**) How is it different from *ich war*? (**It isn't** — same word.) Does the present do that? (**No** — *bin* against *ist*.) Say “that was good.” (**Das war gut.**) Next: the plural.

17.4 wir waren — “we were”

One more form, and the verb is finished — present and past, all of it.

You'll want to know: wir waren

wir waren — “we were.”

War plus the plural ending **-en**, the one *wir* takes on every verb. And just as *sind* served three subjects at once, *waren* covers **sie waren** (“they were”) and **Sie waren** (“you were,” politely) with no change.

The one plural form left over is **ihr wart**, for a group of friends. It takes the plural-*you* **-t**, and it is the rarest form in the whole verb.

The word, taken apart — and its English cousins

English does the identical thing and nobody notices:

	German	English
singular	<i>war</i>	was
plural	<i>waren</i>	were

An **s** in the singular, an **r** in the plural, in both languages, inherited from the same ancestor. English *was/were* and German *war/waren* are the same pair of words.

Your turn

Say these aloud:

- “wir waren, sie waren, Sie waren”
- “ich war, du warst, er war, wir waren”
- “war — was; waren — were”

Twice through: “ich war, wir waren.”

Before you move on

Say “we were.” (**Wir waren.**) Which English pair matches *war/waren*? (**Was/were.**) What is the plural ending on it? (**-en.**) Say “they were.” (**Sie waren.**) Next: why one verb needed three different stems.

17.5 bin, ist, war — three verbs under one roof

Say *bin*, *ist*, *war* one after another. They do not look like forms of the same word — and they aren’t.

The word, taken apart — and its English cousins

Three separate Proto-Indo-European verbs each handed German a slice of this paradigm, and each of them left cousins in languages you

can check:

forms	from	which also gave
ist, sind, seid, sein	* <i>h₁es-</i> — “to be”	Latin <i>est, sunt</i> ; French <i>est, sont</i>
bin, bist	* <i>b^huH-</i> — “to grow, become”	English be ; Latin <i>fuī</i>
war, waren	* <i>wes-</i> — “to dwell, remain”	English was, were

Read the middle row again. **b^huH-* did not mean “to be” at all. It meant “to grow” — and the reason English says *be* and German says *bin* is that a verb about growing got promoted into a verb about existing, in both languages, before either of them existed.

The bottom row is the same story with a different verb: **wes-* meant “to dwell, to remain.” Staying somewhere became having been.

Why it’s said this way

Bin has a cousin further afield than English. Latin *fuī*, “I was,” is from the same **b^huH-* — and *fuī* is the direct source of Spanish **fui**, “I was / I went.”

So German *bin* and Spanish *fui* are the same ancient word. One landed in the present tense, the other in the past, and the two languages now use it to mean opposite ends of time.

Your turn

Say these aloud:

- the three roots — “ist from **h₁es-*, bin from **b^huH-*, war from **wes-*”
- “ist — est — is”
- “war — was; waren — were”
- the cousin abroad — “German bin, Spanish fui, one root”

Before you move on

How many ancient roots is *sein* built from? (**Three.**) Which one gives *ist* — and which Latin word proves it? (**h₁es-*; Latin *est*.)

What did the root behind *bin* originally mean? (“**To grow, to become.**”) Which Spanish word shares it? (***Fui.***) Which root gives English *was* and *were*? (****wes-***, the same one as *war.*) Next: the name for what this verb is doing.

17.6 Suppletion — filling a verb in from another verb

Three roots, one verb. There is a name for that, and once you have it you will find the same thing in English.

Grammar Lens: what suppletion is

When one verb’s forms are filled in from a **different** verb, that is **suppletion**.

Sein has no forms of its own for “I am” or “I was.” It borrowed them, long ago, from two other verbs, and then all three grew together into a single paradigm that native speakers use without ever noticing the seam.

The word, taken apart — and its English cousins

English does the identical thing with its own commonest verbs, and you have never thought twice about it:

present	past	where the past came from
go	went	<i>wend</i> , a different verb entirely
am	was	the same * <i>wes-</i> that gave German <i>war</i>
good	better	a different word again

Went belonged to *wend* — “to make one’s way,” still alive in *wend your way*. English took it, gave it to *go*, and left *wend* with a regular past of its own. That is precisely what German did to build *sein*. Suppletion is not a German oddity, and it is not rare. It is simply what languages do to the words they use most — and every language you have looked at in this book has done it to its verb for “to be.”

Your turn

Say these aloud:

- the definition — “one verb’s forms, filled in from another verb”
- “go, went” — English doing it
- “bin, war” — German doing it

Before you move on

What is suppletion? (**One verb’s forms filled in from another verb.**) Name the English example. (*Go* / *went*.) Which verb did *went* actually belong to? (*Wend*.) How many verbs are hiding inside *sein*? (**Three.**) Next: why this always happens to the commonest words.

17.7 Why “to be” is the messiest word in every language

Every language you have ever met has a broken verb for “to be.” That is too consistent to be an accident, and it isn’t one.

Grammar Lens: frequency protects irregularity

The most-used words are the most irregular.

Regularity spreads by **analogy**. You meet an unfamiliar verb, you do not know its forms, so you guess them from the pattern — the *-e*, *-st*, *-t*, *-en* machine you learned early. Guess often enough and the guess becomes the form: the odd old shape is sanded down and the verb joins the regular crowd.

But you never have to guess at “to be.” You hear it a hundred times a day, from the day you start speaking. Every one of those hearings reinforces the strange shape faster than analogy can wear it away. Rare words get regularised. Common words are protected fossils.

Why it's said this way

This also tells you where the irregularity will sit inside a verb, and *sein* proves it. Its present tense — the part you say constantly — is the wreckage: three roots, five unlike forms. Its past tense, which you say far less often, has quietly become well-behaved: one stem *war-*, ordinary endings, *warst* built exactly like *bist* was not.

So the mess is not spread evenly. It clusters where the traffic is.

The practical consequence is a comfort. There is no long list of verbs this strange, because a verb has to be *this* common to survive being this strange — and there are only a handful of words in any language that common.

Your turn

Say these aloud:

- the rule — “the most-used words are the most irregular”
- why — “you never have to guess at them”
- “bin, bist, ist” against “war, warst, waren” — mess, then order

Before you move on

State the rule. (**The most-used words are the most irregular.**)

What spreads regularity? (**Analogy** — guessing from the pattern.)

Why does analogy never reach “to be”? (**You never have to guess at it.**) Which half of *sein* is the tidy half? (**The past** — one stem, ordinary endings.) Next: the chapter together.

17.8 Practice — was, were, and why

No new words. Present and past, side by side, and then the account of how one verb ended up like this.

Grammar Lens: the past, assembled

Six forms, one stem, four endings, no surprises. Said in order:

- **ich war, du warst, er war** — and the first and third are the same word, which the present tense would never allow;

- **wir waren, ihr wart, sie waren.**

Compare that with the present, where five different shapes came from three different verbs. The past of *sein* is the part of the paradigm that behaved.

The exchange

German	English
<i>Wo warst du?</i>	Where were you?
<i>Ich war in Berlin.</i>	I was in Berlin.
<i>Wie war es?</i>	How was it?
<i>Es war gut. Aber ich bin müde.</i>	It was good. But I am tired.

Wo (“where”) and *in* are read straight off the English here; neither is asked of you yet.

Your turn

Say these aloud:

- “ich war, du warst, er war, wir waren, ihr wart, sie waren”
- the pairs — “ich bin / ich war”, “wir sind / wir waren”
- the three roots — “ist, bin, war — three verbs”
- the whole exchange, both voices

Twice through: “Wie war es? Es war gut.”

Before you move on

Run the six past forms. Which two are identical? (*Ich war* and *er war*.) Name the three roots this verb is built from, by their German forms. (*Ist, bin, war*.) What is the technical name for that? (**Suppletion.**) Why has nothing tidied this verb up? (**It is too common — you never guess at it, so analogy never reaches it.**) Next: the past tense that is built on this verb rather than out of it.

Chapter 18

The Past That Takes To Be

Modes:  voice (8)  eyes (1)  Hands-free start: first 8 of 9 lessons.

By the end of this chapter: I can build the German past of verbs of motion and change with the verb for “to be” instead of the verb for “to have”, and say why the participle never changes.

Motion and change of state build their perfect on sein rather than haben — ich bin gegangen beside ich habe gelernt. The chapter teaches the rule, then the four verbs that follow it (kommen, fahren, werden, bleiben), then the short list that has to be learned outright, and finally the one place German is simpler than French: the participle in the perfect agrees with nothing at all.

18.1 ich bin gegangen — the perfect built on sein

You built the everyday past with *haben* — **ich habe gelernt**. A particular family of verbs refuses *haben* and takes this chapter’s verb instead.

Grammar Lens: which verbs take sein

Verbs of **motion** and **change of state** build their perfect with **sein**, not *haben*.

An action that leaves you somewhere else, or leaves you something else, takes *sein*. An ordinary activity that leaves you where you were keeps *haben*: *ich habe gearbeitet, ich habe getanzt*.

Gehen is the model, and because every present form of *sein* now belongs to you, the whole thing reads off without a single new word:

German	English
<i>ich bin gegangen</i>	I went / I have gone
<i>du bist gegangen</i>	you went
<i>er ist gegangen</i>	he went
<i>wir sind gegangen</i>	we went
The recipe is the one you already know, with the helper swapped: present form of sein + past participle, and the participle goes last	

Sounds you'll need

- **ge-prefix** — *gegangen* opens with the same unstressed **ge-** that wrapped *gelernt* and *gesagt*. It is never stressed; the weight falls on *-gang-*.
- **ich-laut** — and *ich* keeps its soft ending right before it, so the phrase runs *ich bin ge-GANG-en* without a break.

Your turn

Say these aloud:

- “*ich bin gegangen; du bist gegangen; er ist gegangen; wir sind gegangen*”
- the contrast — “*ich habe gelernt ... ich bin gegangen*”
- the rule — “motion and change take *sein*”

Twice through: “*ich bin gegangen.*”

Before you move on

Which family of verbs takes *sein*? (**Motion and change of state.**) Say “I went.” (**Ich bin gegangen.**) Where does the participle sit? (**At the end.**) Which helper does *arbeiten* take? (**Haben** — it is an activity, not a change.) Next: the first of the family, and it is the one you say most.

18.2 kommen — “to come”

Motion takes *sein*. Here is the motion verb you will use as often as *gehen*, and it is an English word you already own.

You’ll want to know: kommen

kommen — “to come.”

ich bin gekommen — “I came.”

The infinitive wears the **-en** you know. The participle is **gekommen**: the *ge-* wrap in front, and *-en* rather than *-t* at the back, because this is one of the old strong verbs rather than a regular one.

Coming is arriving somewhere you were not. That is motion with a result, so it takes *sein*, exactly as *gehen* does.

The word, taken apart — and its English cousins

kommen and English **come** are the same word, both from Germanic **kwemanq*. No Latin anywhere in the line — French *venir* and Spanish *venir* come from Latin *venire* instead, which is where English gets *advent*, *convene* and *venue*. So English, as usual, owns both halves: the everyday **come** from the Germanic side, the formal **convene** from the Latin.

Sounds you’ll need

- **vowel-o** — the **o** is short and open, the vowel of English *cot*, not the *uh* English puts in *come*.
- **ge-prefix** — *gekommen* keeps the unstressed **ge-**; the stress is on **-KOMM-**.

Your turn

Say these aloud:

- “kommen” — short open *o*
- “ich bin gekommen”
- “ich bin gegangen ... ich bin gekommen”

Twice through: “ich bin gekommen.”

Before you move on

What does *kommen* mean? (“**To come.**”) Say “I came.” (**Ich bin gekommen.**) Which helper, and why? (***Sein*** — it is motion.) Which English word is it? (**Come.**) Next: the verb that covers everything with a vehicle under it.

18.3 fahren — “to travel, to drive”

Gehen is going on your feet. When there is a vehicle under you, German changes the verb.

You’ll want to know: fahren

fahren — “to travel, to go by vehicle, to drive.”

ich bin gefahren — “I travelled, I drove.”

German keeps two verbs where English makes do with *go*. You **gehen** on foot and you **fahren** in anything with wheels — a car, a bus, a train, a bicycle. Getting that pair right is one of the first things that makes a learner sound German rather than translated.

It is motion, so the helper is *sein*.

Sounds you’ll need

- **vowel-a-long** — the **a** is long and open, as in *war*.
- **h-silent-lengthening** — and the **h** after it is the silent stretcher you met in *gehen* and *sehen*: it is not breathed, it only holds the vowel. *FAH-ren* rhymes with the way *gehen* and *sehen* are built.

The word, taken apart — and its English cousins

fahren is English **fare** — the old verb meaning “to travel,” which English demoted to a noun and then almost forgot. It is still there in:

English word	what it is really saying
farewell	travel well
thoroughfare	a way you can travel through
seafaring	sea-travelling
the fare you pay	what the travelling costs
So <i>auf Wiedersehen</i> and <i>farewell</i> are built the same way: both are a wish handed over at the door, one about seeing again, one about travelling well.	

Your turn

Say these aloud:

- “fahren” — long *a*, silent *h*
- “ich bin gefahren”
- the pair — “gehen on foot, fahren with wheels”
- “fahren — fare — farewell”

Twice through: “Ich bin gefahren.”

Before you move on

What does *fahren* mean? (“**To travel, to go by vehicle.**”) Which verb would you use walking to the shop? (***Gehen.***) Say “I drove.” (***Ich bin gefahren.***) Which English word is *fahren*? (**Fare** — as in *farewell*.) Next: the verb for becoming something else.

18.4 werden — “to become”

The rule has two halves. *Gehen, kommen* and *fahren* are the motion half. This one word is the whole of the other half.

You’ll want to know: werden

werden — “to become.”

ich bin geworden — “I became.”

Sein says what you are. *Werden* says what you turn into. Where *sein* sits still, *werden* moves — and that is exactly why it takes *sein* as its helper: becoming is change of state in its purest form.

Ich bin müde geworden. — “I got tired.”

Notice what that sentence does. The adjective you learned with *sein* now describes an arrival rather than a condition. German makes the difference with the verb; English does it with *be* against *get*.

Sounds you'll need

- **w-as-v** — the **w** is English **v**, as in *war* and *wir*.
- **d-t-final** — and in **wird** (“he becomes”) the final **d** devoices to a **t**, the same rule that turned *sind* into *zint*.

The word, taken apart — and its English cousins

werden is a lost English verb — *weorthan*, “to turn, to come to be” — and its bones are still in the language:

English	the buried meaning
toward	turning to
backward	turning back
worth	what a thing turns out to be

So *werden* means “to turn into,” and every time you say *toward* you are using the same root without knowing it.

Your turn

Say these aloud:

- “werden” — *VAIR-den*
- “ich bin geworden”
- “Ich bin müde geworden.” — “I got tired”
- “werden — toward — worth”

Twice through: “Ich bin müde geworden.”

Before you move on

What does *werden* mean? (“**To become.**”) Why does it take *sein*? (**It is change of state** — the other half of the rule.) Say “I became.” (**Ich bin geworden.**) Which English words hide the same root? (**Toward, backward, worth.**) Next: the two verbs that break the rule by standing still.

18.5 bleiben — “to stay”

Werden takes *sein* because it is pure change. This verb takes *sein* too — and it means staying exactly where you are.

You’ll want to know: bleiben

bleiben — “to stay, to remain.”

ich bin geblieben — “I stayed.”

By the rule as stated, this verb should take *haben*. Staying is not motion and it is not change; it is the absence of both. It takes *sein* anyway, and every German learner meets it as a fact rather than a consequence.

The honest way to hold it: *bleiben* is on the *sein* list because it is about **where you are** rather than **what you do**, and that is the deeper thing the motion rule was pointing at all along.

Sounds you’ll need

- **diphthong-ei** — **ei** is the *eye* vowel again, exactly as in *sein*. So *bleiben* is *BLY-ben*, never *blee-ben*. The two verbs of this chapter that break the rule both carry that vowel.

The word, taken apart — and its English cousins

bleiben is **be-** plus an old Germanic verb *liba-*, “to remain.” English lost the verb and kept its leavings — literally: what **remains** after everything else has gone is what English calls the **leftovers**, and *leave* in the sense of *what is left* belongs to the same family.

German still uses the verb every day; English kept only the residue of it, which is a fitting fate for a word meaning “to be left over.”

Your turn

Say these aloud:

- “bleiben” — *BLY-ben*, the *eye* vowel
- “ich bin geblieben”
- the odd pair — “ich bin geworden ... ich bin geblieben”

Twice through: “Ich bin geblieben.”

Before you move on

What does *bleiben* mean? (“**To stay.**”) Say “I stayed.” (**Ich bin geblieben.**) Does the motion rule predict its helper? (**No** — it has to be learned.) How is *ei* pronounced? (Like English **eye**.) Next: the rest of the verbs that have to be learned, including this chapter’s own verb.

18.6 ich bin gewesen — and the rest of the learned list

Bleiben was the first verb the rule failed to predict. Here is the whole of the rest of that list, and it is short.

Grammar Lens: the verbs you simply learn

Besides motion and change, a small fixed set of verbs takes *sein* and has to be **learned**.

verb	perfect	meaning
<i>sein</i>	<i>ich bin gewesen</i>	I have been
<i>bleiben</i>	<i>ich bin geblieben</i>	I stayed
<i>gelingen</i>	<i>es ist gelingen</i>	it succeeded
<i>geschehen</i>	<i>es ist geschehen</i>	it happened
<i>passieren</i>	<i>es ist passiert</i>	it happened
<i>begegnen</i>	<i>ich bin begegnet</i>	I met

Sein and *bleiben* head the list because they are the two that most clearly contradict the rule: one says a thing simply is, the other says it stays. The rest are events that arrive of their own accord —

succeeding, happening, running into somebody — and German treats an arrival as a change.

The word, taken apart — and its English cousins

Look closely at **gewesen**. Strip the *ge-* wrap and the *-en* ending and what is left is **wes-** — the third of the three roots inside this verb, the one that gave *war* and English *was*.

So *sein* reaches for that root twice: once for its past tense, once for its participle. The infinitive comes from one root, the present from two, the past and participle from a third. There is no part of this verb that belongs to all of it.

Your turn

Say these aloud:

- “ich bin gewesen; ich bin geblieben”
- “es ist passiert” — “it happened”
- “war ... gewesen” — the same root twice

Twice through: “ich bin gewesen.”

Before you move on

Name the two verbs at the head of the learned list. (***Sein*** and ***bleiben***.) Say “I have been.” (**Ich bin gewesen**.) Say “it happened.” (**Es ist passiert** — or *es ist geschehen*.) Which root is hiding inside *gewesen*? (***wes-**, the one behind *war*.) Next: the ending German does not put on any of these.

18.7 gegangen — the participle that never changes

French draws the same *have*-against-*be* line German does. Here is the place the two languages part company, and German comes out easier.

Grammar Lens: German agrees with nothing here

Inside the perfect, the German participle takes **no ending at all**. *Gegangen* is *gegangen* for every person, number and gender.

	French	German
he went	<i>il est allé</i>	<i>er ist gegangen</i>
she went	<i>elle est allée</i>	<i>sie ist gegangen</i>
they went	<i>ils sont allés</i>	<i>sie sind gegangen</i>

French makes the participle agree with its subject and spells the agreement out three different ways. German changes the helper — *ist*, *sind* — and leaves the participle exactly where it found it.

Old High German did inflect it here, at least some of the time. Modern German lost that, along with most of its other adjective-like endings in this position. So the simplicity is not a design; it is an erosion, and German happens to have come out ahead.

Why it's said this way

It would be easy to assume German copied this split from Latin, the way it borrowed so much else. It did not.

The *haben*-perfect and the *sein*-perfect are **native Germanic developments**. They grew up alongside the Romance ones rather than out of them: neighbouring languages drifting the same way over centuries of contact, the same areal spread that pushed the simple past out of everyday speech in French, German and Italian together.

Two things to carry forward, and they point in opposite directions:

- the **split** between the two helpers is shared with French;
- the **agreement** is not.

Your turn

Say these aloud:

- “er ist gegangen; sie ist gegangen; sie sind gegangen”
- the participle, unchanged, three times — “gegangen, gegangen, gegangen”

- the comparison — “elle est allée ... sie ist gegangen”

Twice through: “sie ist gegangen; sie sind gegangen.”

Before you move on

Does the German participle agree with its subject in the perfect? (**No** — never.) What changes instead? (**The helper** — *ist, sind*.) Does French agree? (**Yes**.) Did German take this split from Latin? (**No** — it grew in parallel.) Next: the one place a German participle does take an ending.

18.8 der angekommene Zug — where the ending comes back

The participle takes no ending in the perfect. That is a fact about the perfect, not about participles — and the difference matters.

Grammar Lens: in front of a noun, it inflects

A German participle standing **in front of a noun** is working as an adjective, and it takes the endings adjectives take there.

German	English
<i>ein geschriebener Brief</i>	a written letter
<i>der angekommene Zug</i>	the arrived train
<i>die eingeschlafene Katze</i>	the fallen-asleep cat

Each noun keeps its capital, and each participle now carries a small ending chosen by the article in front of it. That is the ordinary German adjective machine, applied to a participle. (*Katze*, “cat”, gets a lesson of its own later; here it is only carrying the ending.) So German did not lose participle endings everywhere. It lost them in exactly one construction: the perfect.

Sounds you’ll need

- **ge-prefix** — all three participles above still carry their **ge-** wrap, and it is still unstressed. In *angekommen* it has slid into

the middle of the word, behind *an-*, which is where German puts it when a prefix comes first.

Your turn

Say these aloud:

- “der angekommene Zug”
- “die eingeschlafene Katze”
- the contrast — “sie ist gegangen” (no ending) ... “die eingeschlafene Katze” (ending)
- “die müde Mutter” — an ordinary adjective doing the same thing

Before you move on

Where does a German participle still take an ending? (**In front of a noun**, as an adjective.) Where does it never take one? (**In the perfect**.) Say “the arrived train.” (**Der angekommene Zug**.) What is the participle behaving as, in that phrase? (**An adjective**.) Next: choosing between the two helpers, on the spot.

18.9 Practice — haben or sein?

No new words. The only skill left in this chapter is picking the right helper without stopping to think, and that is drill.

Grammar Lens: the whole family in one place

verb	perfect	why
<i>gehen</i>	<i>ich bin gegangen</i>	motion
<i>kommen</i>	<i>ich bin gekommen</i>	motion
<i>fahren</i>	<i>ich bin gefahren</i>	motion
<i>werden</i>	<i>ich bin geworden</i>	change of state
<i>bleiben</i>	<i>ich bin geblieben</i>	learned
<i>sein</i>	<i>ich bin gewesen</i>	learned
<i>lernen</i>	<i>ich habe gelernt</i>	ordinary activity
<i>machen</i>	<i>ich habe gemacht</i>	ordinary activity

Read the right-hand column and you can see how much of the work the motion rule does on its own: only two rows have to be memorised outright.

The exchange

German	English
<i>Wo bist du gewesen?</i>	Where have you been?
<i>Ich bin nach Berlin gefahren.</i>	I travelled to Berlin.
<i>Und Anna? Ist sie gekommen?</i>	And Anna? Did she come?
<i>Anna ist zu Hause geblieben.</i>	Anna stayed at home.
<i>Ich habe viel gelernt. Jetzt bin ich müde.</i>	I learned a lot. Now I am tired.

Note the third and fourth lines: *ist sie gekommen*, *Anna ist geblieben* — a feminine subject both times, and not one letter added to either participle.

Your turn

Say these aloud:

- the contrast pair — “ich habe gelernt ... ich bin gegangen”
- the family — “bin gekommen, bin gefahren, bin geworden, bin geblieben, bin gewesen”
- the French comparison — “elle est allée ... sie ist gegangen”, no ending at all
- the one place the ending returns — “der angekommene Zug”

- the whole exchange, both voices

Twice through: “ich habe gelernt ... ich bin gegangen.”

What you’ve built — where this volume pauses

You have gone from *guten Tag* to two working past tenses, and the method has not changed once: take the word apart, find the English cousin sleeping inside it, and let the family tree do the memorising for you.

The next volume picks the thread back up with describing what you see.

Before you move on

Which helper for *tanzen*, “to dance”? (**Haben** — an activity.)

Which for *fahren*? (**Sein** — motion.) Which two verbs on the *sein* list mean the opposite of change? (**Sein** and **bleiben**.) Say “she stayed.” (**Sie ist geblieben** — no ending on the participle.)

Chapter 19

Head and Hand

Modes: ⇄ voice (3) ⇄ Hands-free start: all 3 lessons.

By the end of this chapter: I can name the head and the hand in German, devolve the final d of Hand, and say where the Germanic and Latin families stop matching.

Say die Hand with its final d spoken as t, bring the d back in die Hände, run the Germanic body set Hand/Arm/Finger/Fuß/Herz, and name the gap: main, mano, mão — but Hand.

19.1 Der Kopf — “the head”

Learn the first body part with its article and its characteristic final sound.

You’ll want to know: der Kopf

der Kopf — the head

It is masculine and capitalised because every German noun begins with a capital letter.

Sounds you’ll need

At the end of **Kopf**, close for *p* and release directly into *f*. English has no identical native ending, so practise it slowly:

Ko-p-f → **Kopf**

Grammar Lens: Kopf + Schmerzen

A useful phrase is:

Ich habe Kopfschmerzen. — I have a headache.

German compounds simply place nouns together: **Kopf** (head) + **Schmerzen** (pains).

The word, taken apart — and its English cousins

Kopf originally meant a **cup or bowl**. It is related to English **cup**; both were early borrowings of Late Latin *cuppa*. A container word became slang for the skull and eventually took over the everyday job. German's older inherited head-word did not disappear completely. The next micro-lesson follows it into compounds and compares the same container metaphor in French.

Your turn

Say these aloud:

- “der Kopf” — release *p* into *f*
- “Ich habe Kopfschmerzen.”
- “Kopf — cup or bowl”

Twice through: “Der Kopf — masculine, capitalised.”

Before you move on

Say “the head.” (**Der Kopf**.) Give its gender. (**Masculine**.) Why the capital? (It is a **noun**.) What did *Kopf* first mean? (A **cup or bowl**.) Name the related English word. (**Cup**.) Next: find the inherited word *Haupt*.

19.2 Kopf / Haupt — two head-words

Kopf began as “cup.” German's inherited word for “head” is **Haupt**, a cousin of English *head* and Latin *caput*.

The word, taken apart — and its English cousins

language	inherited form
Latin	<i>caput</i>
German	Haupt
English	head

The initial $k \rightarrow h$ relationship reflects Grimm's law, the same systematic Germanic sound shift seen in Latin *pater* beside English *father*. The later consonants have their own history; use the initial pair as the clear signal.

Haupt survives in compounds and formal vocabulary:

- **Hauptstadt** — capital, literally “head city”;
- **Hauptbahnhof** — main station;
- **Hauptsache** — main thing.

Why it's said this way

language	everyday word	older picture
German	Kopf	<i>cuppa</i> , cup
French	<i>tête</i>	<i>testa</i> , pot

Both languages independently promoted a vessel-word to “head,” while keeping the older head-root in words for chiefs, capitals, or main things. The vocabulary sources are both Latin loans, but the **metaphor** was applied separately: heads look like bowls in many languages.

Your turn

Say these aloud:

- “Kopf — everyday cup-word”
- “Haupt — inherited head-word”
- “Hauptstadt, Hauptbahnhof”

Twice through: “Kopf took the job; Haupt stayed in compounds.”

Before you move on

Which word is everyday “head”? (**Kopf**.) Which inherited word survives in compounds? (**Haupt**.) Name two compounds. (**Hauptstadt, Hauptbahnhof**.) What parallel metaphor did French use? (**Tête**, originally a pot.) Next: the hand.

19.3 die Hand — “the hand”

After the tangle of *Kopf* and *Haupt*, here is the easiest word in the chapter — and a useful lesson about when languages **don’t** match.

You’ll want to know: die Hand

die Hand — the hand. **Feminine**, and spelled exactly like English.

Sounds you’ll need

One pronunciation note: the final **d** is said as a **t**. German devoices a consonant at the end of a word, so *Hand* **ends** like English *hunt* — but with the open *ah* of *Tag*, not *hunt*’s vowel. Add an ending and the *d* comes back: *die Hände* (“the hands”).

The word, taken apart — and its English cousins

Hand is Germanic **handuz*, and English inherited it directly. Same word, same meaning, two thousand years apart. German and English are close relatives, and body parts are where you feel it most:

German	English
Hand	hand
Arm	arm
Finger	finger
Fuß	foot
Herz	heart

Why it's said this way

Now the interesting part. Every Romance language builds “hand” on Latin *manus*:

French	<i>la main</i>
Italian	<i>la mano</i>
Portuguese	<i>a mão</i>
Spanish	<i>la mano</i>

And Germanic — German, English — has **handuz*, which is **not related to *manus* at all**. The two families simply have different words here.

That is worth noticing, because these connections keep turning up, and it can start to feel as though everything must connect. It doesn't. Indo-European languages share a great deal, and then diverge, and “hand” is one of the places where they diverged early and completely. The Latin word did reach German — but only as **borrowed vocabulary**: *Manuskript*, *Maniküre*, *manuell*. Learned imports, sitting beside the native word without displacing it.

Your turn

Say these aloud:

- “die Hand” — final **d** said as **t**
- the plural, and hear the *d* return — “die Hände”
- the Germanic set — “Hand, Arm, Finger, Fuß, Herz”
- the gap — “*main*, *mano*, *mão* ... but **Hand**”

Before you move on

Say “the hand.” (*Die Hand* — **feminine**.) How is the final **d** pronounced, and why? (As a **t** — German **devoices** final consonants; the *d* returns in *Hände*.) Is *Hand* related to French *main*? (**No** — Germanic **handuz* against Latin *manus*; the families differ here.) How did *manus* reach German anyway? (As **borrowed** learned words — *Manuskript*, *manuell*.) Next: the rest of the body.

Chapter 20

Yes and No

Modes: 🗣️ voice (2) 🗣️ Hands-free start: all 2 lessons.

By the end of this chapter: I can answer yes or no in German and take nein apart into ni + ein, the same 'not one' English froze into none.

*Say nein to rhyme with nine, split it into ni + ein and match it to English none, then run the PIE *ne chain — nōn, non, nein, nahīm.*

20.1 ja — yes

The easiest German word to say, and one English almost shares.

The word, taken apart — and its English cousins

ja = **yes**. Said *yah* — remember German **j** is pronounced like English **y**, never the English “j.”

It's an ancient **Germanic** word, and English kept the very same root in the one word that still clearly shows it:

- **yea** — the old, formal “yes” (*the yeas and the nays* in a vote) — this is *ja*'s direct cousin, same Proto-Germanic root.
- **aye** — the sailor's and parliament's “yes” (*Aye, aye, captain*) — *sounds* like a cousin, but its origin is actually **uncertain**; it may come from a different word entirely, so don't bank on it.

So German *ja* and English *yea* are the same little word, split between two cousin languages. (English's everyday *yes* is a compound of that

same *yea* with an old “be it so.”)

Grammar Lens: A German habit to file away

German also has a **third** answer-word, **doch**, for one special job: contradicting a **negative** — exactly like French *si*. If someone says something *isn't* so and you insist it *is*, you say **doch**, not *ja*:

Du kommst nicht? (“You’re not coming?”) — **Doch!**
 (“Yes I am!”)

You’ll drill *doch* on its own later; for now, keep *ja* for a plain yes and know *doch* is waiting for the contradictions.

Your turn

Say these aloud:

- “ja” — *yah*, the j like English y
- the English cousin — “yea... ja” (and maybe *aye*)
- the contradiction preview — “Du kommst nicht? — Doch!”

Before you move on

How do you say yes in German? (**ja**, *yah*.) How is the **j** pronounced? (Like English **y**.) Which English word is *ja*’s firm direct cousin? (**yea** — *aye* only looks like one; its origin is uncertain.) What German word answers *yes* specifically to contradict a **negative**? (**doch**.)

20.2 nein — no

German’s “no” is a tiny sentence with a number hidden inside it.

The word, taken apart — and its English cousins

nein = **no**. Said to rhyme with English *nine* (the **ei** in German is always *eye*).

Take it apart and it's two words fused: **ni** + **ein** — literally “**not one**.” English did the *exact same trick*: **ne** + **one** → **none**. So German *nein* and English *none* are the same idea — “not a single one” — hardened into a bare “no.”

Why it's said this way

That **n-** at the front is not a coincidence. A single ancient sound — linguists write it **PIE *ne** — is the negator behind an astonishing sweep of languages you're learning:

from PIE **ne*

Latin	<i>nōn</i> → Spanish no , French non
German	nein (<i>ni</i> -ein)
Hindi	nahīm (from <i>na</i>)
English	no , not , none

Learn *nein* and you've really met the same “n-of-no” that will greet you again in Hindi, and that also sits inside Spanish and French. One negative, half the world.

Your turn

Say these aloud:

- “nein” — rhymes with *nine*
- taken apart — “ni + ein = not one”, like English *none*
- the family — “nōn... non... nein... nahīm” — all the PIE *ne*

Before you move on

How do you say no in German? (**nein**, rhymes with *nine*.) What two words is it fused from, and what do they mean? (**ni** + **ein** — “not one.”) Which English word is built the same way? (**none** = *ne* + *one*.) What ancient sound links German *nein*, Latin *nōn* and Hindi *nahīm*? (**PIE *ne**, the negator.)

Chapter 21

Please

Modes: 🗣️ voice (1) 🖱️ Hands-free start: all 1 lesson.

***By the end of this chapter:** I can ask politely for something in German by putting **bitte** after the thing I want — **Wasser, bitte**.*

*Assemble a complete polite request out of two words already learned — **Wasser, bitte** — and hear the request still living inside **bitte** via **bitten**, English **bid** and **bead**. The chapter's only lesson, so the payoff covers everything it introduces.*

21.1 **bitte** — turn a known word into a polite request

You already use **bitte** after **danke** to mean “you’re welcome.” Now give that same small word its other everyday job: **please**.

You’ll want to know: A complete small request

Wasser, bitte. — Water, please.

Nothing here is new except the job **bitte** is doing. You learned **Wasser** with the food. Put **bitte** after the thing you want and the two known words become a complete, polite small request. The comma marks the little pause you will naturally hear before **bitte**.

The word, taken apart — and its English cousins

Bitte is the request form of **bitten**, “to ask, request, pray.” Its English cousins are **bid**—as in “I bid you welcome”—and **bead**, whose oldest meaning was a prayer. A prayer bead was first the object used to count those requests.

So when you add **bitte**, the word itself is already doing the asking.

Your turn

Say these aloud:

- “Wasser.” — water
- “Wasser, bitte.” — water, please
- the root family — “bitten, bitte, bid, bead”

Before you move on

Ask politely for water. (**Wasser, bitte.**) What older lesson supplied both words? (**Bitte** came from the courtesy loop; **Wasser** came from the food chapter.) Which verb is **bitte** built from? (**Bitten**, “to ask or request.”) Name its two English cousins. (**Bid** and **bead.**)

Chapter 22

Sorry

Modes: 🗣️ voice (1) 🖱️ Hands-free start: all 1 lesson.

By the end of this chapter: I can apologise or excuse myself in German with *Entschuldigung*, and reach for *es tut mir leid* when I mean it more.

Say Schuld, then Entschuldigung as the 'un-guiling' built on it, and switch to es tut mir leid for real regret rather than a bump in the hallway. The chapter's only lesson, so the payoff covers everything it introduces.

22.1 Entschuldigung — “sorry” / “excuse me”

You already know **bitte** does triple duty for “please,” “you’re welcome,” and “here you go.” German’s word for **sorry** is just as hard-working: **Entschuldigung** covers both “**excuse me**” and “**I’m sorry**.”

The word, taken apart — and its English cousins

- **ent-** = a “removal / undoing” prefix — the same shape as in **entdecken** (“un-cover” → discover) or **entfernen** (“un-distance” → remove).
- **Schuld** = “**guilt, fault, blame**” (also, separately, “debt” — a *Schuld* can be money owed or wrong done).
- **-igung** = a noun-forming suffix, roughly “-ing/-ation.”

So **Entschuldigung** is literally “**an un-guiling**” — the act of

removing blame. Saying it hands the guilt back: *I release you from any fault* (when getting someone's attention or brushing past) or *I ask you to release me from mine* (when apologizing).

Schuld has a striking cousin: it traces to the same ancient Germanic root as English **shall** and **should** — a verb that originally meant “**to owe.**” *Schuld* (what is owed, guilt) and *shall* (what one is obliged to do) are, at root, the same idea of an obligation outstanding.

Why it's said this way

For **deeper regret** — real sorrow, not a bump in the hallway — German often reaches for **es tut mir leid**, literally “**it does to-me sorrow**”:

- **es** = “it,” **tut** = “does” (from **tun**, “to do”), **mir** = “to me,” **Leid** = “sorrow, suffering” (a cousin of English **loath**, both from a root meaning “hateful, painful”).

Use **Entschuldigung** for the everyday sorry/excuse-me (stepping on a foot, interrupting), and **es tut mir leid** when you mean it more — condolences, a real regret. The two overlap; native speakers move between them by feel.

Your turn

Say these aloud:

- “Schuld” — guilt/fault — then “Entschuldigung,” sorry / excuse me
- the deeper phrase — “es tut mir leid,” it pains me / I’m so sorry

Before you move on

What does **Entschuldigung** literally mean, piece by piece? (“**Un-guiling**” — *ent-* “away” + *Schuld* “guilt/fault.”) What English word shares Schuld’s ancient root? (**Shall/should** — both from a root meaning “to owe.”) What’s the deeper phrase for real regret? (**Es tut mir leid**, “it does to me sorrow.”)

Chapter 23

Weather

Modes: 🗣️ voice (1) 🖱️ Hands-free start: all 1 lesson.

By the end of this chapter: I can talk about the weather in German — das Wetter, es ist heiß, es ist kalt, es regnet.

Say das Wetter as English weather's own cousin, build hot and cold with sein rather than a Romance 'make', and say es regnet on the same root as English rain. The chapter's only lesson, so the payoff covers everything it introduces.

23.1 das Wetter, es regnet — German's own native words, English's own cousins

Every Romance language you've met so far shares the exact same Latin word for “weather” (*tempus*). German breaks completely from that family — with a word that's actually a much closer cousin of English.

The two words: das Wetter and weather

das Wetter = “**weather**” — from Proto-Germanic *wedraq* — the **exact same word** as English **weather** itself (both descend from the same Germanic ancestor, not one borrowed from the other). Unlike Spanish's *tiempo*, French's *temps*, or Latin's own *tempus*-family, German's weather word has **no connection to Latin at all** — it's a native Germanic inheritance, cousin to English rather than to Romance.

Grammar Lens: Es ist heiß / Es ist kalt

Es ist heiß. — “It’s hot.” — literally “it **is** hot.” **Es ist kalt.** — “It’s cold.” — literally “it **is** cold.”

German uses **sein** (“to be”) here — matching the same “**be**” pattern you already met in German’s own AGE lesson (*ich bin zwanzig*), not the Romance “make” periphrasis (*hacer/faire*).

The word, taken apart — and its English cousins

Es regnet. — “It’s raining.” — from **regnen** ← Proto-Germanic **regnōnq** — the **same root** as English **rain**. Just like *Wetter*/ “weather,” this is a genuine Germanic cousin-pair, not a shared Latin borrowing the way Spanish’s *llueve* and French’s *pleut* are.

Your turn

Say these aloud:

- “Wetter” — weather, the same word as English “weather”
- “Es ist heiß. Es ist kalt.” — it’s hot/cold
- “Es regnet” — it’s raining, same root as English “rain”

Before you move on

Does **Wetter** come from Latin, like the Romance languages’ weather words? (**No** — it’s native Germanic, the same word as English “weather.”) What verb does German use for “it’s hot/cold” — *sein* (“be”) or a *hacer*-style “make”? (**Sein**, “to be” — matching German’s own AGE pattern.) What English word is **regnet** related to? (**Rain** — same Proto-Germanic root, *regnōnq*.)

Chapter 24

Dog and Cat

Modes: 🗣️ voice (1) 🗣️ Hands-free start: all 1 lesson.

By the end of this chapter: I can name a dog and a cat in German and say which of the two words German inherited and which one it borrowed.

Say Hund beside English hound and the unexplained dog that displaced it, then say Katze and admit it is the borrowed Late Latin cattus — widespread, but not universal: Romanian pisică and Serbian mačka went their own way. The chapter's only lesson, so the payoff covers everything it introduces.

24.1 Hund, Katze — one native word, one surprising loan

Here's a real surprise to end this comparison on: German's word for “dog” is native and expected — but its word for “cat” secretly isn't native at all.

The word, taken apart — and its English cousins

Hund (“**dog**”) is native Germanic, from **Proto-Indo-European** **kwon-* — and it has a direct cousin sitting inside English itself: **hound**. Old English **hund** was the ordinary, everyday word for “dog” for centuries — until, for reasons nobody fully understands, **dog** (Old English *docga*) pushed it out by the 16th century, leaving *hound* to narrow down to just hunting dogs. English's *dog* is, honestly, its **own** unexplained mystery word, with no confirmed cognates in any other

language — the exact same *shape* of story as Spanish’s *perro* displacing *can*, just in a completely different language family.

The word, taken apart — and its English cousins

Here’s the twist: **Katze** (“cat”) looks like it should be native Germanic too, sitting right next to native *Hund* — but it isn’t. **Katze** descends from Proto-Germanic ***kattuz**, which is itself a borrowing of the **same Late Latin cattus** you already met with French’s *chat* and Spanish’s *gato* — most likely ultimately **Afro-Asiatic**, traveling out of Egypt along Roman trade routes. Every Germanic language shows this **same** borrowing (Dutch *kat*, Swedish *katt*, Icelandic *köttur*) — so unlike “dog” words, which go their own separate ways in nearly every language, “cat” words are remarkably **widespread** across both Germanic and Romance, because the word traveled **with the animal itself**. Be honest that this isn’t a universal rule, though: **Romanian** (*pisică*) and much of **South Slavic** (Serbian/Croatian *mačka*) built their own onomatopoeic cat-words instead, imitating the sound of a cat’s call rather than inheriting *cattus* — so the spread is wide, but not without real exceptions.

Your turn

Say these aloud:

- “Hund” — dog, native Germanic, cousin of English “hound”
- the parallel — English replaced “hound” with the still-mysterious “dog,” the same shape as Spanish’s *perro*/*can*
- “Katze” — cat, surprisingly a Latin loanword, not native at all

Before you move on

Is **Hund** native Germanic, and what’s its English cousin? (**Yes** — cousin of English **hound**.) What word did English replace *hound* with, and is that word’s origin known? (**Dog** — genuinely **unexplained**, no confirmed cognates anywhere.) Is **Katze** native Germanic? (**No** — surprisingly, it’s the same borrowed Late Latin *cattus* behind French’s *chat* and Spanish’s *gato*.)

Chapter 25

Green and Yellow

Modes: ⇄ voice (1) ⇄ Hands-free start: all 1 lesson.

By the end of this chapter: I can name green and yellow in German, and say why grün is English green’s own cousin while gelb’s link to French jaune is only probable.

Say grün as the direct cousin of English green from a root unrelated to Latin viridis, say gelb, and state the gelb / jaune cousinhood as probable rather than airtight. The chapter’s only lesson, so the payoff covers everything it introduces.

25.1 grün, gelb — English’s own cousin, and a secret cousin of French

German’s green word is a direct cousin of English’s own word. Its yellow word has a cousin too — but a much more surprising one, sitting inside French.

The word, taken apart — and its English cousins

grün (“green”) is native Germanic, from Proto-Germanic **grōniz*, ultimately from **Proto-Indo-European** **ǵʰreh₁-*, “to grow, to become green” — the **exact same root** as English’s own **green**. Be careful, though: this is a **completely different** root from Latin’s **viridis** (source of Spanish’s *verde*, French’s *vert*), which traces to its own, separate “to grow/flourish” root, **weis-*. Two unrelated language families each independently built a “green” word out of a verb meaning “to grow” — a real coincidence of logic, not a shared word.

The word, taken apart — and its English cousins

gelb (“yellow”) is native too, from Proto-Germanic **gelwaz* — and the same word as English’s **yellow**. Trace it back far enough, to **Proto-Indo-European** **ghel-* (“to shine,” with derivatives covering yellow, green, and gold), and it is usually said to land on the **same ancient root** behind Latin’s **galbus/galbinus** — the source of **French’s jaune**. Honesty check, though: that particular link is **less secure** than it looks — some modern Latin scholarship treats *galbus*’s origin as genuinely unknown rather than confirming the **ghel-* connection. So *gelb* and *jaune* are **probably** PIE-level cousins, despite belonging to completely different language families and reaching German and French by entirely separate paths — just don’t treat the link as airtight.

Your turn

Say these aloud:

- “grün” — green, direct cousin of English’s own “green”
- “gelb” — yellow, probable hidden cousin of French’s *jaune*
- the contrast — grün’s root is unrelated to Latin’s *viridis*, but *gelb*’s root is **PROBABLY** shared with French’s *jaune*

Before you move on

Is **grün** related to Latin’s *viridis*? (**No** — a completely different root, though both independently mean “grow” → “green”; *grün* IS a direct cousin of English’s own “green.”) What French word is **gelb**’s probable PIE cousin, and how solid is that link? (**Jaune** — both usually traced to PIE **ghel-*, “to shine,” though modern Latin scholarship treats *galbus*’s origin as genuinely unknown, so the connection is probable, not certain.)

Chapter 26

Verbs of the Mind

Modes: 🗣️ voice (4) 🗣️ Hands-free start: all 4 lessons.

By the end of this chapter: I can say I think, I understand, I read and I write in German, break a strong verb's vowel in the du and er forms, and say which of the four German borrowed rather than inherited.

The chapter closes on schreiben, the one loan among four inherited verbs: the reader produces all four ich forms and all four er forms, names liest as the only vowel-breaker, and takes Manuskript apart into the Latin hand German never inherited plus the Latin verb it did. It reaches back past its own chapter to reassess Chapter 17's Hand, the Hand/manus gap, and Grimm's law.

26.1 denken — the verb that was inside *danke* all along

You learned early on that **danke** is built on a verb meaning “to think.” Here is that verb, with its own forms at last.

Sounds you'll need

- **vowel-e-german** — a short, open *e*.
- **ng-cluster** — *n* before *k* is the *ng* of *sing*: **denken** = *DENG-ken*.

You'll want to know: denken

denken means “**to think**,” with the same audible endings you drilled on *wohnen*, *machen* and *lernen*:

- **ich denke** — I think · **wir denken** — we think
- **du denkst** — you think · **ihr denkt** — you all think
- **er denkt** — he thinks · **sie denken** — they think

Ich denke, also bin ich. — “I think, therefore I am.”

It also carries the weather straight into a new sentence:

Ich denke, es ist kalt. — “I think it is cold.”

The word, taken apart — and its English cousins

denken is Proto-Germanic **þankijanaþ*. English **think** is that same inherited word — a loan in neither direction.

One consonant separates them, and you have been taught how to read it. With **Haupt** beside *head* you met **Grimm’s law**, which turned Proto-Indo-European **k* into Germanic *h*. The same law turned PIE **t* into Germanic **þ*, the *th* sound. English kept it and spells it **th**: *think*. German later softened it to **d**.

Germanic **þankō* meant both “a thought” and “gratitude” — hence German **Dank** and **Gedanke**, and English **thank** beside **think**. To thank was to hold someone in thought. German also kept a sibling verb, **dünken**, “to seem”; English had that one too and let it collapse into *think*.

Grammar Lens: also does not mean “also”

In *Ich denke, also bin ich*, the word **also** means “**therefore**.” English *also* is *eall swā*, “all so,” meaning *likewise*; German *also* is *al + so*, meaning *thus*. Same bricks, different building. A German saying **also** is drawing a conclusion, not adding to a list.

Your turn

Say these aloud:

- “ich denke, du denkst, er denkt”

- “wir denken, ihr denkt, sie denken”
- “Ich denke, also bin ich.”
- “Ich denke, es ist kalt. Das Wetter ist gut.”
- the family — “denken, danke, Dank, Gedanke”
- the shift — PIE *t*, Germanic *th*, German *d*: think, denken

Before you move on

Which chapter-3 word is built on **denken**? (**Danke**.) Is English *think* a borrowing? (**No** — both inherited **þankijanq.*) Which law turned PIE **t* into the Germanic *th* German made a *d*? (**Grimm’s law**, as in *Haupt* and *head*.) What does German **also** mean? (**Therefore**.)

26.2 verstehen — standing around a thing until you see it

You can say **ich denke**. Thinking happens in the **Kopf**; this is the verb for when it lands — and English built its own word from the same picture, separately.

Sounds you’ll need

- **v-as-f** — German **v** is said *f*, so *ver-* is *fair-*.
- **h-silent-lengthening** — the **h** is silent; it marks the vowel before it as long. **verstehen** = *fair-SHTAY-en*.

You’ll want to know: verstehen

verstehen means “to understand,” with the ordinary endings:

- **ich verstehe · wir verstehen**
- **du verstehst · ihr versteht**
- **er versteht · sie verstehen**

Ich verstehe. — said on its own, constantly. **Ich verstehe Deutsch.** — “I understand German.”

The word, taken apart — and its English cousins

Break it in two: **ver-** plus **stehen**, “to stand.” *Stehen* is English **stand**, the same inherited word, Proto-Germanic **standanq*. The prefix **ver-** is old and worn, and here it carries its ancient sense “around, about.” So *verstehen* is literally “**to stand around**” a thing. Now English. **Understand** is *under* + *stand* — and that *under* is not “underneath.” The usual explanation is that Old English *under* also carried the sense “among, between,” a cousin of Latin *inter*; so *understand* is “to stand **among**” a thing. That reading is standard but not certain, and no honest account will claim otherwise.

Either way the important fact holds: **each language welded a prefix onto its own inherited verb “to stand” and got a word for comprehension.** Neither borrowed the compound. The green-and-yellow lesson showed the same move with **grün**: Germanic and Latin each built “green” from a verb for “grow,” independently. This is that coincidence one family closer in.

The verb underneath is one of the family’s biggest roots, PIE **steh₂-*: German **der Verstand** (“reason”), English **stand, stead, stall**, and — from Latin’s *stāre* — **state, station, stable, constant**.

Your turn

Say these aloud:

- “ich verstehe, du verstehst, er versteht”
- “Ich verstehe Deutsch.”
- both verbs — “Ich denke. Ich verstehe.”
- the pieces — “ver- + stehen” beside “under + stand”
- the parallel — like *grün* beside *viridis*, built, not shared
- where it happens — “der Kopf” — and what stands in it, “der Verstand”

Before you move on

What are the two pieces of **verstehen**? (**Ver-** + **stehen**.) Which English verb is *stehen*? (**Stand**.) Did English borrow *understand*

from German? (**No** — each built its own compound.) How solid is the “under = among” account? (**Standard, but not certain.**) Say “I think” and “I understand.” (*Ich denke. Ich verstehe.*)

26.3 lesen — gathering, and the first verb that changes its vowel

Every German verb so far has kept its vowel in every form. This one does not — and its older meaning is **gathering**.

Sounds you'll need

- long-e — a long *e*, English *ay* without the glide.
- s-voiced — a single *s* between vowels buzzes like *z*: *LAY-zen*.

You'll want to know: lesen

lesen means “to read.”

- **ich lese** — I read · **wir lesen** — we read
- **du liest** — you read · **ihr lest** — you all read
- **er liest** — he reads · **sie lesen** — they read

Ich lese Deutsch. — “I read German.”

Grammar Lens: the vowel that breaks in the middle

Four forms keep the *e* of *lesen*. Two swap it for a long *ie*: *du liest*, *er liest*.

That is the mark of a **strong verb**: the vowel changes inside the word, in exactly two present-tense forms — **du** and **er/sie/es**. Nothing else moves; the endings stay the familiar *-e* / *-st* / *-t*. It is a rule about a whole class of verbs, not about *lesen*.

The word, taken apart — and its English cousins

lesen is Proto-Germanic **lesaną*, “to gather.” That sense still lives in **die Weinlese**, the grape harvest — the *wine-gathering*, built on the

Wein you already have. Reading came second: you pick the letters up, one after another.

Now the trap. Latin **legere** also meant “to gather,” also came to mean “to read,” and stands behind **legible**, **lecture**, **lesson** and **collect**. It looks like one shared word. It probably is **not**: the sounds do not correspond as they should, and the standard account ties *lesen* to a separate root, whose clearest cousin is Lithuanian *lèsti*, “to peck up grain.” Treat it as you treated **grün** beside *viridis*.

English **read** is a third story: Old English *rædan*, “to advise,” which is German **raten** and **das Rätsel** (“riddle”). *Lesen* and *read* are no relation.

Your turn

Say these aloud:

- “ich lese, du liest, er liest” — hear the vowel break
- “wir lesen, ihr lest, sie lesen” — and back
- “Ich lese Deutsch. Ich verstehe Deutsch.”
- the old meaning — “die Weinlese”
- the three so far — “denken, verstehen, lesen”
- why *lesen* is not *legere* — the reason *grün* is not *viridis*

Before you move on

Which two forms of a strong verb break their vowel, and what are they here? (**Du** and **er/sie/es** — **du liest, er liest**.) What did *lesen* mean first? (**To gather** — *die Weinlese*.) Is it Latin *legere*? (**Probably not** — the sounds do not correspond.) And English *read*? (**No relation** — it meant “to advise,” and is German *raten*.)

26.4 schreiben — the one borrowed verb

Three verbs in, all three English’s own blood relatives. The fourth breaks the run: **German borrowed it; English did not.**

Sounds you'll need

- sch-sh — **sch** is one sound, English *sh*.
- diphthong-ei — **ei** is said *eye*: **schreiben** = *SHRY-ben*.

You'll want to know: schreiben

schreiben means “to write.”

- **ich schreibe** — I write · **wir schreiben** — we write
- **du schreibst** — you write · **ihr schreibt** — you all write
- **er schreibt** — he writes · **sie schreiben** — they write

Ich schreibe Deutsch. · **Die Hand schreibt.**

Grammar Lens: strong, but not here

Lesen taught you to watch **du** and **er**. Here: *du schreibst*, *er schreibt* — **the vowel does not move**. *Schreiben* is strong (its past is *schrieb*), but its present is smooth. So the rule is exact: a strong verb may break its vowel there. Hold the pair: *du liest*, but *du schreibst*.

The word, taken apart — and its English cousins

schreiben is Latin *scribere*, and before that “to scratch.” German took it in with the writing itself, and early: the loan passed through German sound changes — *sc-* became *sch-* — and joined the native strong verbs, its past becoming *schrieb*. A late loan would have done neither.

English refused it. **Write** is Old English *writan*, also “to scratch,” because runes were cut; German **reißen** and **ritzen** are its relatives. Two languages, two writing-words, both meaning *scratch*. Latin’s verb reached English anyway: **scribe**, **script**, **describe**, **transcript**. And one closes a circle back to **die Hand**. German **Hand** has **no Latin cousin** — Latin says *manus* — yet *manus* reached German as a loan: **Manuskript**. *Manu-* is *manus*, the hand; *-skript* is *scriptum*, this verb. A **Manuskript** is written *by hand*: the Latin hand-word German never inherited, bolted to the Latin writing-verb it did.

Your turn

Say these aloud:

- “Die Hand schreibt. Ich schreibe Deutsch.”
- the four “I” forms — “ich denke, ich verstehe, ich lese, ich schreibe”
- the four “he” forms — “er denkt, er versteht, er liest, er schreibt” — only *liest* broke
- three inherited, one borrowed — “denken/think, verstehen/stand, lesen/gather”, then “schreiben/scribere”
- denken’s *d* — PIE *t*, Germanic *th*: Grimm’s law
- “Ich denke, also bin ich.” — and what *also* does
- *Manuskript* — *manus* plus *scriptum*

Before you move on

Say all four “I” forms. (*Ich denke, ich verstehe, ich lese, ich schreibe*.) Which is the loan? (*Schreiben*, from *scribere*, “to scratch” — as English *write* also meant.) Which “he” form breaks its vowel? (Only *liest*.) Which half of *Manuskript* did German never inherit? (*Manus*, its own **Hand**.) And German *also*? (**Therefore**.)

Chapter 27

Taking, Asking, Helping, Liking

Modes: 🗣️ voice (4) 🗣️ Hands-free start: all 4 lessons.

By the end of this chapter: I can say I take, I ask, I help and I like in German, sort all eight verbs of these two chapters into the three present-tense patterns, and use gern to say I like doing something.

The chapter closes on mögen, lieben and gern: the reader produces all eight ich forms of Chapters 24 and 25, sorts them into vowel-stays, vowel-breaks and the old third pattern, hangs gern on four verbs already learned, and runs the nine-word cousin roll-call. It reaches back to every atom of Chapter 24 and to Chapters 21 and 22 — Ich mag das Wetter, Ich mag die Katze, Der Hund mag Wasser.

27.1 nehmen — the verb English threw away

Four verbs about doing rather than thinking. **Schreiben** was a Latin word German took and English refused; this one is the reverse — a Germanic word English threw away and German kept.

Sounds you'll need

- long-e — a long *e*: **nehmen** = *NAY-men*.
- h-silent-lengthening — the **h** is silent, marking the long vowel.

You'll want to know: nehmen

nehmen means “to take.” It is what a **Hand** does.

- **ich nehme** — I take · **wir nehmen** — we take
- **du nimmst** — you take · **ihr nehmt** — you all take
- **er nimmt** — he takes · **sie nehmen** — they take

Grammar Lens: the rule again, and harder

You know where to look: **du** and **er**. Long *e* becomes short **i** — *du nimmst*, *er nimmt* — while *wir*, *ihr* and *sie* keep the *e*.

This goes further than *lesen* did: once the vowel shortens the silent *h* has no job, so it drops and the **m** doubles: *nehmen* but *nimmt*. Say them back to back — *NAY-men*, *NIMT*.

Three shapes now: *du liest* breaks its vowel; *du nimmst* breaks it and respells the word; *du schreibst* does not break at all.

The word, taken apart — and its English cousins

nehmen is Proto-Germanic **nemaną*, “to take.” English had it — Old English *niman* — and then **lost it**, because Norse settlers brought *taka* and English took **take** instead.

A lost word leaves fossils, and English carries two. **Numb** is the old past participle of *nim*: a hand *taken* by the cold. **Nimble** is “quick to take hold.”

Beyond Germanic the root **nem-* meant “to assign, to allot,” and Greek’s version is unexpectedly familiar: *némein*, “to distribute,” gives **nomad**, **economy** and **nemesis**.

Why it’s said this way

German **bekommen** means “to receive, to get” — not “to become.” Both are built from the same prefix and the same verb of motion, and then the meanings walked off in opposite directions. A German saying **Ich bekomme...** in a café is being served, not transformed.

Recognise *bekommen*; **say** *nehmen*.

Your turn

Say these aloud:

- “ich nehme, du nimmst, er nimmt” — *NAY-me, NIMST, NIMT*
- “wir nehmen, ihr nehmt, sie nehmen” — the long *e* is back
- “Die Hand nimmt. Die Hand schreibt.”
- the three shapes — “du liest, du nimmst, du schreibst”
- the fossils — “nehmen, numb, nimble”
- borrowed against lost — “schreiben came in from Latin; niman went out”
- the trap — “bekommen is *receive*”

Before you move on

Give the *du* and *er* forms. (***Du nimmst, er nimmt*** — the *h* drops, the *m* doubles.) Which verb replaced the English cousin of *nehmen*? (**Take**, from Norse.) Name the two fossils it left. (**Numb** and **nimble**.) What does **bekommen** mean? (**To receive**.) And say “the hand takes.” (***Die Hand nimmt.***)

27.2 fragen — asking, and the three answers German gives back

After two vowel-breaking verbs, a rest: this one keeps its vowel everywhere. And you already own its answers — all **three** of them.

Sounds you’ll need

- vowel-a-german — a pure open *ah*: **fragen** = *FRAH-gen*.
- r-uvular-german — the soft guttural *r* you first met in *lernen*.

You’ll want to know: fragen

fragen means “to ask.”

- **ich frage · wir fragen**
- **du fragst · ihr fragt**

- **er fragt** · **sie fragen**

The noun sits beside it: **die Frage**, “the question.”

Grammar Lens: the vowel that stays

Check the two forms that break in a strong verb. *Du fragst. Er fragt.* The *a* has not moved.

fragen is a **weak** verb — the ordinary kind, built like *lernen* and *machen*: endings only, stem untouched. That matters, because after *lesen* and *nehmen* it is easy to start breaking vowels everywhere. Most German verbs are weak; the strong ones are a closed club, learned one at a time. Hold the pair: **du nimmst**, but **du fragst**.

Why it's said this way

An asked question wants an answer, and you have the whole German set already. English has two. German has **three**:

- **ja** — yes.
- **nein** — no.
- **doch** — the one English has no word for: *yes, against what you just said*. It exists to contradict a negative.

The word, taken apart — and its English cousins

fragen goes back to Proto-Indo-European ***prek-**, “to ask.” Germanic turned that opening *p* into an *f* — the Grimm’s-law step that puts *father* beside Latin *pater*.

English once had the cousin, Old English *frignan*, and dropped it, just as it dropped the cousin of *nehmen*. The word it uses instead, **ask**, is a different Germanic word and no relation.

So English gets the root back only the long way round. Latin *precārī*, “to beg, to pray,” is the same verb, and gives **pray**, **prayer** and **precarious** — literally “held only by asking for it.”

One caution: Latin *rogāre*, “to ask,” behind *interrogate*, looks like a candidate and is **not** related — it belongs with *rēx* and *right*, a root about straightening and ruling.

Your turn

Say these aloud:

- “ich frage, du fragst, er fragt” — the *a* never moves
- “die Frage” — the question
- the contrast — “du liest, du nimmst”, then “du fragst”
- the three answers — “ja, nein, doch”
- the Latin cousins — “pray, prayer, precarious”
- the two verbs English dropped — “nehmen, fragen”

Before you move on

Is **fragen** strong or weak, and how do you know? (**Weak** — *du fragst*, the vowel never breaks.) Name German’s three answers. (**Ja**, **nein**, **doch** — the last contradicts a negative.) Is English *ask* a relative? (**No**.) Which English words carry the root instead? (**Pray**, **precarious**, through Latin *precārī*.) Say “I ask” and “I take.” (*Ich frage*. *Ich nehme*.)

27.3 helfen — one word, one sound law, two languages

Almost nothing sits between the two words: **helfen** *is* **help**. The lesson is the single sound that separates them — and it is not the law you already know.

Sounds you’ll need

- **h-pronounced** — a real, breathed *h*, unlike the silent one in *nehmen*.
- **f-final** — a clean *f*: **helfen** = *HEL-fen*.

You'll want to know: helfen

helfen means “to help,” and it is strong, so you know where to look:

- **ich helfe** · **wir helfen**
- **du hilfst** · **ihr helft**
- **er hilft** · **sie helfen**

The *e* becomes **i** in *du* and *er*, exactly as in *nehmen* — the third verb to do it, so by now you can predict it.

One honest limit: when German names the person helped, that person's word takes a noun form this book has not taught. Keep to **Ich helfe** on its own.

Why it's said this way

The noun is **die Hilfe**, “help” — the same *e* to *i* change, frozen. And **bitte** gave you the shape for asking politely: name the thing, then say **bitte**.

Hilfe, bitte. — “Help, please.”

A whole request, from one new noun and one old word.

The word, taken apart — and its English cousins

helfen is Proto-Germanic **helpaną*, and English **help** is the same inherited word.

The only difference is **p** against **f**, from a different law than the one behind **Haupt**. That was **Grimm's law**, the *first* shift, PIE sounds into Germanic ones — seen again in *fragen's* *p* becoming *f*. This is the **second**, High German shift, much later, and the event that split German from English. After a vowel, Germanic **p** became German **f**: *helpan* → **helfen**; *ship* → **Schiff**; *open* → **offen**; *sharp* → **scharf**; *deep* → **tief**.

Outside Germanic, be honest: *helfen* has **no secure cousins** — a proposed link to Lithuanian *šelpiti* is disputed.

English keeps a fossil, though. *Helfen* is still strong — *helfen*, *half*, *geholfen* — and *help* was too: its old **holp** and **holpen** survive in old Bibles and dialect. English let the shape go within recorded memory.

Your turn

Say these aloud:

- “ich helfe, du hilfst, er hilft” — the *e* breaks to *i*
- “Hilfe, bitte.”
- the strong pair — “du nimmst, du hilfst” — then the weak “du fragst”
- the second shift five times — “helfen/help, Schiff/ship, offen/open, scharf/sharp, tief/deep”
- which law was which — Grimm’s law gave *Haupt*; the second shift gave *helfen*

Before you move on

Give the *du* and *er* forms. (***Du hilfst, er hilft.***) Which shift separates *helfen* from *help*, and is it the one behind *Haupt* and *head*? (The **second**, High German shift — **no**, *Haupt* was **Grimm’s law**.) Name two more pairs from it. (**Schiff/ship, offen/open, scharf/sharp.**) Cousins outside Germanic? (**None secure.**) Ask for help politely. (***Hilfe, bitte.***)

27.4 mögen, lieben, gern — German’s three ways of liking

English says “I like.” German has **three** ways, and the commonest is not a verb.

You’ll want to know: mögen and lieben

mögen (“to like”, *MER-gen* — **ö** is *ay* with rounded lips) is a **third** pattern, an old verb whose *ich* and *er* forms take no ending:

- **ich mag · wir mögen**
- **du magst · ihr mögt**
- **er mag · sie mögen**

lieben (“to love”, *LEE-ben* — **ie** is a long *ee*) is weak: *ich liebe, du liebst, er liebt*.

Ich mag die Katze. · Der Hund mag Wasser. · Ich mag das Wetter. · Ich liebe Deutsch.

A masculine **der** noun changes its article after *mögen* — untaught here, so these use **die** and **das** words.

Grammar Lens: gern hangs on any verb

gern is an adverb, “gladly,” dropped in after a verb:

Ich lese gern. — “I read gladly”: **I like reading.** **Ich schreibe gern. · Ich helfe gern.**

English must rebuild the sentence, with *like* plus a verb in *-ing*; German changes nothing. So: **mögen** for a thing, **gern** for an activity, **lieben** for love.

The word, taken apart — and its English cousins

All three are English words you already own.

mögen is **maganq*, “to have power” — English **may**. The meaning slid from being able, to being inclined, to liking; the power sense survives in **might** and **die Macht**.

lieben is **leubaz*, “dear” — English **love** exactly, with **lief** and **believe** (to *hold dear*). **gern** is **gernaz*, “eager” — English **yearn**. So *Ich lese gern* is “I read yearningly.”

What you’ve built across these two chapters

- **vowel stays:** *denken, verstehen, fragen, schreiben* (strong only in its past).
- **vowel breaks:** *du liest, du nimmst, du hilfst*.
- **third pattern:** *ich mag, du magst, er mag*.
- **the traps:** **bekommen** is “receive,” never “become”; **also** is “therefore,” never “also.”

Your turn

Say these aloud:

- “ich mag, du magst, er mag”
- “Ich mag die Katze. Der Hund mag Wasser. Ich mag das Wetter.”
- *gern* on four — “Ich lese gern. Ich schreibe gern. Ich helfe gern. Ich frage gern.”
- the breakers, then not — “du liest, du nimmst, du hilfst”, “du fragst”
- all eight “I” forms — “ich denke, ich verstehe, ich lese, ich schreibe, ich nehme, ich frage, ich helfe, ich mag”
- the roll-call — “denken/think, verstehen/stand, lesen/gather, schreiben/scribere, nehmen/numb, fragen/pray, helfen/help, mögen/may, lieben/love, gern/yearn”

Before you move on

How does German say “I like reading,” literally? (***Ich lese gern*** — “I read gladly.”) Say: you like the cat; the dog likes water. (***Ich mag die Katze. Der Hund mag Wasser.***) Which three of the eight break their vowel? (***Lesen, nehmen, helfen.***) And the two traps — **bekommen**, also? (Receive; therefore.)

Chapter 28

Sitting, Standing, Sleeping, Hearing

Modes: 🗣️ voice (4) 🗣️ Hands-free start: all 4 lessons.

By the end of this chapter: I can say I sit, I stand, I sleep and I hear in German, tell the second shift's t-branch from its p-branch, break a verb's a to ä for du and er, and say which of the four changes German made alone and which it made alongside English.

The chapter closes on hören, the one verb of the four whose vowel cannot break because it was born umlauted: the reader produces all four ich forms and all four er forms, names schlafen as the only breaker, tells Grimm's law on the h of hören and Hund from the second shift on sitzen and schlafen, and hangs gern on the new verb. It reaches back past its own chapter to Chapter 17's Grimm's law, Chapter 22's Hund and Katze with the Hund etymology that had never been revisited, and Chapter 25's mögen, lieben and gern, all three of which were orphans until here.

28.1 sitzen — the same word as *sit*, respelt by one law

Helfen is **help**, split by the second sound shift: Germanic **p** became German **f**. That law has other branches. This verb rides one.

Sounds you'll need

- **tz-affricate** — **tz** is one squeezed sound, *ts*, as in English *cats*.
- **i-short** — a short, tight *i*: **sitzen** = *ZIT-sen*, buzzed at the front because German *s* before a vowel is voiced.

You'll want to know: sitzen

sitzen means “to sit.”

- **ich sitze** — I sit · **wir sitzen** — we sit
- **du sitzt** — you sit · **ihr sitzt** — you all sit
- **er sitzt** — he sits · **sie sitzen** — they sit

Ich sitze. — a whole sentence, two words.

Grammar Lens: strong does not mean it breaks

Sitzen is a **strong** verb — its past is *saß*, not *sitzte*. But its present never breaks its vowel: *du sitzt*, *er sitzt*. Beside it, *helfen* breaks to *du hilfst*.

So “strong” is a fact about a verb’s **past**; the *du/er* break is a separate habit only some strong verbs have.

The doing verbs gave two ways to say you like something: **ich mag** with a thing, **gern** hung on a verb. This verb takes the second.

Ich sitze gern. — “I like sitting.”

The word, taken apart — and its English cousins

sitzen is Proto-Germanic **sitjaną*, and English **sit** is the same inherited word — Old English *sittan*, Old High German *sizzen*. The second, High German shift moved Germanic **p** to **f** in *helfen*. It moved Germanic **t** just as hard, to **z** (said *ts*) or **ss**: *sittan* → **sitzen**, *water* → **Wasser**, *eat* → **essen**, *ten* → **zehn**, *bite* → **beißen**. The food lesson handed you *Wasser* and the first numbers handed you *zehn* long before there was a name for what had happened to them. Under both lies PIE **sed-*, “to sit,” one of the family’s great providers. Latin *sedēre* gives **session**, **sedentary** and **preside**; Latin *sedēs*, “a seat,” gives the bishop’s **see**. Greek *hédra*, also “a seat,” gives

cathedral — the church with the bishop’s chair — and **polyhedron**.

Your turn

Say these aloud:

- “ich sitze, du sitzt, er sitzt” — the *i* never moves
- the contrast — “du sitzt” beside “du hilfst”
- “Ich sitze gern.”
- the *t* branch four times — “sitzen/sit, Wasser/water, essen/eat, zehn/ten”
- the *p* branch beside it — “helfen/help”
- the seat words — “sitzen, sedēre, hédra, cathedral”

Before you move on

Give the *du* and *er* forms of *sitzen*. (***Du sitzt, er sitzt*** — no break.) Which of the doing verbs does break, and how? (***Helfen*** — *du hilfst*.) Which sound did the second shift turn German’s **z** and **ss** out of? (An old **t**.) Name two pairs from that branch. (***Wasser/water, essen/eat, zehn/ten***.) Say you like sitting. (***Ich sitze gern***.)

28.2 stehen — the verb that was hiding inside *verstehen*

Verstehen was broken into *ver-* plus *stehen*, and named *stehen* as English **stand**. Here is that verb alone, and the letter the two languages disagree about.

Sounds you’ll need

- **st-initial-scht** — **st** at the start of a German word is said *sht*.
- **h-silent-lengthening** — the **h** is silent and marks the long vowel: **stehen** = *SHTAY-en*.

You'll want to know: **stehen**

stehen means “to stand.”

- **ich stehe** — I stand · **wir stehen** — we stand
- **du stehst** — you stand · **ihr steht** — you all stand
- **er steht** — he stands · **sie stehen** — they stand

Like *sitzen*, it keeps its vowel all the way through. Two postures, two sentences:

Ich sitze. Ich stehe.

The word, taken apart — and its English cousins

Germanic ran two stems off one root here: a short **stānq* and a longer **standanq* with an **n** wedged inside. English generalised the long one and got **stand**; German took the short one and got **stehen**, Old High German *stān*.

German did not lose the *n*. It kept it in the past: **ich stand**, and the participle **gestanden**. German's past tense is spelt the way English's present is, out of the same drawer of stems.

The root is PIE **steh₂-*, the one *verstehen* named, and it is everywhere. Latin *stāre* gave **state**, **station**, **stable**, **constant**. Greek *hístēmi*, “I set up,” gave **static**, **system** and **ecstasy** — standing outside yourself. German built **die Stadt**, a city: a standing-place. English built **stead**, **steady** and **instead**.

Why it's said this way

Notice the shape of what has happened. *Sitzen* goes back to **sed-*, and so does Latin's *sedēre*. *Stehen* goes back to **steh₂-*, and so does Latin's *stāre*.

Nothing was borrowed in either direction. Two families inherited the same two roots and held them to the same two meanings for thousands of years, because sitting and standing are things everybody does.

Your turn

Say these aloud:

- “ich stehe, du stehst, er steht” — *SHTAY*, not *STAY*
- both postures — “Ich sitze. Ich stehe.”
- the verb inside the verb — “stehen, verstehen”
- where the *n* went — “ich stehe, ich stand, gestanden”
- the Latin pair — “sitzen/sedēre, stehen/stāre”
- what stands in English — “state, station, stable, stead”

Before you move on

Give the *du* and *er* forms. (***Du stehst, er steht.***) Which letter does English’s *stand* carry that German’s *stehen* does not? (An **n**.) Where does German still keep it? (In the **past** — *ich stand, gestanden.*) Which longer verb already taught has *stehen* inside it? (***Verstehen.***) Say “I sit. I stand.” (***Ich sitze. Ich stehe.***)

28.3 schlafen — *sleep*, under two coats of paint

Sitzen and *stehen* held their vowels still. This one does not — and it does not break the way the mind verbs broke either.

Sounds you’ll need

- sch-sh — **sch** is English *sh*: **schlafen** = *SHLAH-fen*.
- vowel-ae — **ä** is a flat *eh*: **schläft** = *SHLEFT*.

You’ll want to know: schlafen

schlafen means “to sleep.”

- ich schlafe · wir schlafen
- du schläfst · ihr schlaft
- er schläft · sie schlafen

Die Katze schläft. — “The cat is sleeping.”

Grammar Lens: the second kind of break

Lesen gave you one break: long *e* goes to *i* for *du* and *er* — *du liest*, *er hilft*. Here is the other: **a** takes two dots and becomes **ä** — *du schläfst*, *er schläft*.

Those two dots are the umlaut, the mark that turns *Buch* into *Bücher*. The break lands in the same slot as before, **du** and **er** and nobody else, so only its raw material is new: *e* verbs brighten to *i*, *a* verbs to *ä*.

Es regnet. Die Katze schläft.

The word, taken apart — and its English cousins

schlafen is Proto-Germanic **slēpaną*, and English **sleep** is the same inherited word — Old English *slæpan*, Old High German *slāfan*.

Two German changes sit between them. The first you know: the second shift, Germanic **p** to German **f**, as in *helfen*. The second is new — German turned **s** into *sh* before *l*, *m*, *n* and *w*, and wrote it down: *sleep* → **schlafen**, *swim* → **schwimmen**, *snow* → **Schnee**, *smith* → **Schmied**. It did the same before *p* and *t* and never spelt it, which is why *stehen* is said *SHTAY-en*.

Now the honest part. The old Indo-European verb for sleeping was **swep-*, still in plain view: Latin *somnus* gives **insomnia** and **somnolent**, Latin *sopor* gives **soporific**, Greek *hýpnos* gives **hypnosis**, and Old Norse *sofa* is Swedish *sova* today. German and English both threw that verb away and built a new one on **sleb-*, “to be slack” — German still has **schlaff**, “limp.” They made that swap **together**, before they were two languages.

Your turn

Say these aloud:

- “ich schlafe, du schläfst, er schläft” — the *a* brightens to *ä*
- the three verbs — “Ich sitze. Ich stehe. Ich schlafe.”
- “Es regnet. Die Katze schläft.”
- both breaks in the same slot — “du hilfst” beside “du schläfst”
- the *sch* row — “schlafen, schwimmen, Schnee, Schmied”

- the verb they both threw away — “somnus, hypnos, sova”

Before you move on

Give the *du* and *er* forms. (***Du schläfst, er schläft*** — two dots on the *a*.) Which two people does a German verb break for? (**Du** and **er**, always.) Name the two changes between *sleep* and *schlafen*. (**p** to **f**, and **s** to **sch**.) Why is *stehen* said *SHTAY-en*? (**Same change**, never spelt.) Say “the cat is sleeping.” (***Die Katze schläft***.)

28.4 hören — *hear*, and the end of a chapter that never moved

Ich sitze. Ich stehe. Ich schlafe. Three verbs that stay put.
Here is the fourth — the sense that works with your eyes shut.

Sounds you’ll need

- umlaut-oe — **ö** is the *e* of *bed* said with rounded lips.
- r-uvular — the **r** is a soft scrape at the back: **hören** = *HUR-en*.

You’ll want to know: hören

hören means “to hear.”

- **ich höre · wir hören**
- **du hörst · ihr hört**
- **er hört · sie hören**

The **ö** never moves. *Schlafen* grew its dots for *du* and *er*; *hören* was born with them, so nothing is left to break.

Der Hund hört. Die Katze hört.

Grammar Lens: liking it, the mögen way

gern hangs on this verb like any other:

Ich höre gern. — “I like listening.”

Gern is English **yearn**: underneath, “I hear yearningly.” Beside it is the other way of liking, **ich mag** — English **may**, with the power drained out.

The word, taken apart — and its English cousins

hören is Proto-Germanic **hauzijanq*, and English **hear** is the same inherited word.

This time the change is one they **share**. Gothic still says *hausjan*, with an **s**; Old English *hīeran* and Old High German *hōren* had both turned it to **r**. *Sitzen* shows where German left English; *hören* shows a road they walked together.

The **h** is Grimm’s law, the first shift: an old **k** became Germanic **h**. Greek kept the *k* — *akoúein*, “to hear,” which English borrowed back as **acoustic**. Same swap that made **kwon-* into **Hund** while Latin kept *canis*.

Some break the root up further, into “sharp” plus “ear” — which would make *hören* “sharp-eared” and put **das Ohr** inside it. Cited often, not settled.

Why it’s said this way

gehören means “**to belong**.” It is *ge-* welded onto *hören*, and began as “to hearken to”: what belongs to you answers when called.

Your turn

Say these aloud:

- all four — “Ich sitze. Ich stehe. Ich schlafe. Ich höre.”
- the four *er* forms — “er sitzt, er steht, er schläft, er hört”
- “Der Hund hört. Die Katze schläft.”
- “Ich höre gern.”
- the shared change — “hausjan, hīeran, hören”
- the *h* row — “hören/akoúein, Hund/canis”
- “gehören is *belong*”

Before you move on

Give all four *ich* forms of this chapter. (***Ich sitze, ich stehe, ich schlafe, ich höre.***) Which breaks its vowel? (***Schlafen*** — *a* to *ä*.) Which letter did Gothic keep where German and English have *r*? (An *s*.) Which law put the *h* on *hören* and *Hund*? (**Grimm's law**.)

Chapter 29

Going, Running, Opening, Closing

Modes: 🗣️ voice (4) 🗣️ Hands-free start: all 4 lessons.

By the end of this chapter: I can say I go, I run and I open and close my hand in German, split a separable verb so its prefix waits at the end of the sentence, and say why German's line between walking and running is not where English draws it.

The chapter closes on schließen, the second verb in these chapters that German kept and English lost: the reader produces all of Chapter 27's verbs, splits both aufmachen and zumachen around die Hand, names Schloss, Schlüssel and Schluss as the household built on the kept verb, and runs the eight-verb morning that closes Chapters 26 and 27 together. It reaches back to Chapter 25's nehmen and the second shift on helfen, to Chapter 17's Hand and its final-d devoicing, which had never been revisited, and to Chapter 26's sitzen, stehen and hören.

29.1 gehen — go, and the word German never needed for walk

Four verbs that stayed put — sitting, standing, sleeping, hearing. Now a chapter that moves, opening on the verb German uses where English has two.

Sounds you'll need

- **h-silent-lengthening** — the **h** is silent and lengthens: **gehen** = GAY-en, built exactly like *stehen*, *SHTAY-en*.
- **ge-prefix** — **ge-** at the front is said *guh*, never *jee*.

You'll want to know: *gehen*

gehen means “to go” — and also “to walk.” German does not split those.

- *ich gehe* · *wir gehen*
- *du gehst* · *ihr geht*
- *er geht* · *sie gehen*

Ich stehe. Ich gehe.

Two verbs cut to the same short shape, each with a silent *h* propping the vowel up. Say them together and you hear a matched pair: *SHTAY-en*, *GAY-en*.

The word, taken apart — and its English cousins

gehen is Proto-Germanic **gānq* and English *go* is the same inherited word, Old English *gān*.

Both languages then hit the same problem: the verb had no usable past, and each went shopping. English took *went*, really the past of *wend*, and left *wend* stranded. German took *ging* and *gegangen* from another old verb, **ganganq*, “to walk” — which English still owns in *gangway*, *gangplank*, and Scots *gang*, “to go.”

Gegangen carries the same *ge-* you met on *gehören*: an old prefix German fastens to a past participle.

Beyond Germanic, be honest — the deeper root of *go* is **disputed**, with no agreed list of cousins. It is the one verb here that cannot be followed back.

Why it's said this way

Because *walk* is not an old word for travelling on foot. Old English *wealcan* meant “to roll, to toss,” and its German cousin *walken* still means what it always meant: **to full cloth**, to work wool by trampling it.

English promoted that trampling verb around 1200. German never did, so *gehen* covers both jobs.

Your turn

Say these aloud:

- “ich gehe, du gehst, er geht”
- the matched pair — “Ich stehe. Ich gehe.”
- the borrowed pasts — “go/went” beside “gehen/ging/gegangen”
- where English kept the other verb — “gangway, gangplank”
- the *ge-* on both — “gehören, gegangen”
- what *walken* does — it fulls cloth, it does not travel

Before you move on

Give the *du* and *er* forms. (***Du gehst, er geht.***) Which English verb is *gehen*? (**Go**, and **walk** as well.) Where did *went* come from? (From ***wend.***) What does German’s cousin of *walk* mean? (**To full cloth.**) How far back can *gehen* be traced? (**Not past Germanic.**)

29.2 laufen — the verb that lies across English’s line

Ich gehe covers going and walking. German has two words for *run*, and one of them is not only about running.

Sounds you’ll need

- diphthong-au — **au** is the *ow* of *house*: **laufen** = *LOW-fen*.
- diphthong-eu — **äu** is the *oy* of *boy*: **läuft** = *LOYFT*.

You’ll want to know: **laufen**

laufen means “to run” — and often “to walk.”

- **ich laufe · wir laufen**
- **du läufst · ihr lauft**
- **er läuft · sie laufen**

The *schlafen* break is here too, in the same *du* and *er* slot: **au** brightens to **äu**.

Der Hund läuft.

Why it's said this way

English draws a hard line between *walk* and *run*. German draws it elsewhere, and leaves one verb lying across it.

- **gehen** — on foot, unhurried.
- **laufen** — on foot at any speed at all.
- **rennen** — flat out. *ich renne, du rennst, er rennt*.

So **Wir laufen** is “we’re walking” or “we’re running,” and only the situation tells you which. That holds across most of Germany. In **Austria** it does not: there *laufen* means *run*. This book teaches the German usage.

Der Hund rennt. — no ambiguity left.

The word, taken apart — and its English cousins

laufen is Proto-Germanic **hlaupanq*, and English kept it as **leap** — Old English *hlēapan*. One more **p** against **f**, the second shift, on the pattern of *helfen/help*, *offen/open* and *schlafen/sleep*.

English holds three more scraps: **lope**, and — through Dutch relatives of the same verb — **elope** and **interloper**, both people running off.

Outside Germanic there are **no secure cousins**.

Rennen is a sharper story. Germanic had **rinnanq*, “to run, to flow,” and beside it a causative **rannijanq*, “to make something run.”

German fused the two into **rennen** and kept *rinnen*, “to trickle,” alongside. English fused the same two into **run** — one merger, carried out separately in each language.

Your turn

Say these aloud:

- “ich laufe, du läufst, er läuft” — *LOW-fuh, LOYFST, LOYFT*
- the three speeds — “Ich gehe. Ich laufe. Ich renne.”
- “Der Hund läuft. Der Hund rennt.”
- the *p/f* row now four long — “helfen/help, offen/open, schlafen/sleep, laufen/leap”

- the runaways — “lope, elope, interloper”
- the doubled merger — “rinnen, rennen” beside English’s one *run*

Before you move on

Give the *du* and *er* forms of *laufen*. (***Du läufst, er läuft*** — *au* to *äu*.) Which English verb is *laufen*? (**Leap** — and it means *run*.) Which German verb means only “run fast”? (***Rennen***.) Does **Wir laufen** mean walking or running? (**Either** — except in Austria, where it is running.) Say “the dog runs.” (***Der Hund rennt***.)

29.3 öffnen — *open*, which was always the word *up*

Ich gehe. Ich laufe. Ich renne. Now something done with the hands, and the German habit that breaks a verb in two.

Sounds you’ll need

- umlaut-oe — **ö** is the *e* of *bed* with rounded lips.
- fn-cluster — **-fn-** runs straight together: **öffnen** = *UFF-nen*.

You’ll want to know: öffnen

öffnen means “to open.”

- **ich öffne · wir öffnen**
- **du öffnest · ihr öffnet**
- **er öffnet · sie öffnen**

An extra **e** slips in for *du*, *er* and *ihr*, because *öffnst* cannot be said. Now a noun you already have, whose **d** is spoken as a **t**:

Ich öffne die Hand. — “I open my hand.” (*dee Hant*)

Grammar Lens: a verb that comes apart

Öffnen is the neutral, slightly formal word. What people say out loud is **aufmachen**, and both halves are yours already: **auf** from *auf Wiedersehen*, **machen** from your first verbs.

Here is the German part. In an ordinary sentence, **the prefix leaves the verb and waits at the end**:

Ich mache die Hand auf. — literally “I make the hand up.”

Machen takes the slot after *ich*; *auf* goes to the back and sits there. German does this to hundreds of verbs, and calls them **separable**.

The word, taken apart — and its English cousins

Behind the verb is the adjective **offen**, “open” — which the doing verbs already put beside **open** as a **p-to-f** pair from the second shift. The better secret is that **neither word is a root**. Old English *open* goes back to Proto-Germanic **upana-*, “put up,” formed on the word that is now English **up** — it has the shape of a past participle, though no such verb “to up” is attested. German ran the same sum and got *offen*, which is why *offen* and **auf** are relatives and not merely neighbours.

So *aufmachen* is not a quaint compound. It is the ancient recipe for “open,” rebuilt out loud — and German pulls it apart every time you use it.

Your turn

Say these aloud:

- “ich öffne, du öffnest, er öffnet” — the extra *e*
- “Ich öffne die Hand.” — *dee Hant*
- the split — “Ich mache die Hand auf.”
- the *p/f* pair — “offen/open”
- what it is made of — “auf, up, offen, open”
- the feet verbs before the hand one — “Ich gehe. Ich laufe. Ich renne.”

Before you move on

Give the *du* and *er* forms. (*Du öffnest, er öffnet.*) Which older word is *offen* built from? (**Auf** — English **up**.) Where does *auf* go in **Ich mache die Hand auf?** (**To the end.**) What is such a verb called? (**Separable.**) How is the *d* of *Hand* spoken? (As a **t**.)

29.4 schließen — the second verb English lost

You can open a hand two ways, **ich öffne** and **ich mache ... auf**. Closing works the same, and the closing verb has the stranger history.

Sounds you'll need

- ie-long-ee — **ie** is a long *ee*: **schließen** = *SHLEE-sen*.
- eszett — **ß** is a sharp *s*, and it appears here because the *ee* before it is long.

You'll want to know: schließen

schließen means “to close,” and also “to lock.”

- **ich schließe** · **wir schließen**
- **du schließt** · **ihr schließt**
- **er schließt** · **sie schließen**

Its everyday partner is **zumachen** — *zu* plus *machen* — splitting exactly as *aufmachen* did:

Ich schließe die Hand. Ich mache die Hand zu.

The vowel shortens in the past, and the moment it does the **ß** becomes **ss**: *schließen*, but *schloss*.

The word, taken apart — and its English cousins

schließen is Proto-Germanic **sleutana*, “to shut, to bolt.” Dutch kept it as *sluiten*. **English has nothing** — no inherited cousin at all.

So English closes things with borrowed and unrelated words. **Close** is Latin *claudere*, by way of French. **Shut** is native but a different verb entirely: Old English *scyttan*, to **shoot** a bolt across a door. That makes two verbs here with the same shape of story. The doing verbs gave you *nehmen*, which English lost to Norse *take*. This is the second.

On the verb it kept, German built a household: **das Schloss**, a lock — and, because a castle is the locked place, a castle; **der Schlüssel**, a key; **der Schluss**, the end. English says **conclusion** for that last one, from *claudere* — the same idea out of the other family’s parts. A link between the Germanic verb and Latin *claudere* has been **proposed**. It is not established.

What you’ve built across these two chapters

Eight verbs, and a whole small morning:

**Ich schlafe. Ich höre. Ich stehe. Ich gehe. Ich laufe.
Ich renne. Ich sitze. Ich mache die Hand auf. Ich
mache die Hand zu.**

Your turn

Say these aloud:

- “ich schließe, du schließt, er schließt”
- the pair — “Ich mache die Hand auf. Ich mache die Hand zu.”
- the spelling swap — “schließen, schloss”
- the household — “Schloss, Schlüssel, Schluss”
- the two lost verbs — “nehmen, schließen; English took *take* and *close*”
- the four *p/f* pairs — “helfen/help, offen/open, schlafen/sleep, laufen/leap”
- the whole morning — “Ich schlafe. Ich höre. Ich stehe. Ich gehe. Ich laufe. Ich renne. Ich sitze.”

Before you move on

Give the *du* and *er* forms. (***Du schließt, er schließt.***) Which English verb is the cousin of *schließen*? (**None** — English lost it.) Where did *close* and *shut* come from? (**Latin**, and from **shoot**.) Name three words German hung on the verb. (**Schloss, Schlüssel, Schluss.**) Close your hand, both ways, then run the eight verbs.

Chapter 30

Coffee, Tea, and Milk

Modes: 🗣️ voice (3) 🗣️ Hands-free start: all 3 lessons.

By the end of this chapter: I can politely ask for coffee, tea, or milk in German, and say which of the three words is native and which two are loans.

The chapter closes on Milch, the native word beside two loans: the reader produces all three drinks with der/die articles, extends Chapter 19's Wasser, bitte pattern to Kaffee, bitte and Tee, bitte, and states each word's route — Kaffee overland through Arabic, Turkish and Italian; Tee by sea from Hokkien Chinese by way of Dutch; Milch never borrowed at all. It reaches back to Chapter 19's bitte pattern and rescues Chapter 27's final atoms, GE-LEX-SCHLIESSEN-10 and GE-ETYMON-SCHLIESSEN-11, which no lesson had revisited.

30.1 der Kaffee — the drink that closes one chapter and opens another

The last chapter ended by closing a hand. Now open the day with something to drink — and a new use for a request pattern you already own.

You'll want to know: der Kaffee

der Kaffee — coffee. Masculine.

Bitte taught you a complete polite request out of two known words: **Wasser, bitte**. The same pattern takes any drink you can name:

Kaffee, bitte. — Coffee, please.

Sounds you'll need

Kaffee is said two ways, and both are standard: many speakers in the north stress the first syllable, **KAF**-fay; many in the south, and most international learners' material, stress the second, kaf-**FAY**. Unlike *gehen* and *laufen*'s Germany/Austria split, this one is not regional in any strict sense — you will hear both from native speakers in the same city.

The word, taken apart — and its English cousins

Kaffee is a loanword, and a young one by this book's standard — nothing like *Wein*'s two-thousand-year-old borrowing from Latin *vīnum*. The word travelled **Arabic qahwa** → **Ottoman Turkish kahve** → **Italian caffè** → **German Kaffee**. English *coffee* and French *café* took the same Italian step, which is why the whole spread of European words for the drink still rhymes with each other despite crossing four language families to get here.

The last chapter closed on **schließen**, a verb Proto-Germanic built and English lost outright. *Kaffee* is the opposite kind of word: nothing here is inherited, and nothing needed to be — German simply took the whole word, sound and all, the way it took *Wein* centuries earlier.

Your turn

Say these aloud:

- “der Kaffee” — either stress, both correct
- “Kaffee, bitte.” — the *bitte* pattern, one word swapped
- the route — “qahwa, kahve, caffè, Kaffee”

Before you move on

Give “coffee” with its article. (**Der Kaffee**.) Ask for it politely. (**Kaffee, bitte**.) Name the three languages the word crossed before German. (**Arabic, Turkish, Italian**.) Is *Kaffee* inherited like *schließen*, or borrowed like *Wein*? (**Borrowed**.)

30.2 der Tee — the same loan as English, by the same ship

Kaffee came overland through Turkey and Italy. The next drink took a completely different road — by sea.

You'll want to know: der Tee

der Tee — tea. Masculine.

Tee, bitte. — Tea, please.

Sounds you'll need

Tee is spelled almost exactly like the English word it translates, and said nothing like it. German **ee** is a long, steady *ay*: **Tee** = *TAY*, not *tea*'s *ee*. Looking alike on the page and sounding different is its own small trap — worth naming so it doesn't catch you.

The word, taken apart — and its English cousins

Tee is Hokkien Chinese *tê*, the word for the plant in the coastal Chinese dialect that Dutch traders dealt with directly. Dutch **thee** carried it into Europe by sea, and German took the word from Dutch — the same route English **tea** followed, which is why *Tee* and *tea* match as closely as they do.

That is not the only road this word took. Languages reached by the **overland** trade routes out of northern China took a different syllable of the same Chinese word: **Hindi *chai*, Russian *chai*, Turkish *çay***. One plant, one Chinese word, two pronunciations of it — split by whether a language got the word from a ship or a caravan. *Kaffee*'s three-hop route through Turkish and Italian was its own single path; tea forked into two.

Your turn

Say these aloud:

- “der Tee” — say it *TAY*, not *tea*
- “Tee, bitte.” — “Kaffee, bitte.” — same pattern, two drinks
- the fork — “tê, thee, Tee, tea” by sea; “chai, chai, çay” overland

Before you move on

Give “tea” with its article, and say it correctly. (**Der Tee** — *TAY*.) Which language gave German the word, and by what route? (**Hokkien Chinese *tê*, by way of Dutch sea trade.**) Name one language that got the same Chinese word overland instead. (**Hindi, Russian, or Turkish.**) Does *Tee* sound the way it’s spelled in English? (**No** — same letters, different vowel.)

30.3 die Milch — the one that was never borrowed

Kaffee came from Arabic by way of Turkish and Italian. *Tee* came from Chinese by way of Dutch. The third drink needed no ship and no caravan — German already had it.

You’ll want to know: die Milch

die Milch — milk. Feminine.

Milch, bitte. — Milk, please.

Sounds you’ll need

German’s **ch** is not one sound but two. After a back vowel like the *a* of *Nacht*, it is a rasp at the back of the throat. After a front vowel or consonant like the *i* of **Milch**, it is soft, made further forward — closer to a hissed *h*. Say *ich* (your own word for “I”) right before *Milch* and you are making the same sound twice.

The word, taken apart — and its English cousins

Milch is native Germanic, from ***meluks**, and further back from Proto-Indo-European ***h₂melg-**, “to milk” — the action came first, and the word for the substance is simply that verb, frozen into a noun. English **milk** is the exact same word, inherited rather than borrowed, which makes it the cousin of German *Melker* (“milker”) the way *denken* is the cousin of *Dank*.

So the trio closes the way the food lesson did: **Wasser** was native beside the loanword **Wein**; here, **Milch** is native beside the loanwords

Kaffee and **Tee**. Two loans, one inherited word, in both chapters — but this time the loans arrived from opposite directions on the map, one overland and one by sea, and only the native word needed no journey at all.

Your turn

Say these aloud:

- “die Milch” — the soft *ch*, as in *ich*
- all three requests — “Kaffee, bitte. Tee, bitte. Milch, bitte.”
- the shape of the chapter — “Wasser native, Wein borrowed; Milch native, Kaffee and Tee borrowed”

Before you move on

Give “milk” with its article. (**Die Milch.**) Is it native or borrowed? (**Native** — inherited **meluks*, the twin of English *milk*.) Which two drinks in this chapter were borrowed, and from where? (**Kaffee** from Arabic/Turkish/Italian; **Tee** from Hokkien Chinese by way of Dutch.) Which earlier chapter set up the exact same native/borrowed shape? (**Chapter 11 — Wasser and Wein.**)

Chapter 31

Friend and Family

Modes: 🗣️ voice (3) 🗣️ Hands-free start: all 3 lessons.

By the end of this chapter: I can name a friend, male or female, and my family in German, build a feminine person-noun with -in, and say which of the three words is native and which is borrowed.

The chapter closes on Familie, the one Latin loan beside two native words: the reader produces der Freund, die Freundin and die Familie with articles, builds the feminine -in suffix on a masculine person-noun and names its one English fossil (vixen), and states that Familie gathers the very members Chapter 10 already named (Vater, Mutter, Bruder, Schwester, Geschwister). It reaches back to Chapter 2's freut mich, which shares Freund's root, and to Chapter 10's family words.

31.1 der Freund — a word that was already a compliment

You were taught **freut mich** — “pleased to meet you,” literally “it gladdens me.” The person doing the gladdening has a name of their own, and it is built from the very same root.

You'll want to know: der Freund

der Freund — friend (male, or a friend in general). Masculine.

Das ist der Freund. — “This/That is the friend.”

Sounds you'll need

eu is a diphthong said *oy*, exactly as in English *boy*: **Freund** = *FROYND*. It is the same sound spelled **äu** in *Häuser* and *läuft*, just without the umlaut in front of it.

The word, taken apart — and its English cousins

Freund and English **friend** are not merely cousins — they are the exact same inherited word, Proto-Germanic **frijōnds*. That word was never a plain noun to begin with: it is a **frozen present participle** of the verb **frijōnā*, “to love,” so *Freund* literally means “the one who is loving.” *freut mich* is built on the same family: both trace to Proto-Indo-European **preyH-*, “to love, to please.” The goddess **Frigg** — whose day German keeps as *Freitag* and English as **Friday** — carries the same root one step further.

Milch needed no journey to reach German; *Freund* did not either — but where *Milch* is a noun that was always a noun, *Freund* is a verb that stopped moving and became one.

Your turn

Say these aloud:

- “der Freund” — *FROYND*
- “Das ist der Freund.”
- the family — “Freund, freut mich, Frigg, Friday — all one root”

Before you move on

Give “friend” with its article. (**Der Freund**.) What part of speech did *Freund* start out as? (**A verb** — a frozen present participle of “to love.”) Which greeting phrase shares its root? (**Freut mich**.) Which day of the week carries the same PIE root one step further? (**Freitag** / **Friday**, from the goddess **Frigg**.)

31.2 die Freundin — one suffix, and the fox that kept it in English

You have **der Freund**. German does not need a new word for the feminine — it needs one small, reusable ending.

You'll want to know: die Freundin

die Freundin — friend (female). Feminine.

Das ist die Freundin. — “This/That is the (female) friend.”

Grammar Lens: the ending that builds a whole class of nouns

Add **-in** to a masculine noun for a person and you get the feminine: **der Lehrer** → **die Lehrerin** (“teacher”), **der Student** → **die Studentin** (“student”), **der Freund** → **die Freundin**. It is entirely regular, and it works on almost any such noun you will ever meet — one rule, not a new word each time.

The word, taken apart — and its English cousins

-in is native Germanic, not a Latin import — English inherited the same suffix and mostly stopped using it. Almost mostly: one English word still carries it, fossilized, unrecognized as a suffix by most speakers who use it — **vixen**, “female fox,” built the same way *Freundin* is built. English did not lose this pattern by borrowing over it; it simply stopped reaching for it, and later borrowed French *-ess* (**princess**, **actress**) to do the same job instead. German never stopped.

Your turn

Say these aloud:

- “die Freundin” — Freund plus -in
- “Das ist die Freundin.”
- the pattern — “Lehrer/Lehrerin, Student/Studentin, Freund/Freundin”
- the English fossil — “fox, vixen — the same -in, once”

Before you move on

Give “friend (female)” with its article. (**Die Freundin.**) What suffix builds it from *Freund*, and what does that suffix do generally? (**-in** — it makes the feminine of a person-noun.) Is *-in* borrowed or native? (**Native** — English inherited it too.) Name the one English word that still shows it. (**Vixen.**)

31.3 die Familie — the word that gathers Eltern and Geschwister

You have **der Freund** and **die Freundin**, both native, both built on a verb meaning “to love.” The word for the group at home has a completely different history.

You’ll want to know: die Familie

die Familie — family. Feminine.

Das ist die Familie. — “This/That is the family.”

You already have the members: **Vater, Mutter, Bruder, Schwester** — and the collective **Geschwister**, “siblings.” *Familie* is the word that gathers all of them into one group.

Sounds you’ll need

Familie keeps all three vowels distinct: *fa-MEE-lee-eh*, four syllables in careful speech, with the stress on the second. It does not collapse the way English *family* does.

The word, taken apart — and its English cousins

Familie is a Latin loan: **familia**, “household,” related to **famulus**, “servant” or “slave” — a Roman household word, not originally a word about blood relation at all. English **family** borrowed the very same Latin root, by way of Old French, well before German did; German took *Familie* directly from Latin later, in the early modern period, which is why the two loans look so close to identical without one having been copied from the other.

So this small chapter runs the same shape twice: **Freund** and

Freundin are native, built from a Germanic verb meaning “to love”; **Familie** is borrowed, from a Roman word that first meant “household staff.” The food lesson set up exactly this pattern with **Wasser** native beside **Wein** borrowed, and the drinks just ran it a third time with **Milch** beside **Kaffee** and **Tee**.

Your turn

Say these aloud:

- “die Familie” — *fa-MEE-lee-eh*
- “Das ist die Familie.”
- the members inside it — “Vater, Mutter, Bruder, Schwester, Geschwister”
- native beside borrowed — “Freund, Freundin native; Familie borrowed”

Before you move on

Give “family” with its article. (**Die Familie.**) Is it native or borrowed? (**Borrowed** — Latin *familia*, “household.”) What did *familia* first mean, before “relatives”? (**Household** — kin to *famulus*, “servant.”) Which two words from this chapter are native instead? (**Freund** and **Freundin.**)

Chapter 32

Eyes, Ears, Mouth, Nose

Modes: ⇄ voice (4) ⇄ Hands-free start: all 4 lessons.

By the end of this chapter: I can name the eye, ear, mouth, and nose in German, and say which of the four traces to a confirmed ancient root and which does not.

The chapter closes on Nase, cousin of both English nose and Latin nasus by separate descent: the reader produces all four face parts with articles and plurals, names Auge and Ohr as words with confirmed Proto-Indo-European roots, names Mund as inherited but not traced further, and completes Chapter 17's face by running Kopf, Auge, Ohr, Mund, Nase, Hand together. It reaches back to Chapter 17's Kopf and Hand and to Chapter 26's hören, rescuing the disputed 'sharp-eared' link between hören and Ohr.

32.1 das Auge — back to the head, one part at a time

You already have **der Kopf** and **die Hand**. The head has more in it than its own name — starting with what you see with.

You'll want to know: das Auge

das Auge — eye. Neuter.

Das ist das Auge. — “This/That is the eye.”

The plural is **die Augen** — both eyes together, the form you will hear far more often than the singular.

Sounds you'll need

au is a diphthong said *ow*, as in English *how*: **Auge** = *OW-geh*.

The word, taken apart — and its English cousins

Auge is Proto-Germanic **augô*, the direct cousin of English **eye** — both inherited, no loan in either direction, from Proto-Indo-European **h₃ek^w-*. That root did not stay hidden in only the Germanic family: Latin turned it into **oculus** (giving English **ocular**, **binoculars**), and Greek into **ophthalmós** (giving English **ophthalmology**). Three branches of one family tree, and English ended up borrowing back two Latin and Greek reflexes of the very root it had already inherited natively as *eye*.

Kopf was a container word that took over the everyday job. *Auge* needed no such replacement — it has meant “eye” the whole way down.

Your turn

Say these aloud:

- “das Auge” — *OW-geh*; “die Augen” — both eyes
- “Das ist das Auge.”
- the three-family root — “Auge/eye, Latin *oculus*, Greek *ophthalmós*”

Before you move on

Give “eye” with its article, and its plural. (**Das Auge, die Augen**.) Is it native or borrowed? (**Native** — cousin of English *eye*.) Name one English word borrowed from the *same* PIE root by way of Latin or Greek. (**Ocular, binoculars, or ophthalmology**.)

32.2 das Ohr — the part hören was named for

You have the eye. You already have the verb for what the next part does — **hören**, “to hear” — without ever naming the part itself.

You'll want to know: das Ohr

das Ohr — ear. Neuter.

Das ist das Ohr. — “This/That is the ear.”

Plural: **die Ohren**.

Sounds you'll need

Ohr is a single long *o*, said the way you'd say the letter itself in English: **Ohr** = *OHR*, no glide, no second vowel.

The word, taken apart — and its English cousins

Ohr is Proto-Germanic **auzô*, the direct cousin of English **ear** — both from Proto-Indo-European **h₂ous-*. One disputed idea about **hören** was already flagged: some accounts break its root into “sharp” plus “ear,” which would put this very word, *Ohr*, hiding inside the verb for using it. That analysis was marked cited but unsettled there, and it stays unsettled here — a tidy story is not the same as a confirmed one. What is confirmed: *Ohr* and *ear* are not two words that happen to sound alike. They are one Germanic word, unbroken since before English and German were different languages.

Your turn

Say these aloud:

- “das Ohr” — a plain long *o*; “die Ohren”
- “Das ist das Ohr.”
- the maybe-link — “hören, Ohr — sharp-eared, unsettled”

Before you move on

Give “ear” with its article and plural. (**Das Ohr, die Ohren**.) Is it native or borrowed? (**Native** — cousin of English *ear*.) What disputed idea would put this word inside *hören*? (**The “sharp-eared” root analysis** — cited, not settled.)

32.3 der Mund — where the family tree runs out

Auge and *Ohr* both trace cleanly to Proto-Indo-European. This one does not go nearly as far back with any certainty — and saying so honestly is the lesson.

You'll want to know: der Mund

der Mund — mouth. Masculine.

Das ist der Mund. — “This/That is the mouth.”

Plural: **die Münder**.

Sounds you'll need

Mund takes a short, closed *u*, as in English *put*: **Mund** = *MOONT* (final *d* devoiced, as in *Hand*).

The word, taken apart — and its English cousins

Mund is Proto-Germanic **munþaz*, and English **mouth** is that same inherited word — no loan in either direction, exactly like *Ohr* and *ear*. Here the two words part company. *Ohr* and *Auge* both trace on to confirmed Proto-Indo-European roots. *Munþaz* does not: proposed deeper connections exist, but no single one is agreed upon by standard references. Rather than hand you a tidy-sounding root that is not actually settled, this lesson stops at Proto-Germanic. An honest “we don’t fully know” is worth more than an invented ancestor.

Your turn

Say these aloud:

- “der Mund” — *MOONT*; “die Münder”
- “Das ist der Mund.”
- the honest stop — “Mund and mouth, inherited — but no further-back root is agreed”

Before you move on

Give “mouth” with its article and plural. (**Der Mund, die M nder.**) Is it native or borrowed? (**Native** — cousin of English *mouth*.) Does its root trace to a confirmed PIE ancestor, the way *Auge* and *Ohr* do? (**No** — the trail goes cold at Proto-Germanic.)

32.4 die Nase — the face, complete

Auge. Ohr. Mund. One part of the face is left, and it closes what *Kopf* opened and never finished.

You’ll want to know: die Nase

die Nase — nose. Feminine.

Das ist die Nase. — “This/That is the nose.”

Plural: **die Nasen.**

Sounds you’ll need

Nase opens on a long, open *a*: **Nase** = *NAH-zeh*, with the *s* voiced to *z* between two vowels — the mirror image of *Hand*’s final *d* devoicing to *t*.

The word, taken apart — and its English cousins

Nase is Proto-Germanic **nasō*, the inherited cousin of English **nose** — and, further back, of Latin **nasus**, which gave English **nasal** and **nostril**. One Proto-Indo-European root, **nas-*, split into Germanic and into Latin independently; German *Nase* and the Latin-derived word are family by **descent**, exactly like *rot* and *rouge*, never by borrowing.

That gives this small face four parts with four different shapes of story: **Auge** and **Ohr** trace cleanly to confirmed PIE roots; **Mund** is inherited but its root before Proto-Germanic is not agreed upon; **Nase** traces to a root Latin also inherited, on its own branch. Four native words, four different depths of certainty — which is the honest way etymology actually looks, not four identical tidy stories.

Your turn

Say these aloud:

- “die Nase” — *NAH-zeh*; “die Nasen”
- “Das ist die Nase.”
- the whole face — “Kopf, Auge, Ohr, Mund, Nase, Hand”
- the cousin — “Nase, nose, nasus — one PIE root, two families”

Before you move on

Give “nose” with its article and plural. (**Die Nase, die Nasen.**) Which Latin word is its distant cousin, and what English word does that Latin word give? (**Nasus**, giving **nasal**.) Name all five face and head words from Chapters 17 and 30. (**Kopf, Auge, Ohr, Mund, Nase.**) Which of the four words of this chapter does not trace past Proto-Germanic? (**Mund.**)

Chapter 33

Arm, Finger, Foot, Heart

Modes: ⇄ voice (4) ⇄ Hands-free start: all 4 lessons.

By the end of this chapter: I can name the arm, finger, foot, and heart in German, completing the Hand/Arm/Finger/Fuß/Herz table Chapter 17 named but did not finish teaching, and say which of the four shows Grimm's law and which sits outside it.

The chapter closes on Herz, the third word in the book to show Grimm's law's k-to-h swap: the reader produces all four words with articles, names Arm as a word outside Grimm's law's reach entirely, Fuß as a second p-to-f case beside Vater, and Finger's disputed link to fünf, and finally completes the five-word table Chapter 17 printed but only taught one-fifth of. It reaches back to Chapter 17's Hand and Grimm's law, Chapter 26's hören, and Chapter 22's Hund, all three of which supply the k-to-h comparison.

33.1 der Arm — the word Hand's own table already named

The *Hand* lesson ran a table — **Hand, Arm, Finger, Fuß, Herz** — to show how closely German and English match on the body. Only *Hand* was actually taught. Here is the second name from that table.

You'll want to know: der Arm

der Arm — arm. Masculine.

Das ist der Arm. — “This/That is the arm.”

Plural: **die Arme**.

Sounds you'll need

Arm is said almost exactly as it is spelled, with German's open *ah* vowel: **Arm** = *AHRM*. Of everything in this chapter, it is the smallest gap between the German word and its English cousin.

The word, taken apart — and its English cousins

Arm is Proto-Germanic **armaz*, the direct cousin of English **arm**, from Proto-Indo-European **h₂er-*, “to fit together, to join.” That same root, by a separate Latin path, gave English **art** (a fitting-together of skill) and **harmony** by way of Greek. *Vater/father* and *Fuß/foot* both show Grimm's law loudly, because their starting consonants were exactly the ones the law changed. *Arm* shows why the law is a **rule about specific sounds**, not a blanket difference between German and English: the consonants in **armaz* were never in the law's path, so nothing had to move, and *Arm* and *arm* still look like the same word today for the same reason *Hand* and *hand* do.

Your turn

Say these aloud:

- “der Arm” — *AHRM*; “die Arme”
- “Das ist der Arm.”
- the point — “Grimm's law only moves the sounds in its path; Arm's sounds were never in it”

Before you move on

Give “arm” with its article and plural. (**Der Arm, die Arme**.) Which earlier table already named this word? (**Hand**'s table — *Hand, Arm, Finger, Fuß, Herz*.) Why does *Arm* look almost identical to English *arm*, when *Vater/father* do not? (**Its sounds were never in Grimm's law's path.**)

33.2 der Finger — maybe “one of the five”

The third name from the *Hand* table, and the first numbers come back for a cameo.

You’ll want to know: der Finger

der Finger — finger. Masculine, spelled and said almost exactly like English.

Das ist der Finger. — “This/That is the finger.”

Plural: **die Finger** — unchanged, one of the small set of German plurals that add nothing at all.

The word, taken apart — and its English cousins

Finger is Proto-Germanic **fingraz*, inherited straight into English with no change of shape at all — the closest match of any word in this chapter.

Why it’s said this way

You were taught **fünf**, “five,” from Germanic **fimf*. One proposed account connects **fingraz* to that very number, as if a finger were once simply “one of the five.” It is a satisfying story, and it shows up often — but it is reported by standard references as **plausible, not proven**: the sound changes needed to get from **fimf* to **fingraz* are not fully regular, so the link stays a proposal rather than a settled fact. Held loosely, the way *hören* held “sharp-eared”.

Your turn

Say these aloud:

- “der Finger” — “die Finger”, unchanged plural
- “Das ist der Finger.”
- the maybe-link — “Finger, fünf — plausible, not proven”

Before you move on

Give “finger” with its article and plural. (**Der Finger, die Finger** — unchanged.) What number might *Finger* be built on, and how certain is that link? (**Fünf, “five”** — **plausible, not proven.**) Name one other word in this book that carries the same kind of unsettled-but-cited etymology. (**Hören’s** “sharp-eared” account.)

33.3 der Fuß — Grimm’s law, on a second word

One name left on the *Hand* table, and it turns out to run the very same sound-law you already learned on a completely different word.

You’ll want to know: der Fuß

der Fuß — foot. Masculine.

Das ist der Fuß. — “This/That is the foot.”

Plural: **die Füße** — the umlaut marking more than one, the same fronting pattern behind *Mann* → *Männer*.

Sounds you’ll need

Fuß = *FOOSS*, a long *u* followed by the sharp *s* spelled **ß**. The colour words already gave you the rule this word follows exactly: **ß** after a **long** vowel, **ss** after a short one — the same reason *weiß* keeps its **ß** while *Fluss* does not.

The word, taken apart — and its English cousins

Fuß is Proto-Germanic **fōts*, cousin of English **foot**, from Proto-Indo-European **pōds*. That opening **p** → **f** is the very shift **Vater/father** showed you — Grimm’s law, run again here on an unrelated word, with the identical result: Latin kept the old *p* in **ped-** (giving English **pedal, pedestrian**), Germanic moved it to *f* in both *Fuß* and *foot*.

This chapter has now shown you two shapes of Grimm’s law and one word that never needed it at all: **Vater** and **Fuß** both shift *p* → *f*; **Arm** sits outside the law’s reach entirely, unchanged in both languages.

Your turn

Say these aloud:

- “der Fuß” — *FOOSS*; “die Füße”
- “Das ist der Fuß.”
- the shift, twice — “Vater/father, Fuß/foot — both p to f”

Before you move on

Give “foot” with its article and plural. (**Der Fuß, die Füße.**)
Which family word already showed this same sound-law step?
(**Vater/father**, both $p \rightarrow f$.) Why does *Fuß* keep its **ß** while *Fluss*
does not? (**Long vowel before it, by the eszett rule.**)

33.4 das Herz — the body list, complete at last

The *Hand* lesson printed a five-word table and taught you one of them. This lesson teaches the fifth and closes it.

You’ll want to know: das Herz

das Herz — heart. Neuter — the one organ word in this chapter that breaks the masculine pattern of *Arm*, *Finger* and *Fuß*.

Das ist das Herz. — “This/That is the heart.”

Plural: **die Herzen.**

Sounds you’ll need

Herz takes a short, open *e*, as in English *bed*: **Herz** = *HAIRTS*, the *z* said *ts*, exactly as in *Katze*.

The word, taken apart — and its English cousins

Herz is Proto-Germanic **hertan*, cousin of English **heart**, from Proto-Indo-European **kērd-*. The opening consonant is Grimm’s law again — old **k** became Germanic **h** — the identical step already heard on **hören** (against Greek *akoúein*, English *acoustic*) and on **Hund**

(against Latin *canis*). Three separate words, one law, heard a third time: *k* stays *k* in the languages that didn't shift, and softens to *h* in every Germanic one.

That five-word list is finally complete. **Hand** was taught that chapter; **Arm**, **Finger**, **Fuß** and now **Herz** waited fourteen chapters for their turn. All five are native Germanic, all five are direct cousins of their English translations, and not one of them was borrowed from anywhere.

Grammar Lens: the whole chapter, run once more

Run this chapter's four words back to back: **der Arm**, said almost exactly as spelled, sitting outside Grimm's law entirely; **der Finger**, identical to English and maybe — not certainly — built on **fünf**; **der Fuß**, the *p* → *f* Grimm's-law twin of *Vater*, its **ß** long-vowel-marked exactly as Chapter 13 taught; and **das Herz**, the *k* → *h* twin of *hören* and *Hund*. Four words, four different sound-law stories, and not one of them borrowed.

Your turn

Say these aloud:

- “das Herz” — *HAIRTS*; “die Herzen”
- “Das ist das Herz.”
- the whole list, complete — “Hand, Arm, Finger, Fuß, Herz”
- the k-to-h swap, three times — “Hund/canis, hören/akoúein, Herz/kardia”

Before you move on

Give “heart” with its article and plural. (**Das Herz, die Herzen.**) Which two earlier words showed the same Grimm's-law *k* → *h* swap? (**Hören** and **Hund.**) Name all five words from that original table, now that all five are taught. (**Hand, Arm, Finger, Fuß, Herz.**) Which one breaks the chapter's masculine pattern, and how? (**Herz** — it is **neuter.**)

Pronunciation — a reference, not a chapter

Not to be read before starting. German spelling is largely phonetic — mostly you say what you see — so this page is short. Each lesson names the sounds its word needs and points here for more.

Vowels

- **a** = open *ah*; **o** = *oh*; **u** = *oo* (*gut* = *goot*).
- Umlauts shift the vowel forward: **ä** ≈ *eh*, **ü** = the front-rounded *ee* (= French *u*).

Consonants that differ

- **ch** after *a/o/u* = a guttural *loch* sound (*Nacht* = *nahkht*); softer after *e/i*.
- **z** = *ts*; **s** before a vowel = *z*; **ß** = a sharp *ss*.
- **h** at word-start *is* pronounced (unlike Spanish/French).
- **w** = English *v*; **v** = English *f*; **j** = English *y*.
- **Final devoicing**: written *-d/-g/-b* are said *-t/-k/-p* (*Abend* = *AH-bent*, *Tag* = *tahk*).

Two habits

- **Every noun is Capitalized** — *Tag*, *Nacht* — not just names.
- **Final devoicing** (above).

The High German Consonant Shift

A decoding tool rather than a rule for *saying* words: German pushed certain consonants forward, so English and German cousins differ predictably.

English	→ German	example
d	t	good → gut, day → Tag
t	s / ss / z	water → Wasser, that → das
p	pf / f	apple → Apfel, ship → Schiff
k	ch	make → machen, book → Buch

(A *different* shift from Grimm's Law, the older PIE→Germanic change shared by both English and German — see the *Nacht* lesson.)

Glossary

This glossary collects every word and phrase taught in the book. Pronunciation appears when it differs from the written form; chapter numbers show where each entry is introduced.

Abend

evening (der Abend — masculine)

Introduced in Chapter 1.

auf

on, upon — the small word the formal goodbye is built on

Introduced in Chapter 4.

auf Wiedersehen

goodbye, formally — literally “on the seeing-again”

Introduced in Chapter 4.

bald

soon — and the same word as English bold

Introduced in Chapter 4.

bis

until, up to — the preposition every soft German goodbye is built from

Introduced in Chapter 4.

bis bald

see you soon — the first of the bis... family

Introduced in Chapter 4.

bis morgen

see you tomorrow — and the bis... family, complete

Introduced in Chapter 4.

bis später

see you later — the vaguest of the bis... family

Introduced in Chapter 4.

bitte

please — and also “you’re welcome,” “here you go,” and “pardon?”

Introduced in Chapter 3.

bitte

please — place the familiar courtesy word after a small request

Introduced in Chapter 21.

bleiben

to stay — a verb that takes *sein* while meaning the exact opposite of change
Introduced in Chapter 18.

danke

thank you — which is really “I think of you”
Introduced in Chapter 3.

das Auge

eye — the third gender back on a body part, and a direct Germanic cousin of English eye
Introduced in Chapter 32.

das Brot

bread — inherited Germanic, the twin of English bread
Introduced in Chapter 11.

das Herz

heart — the last name from the *Hand* table, closing it with the same k-to-h Grimm’s law swap already heard on *hören* and *Hund*
Introduced in Chapter 33.

das Ohr

ear — another direct Germanic cousin of its English translation, and the sense *hören* already named
Introduced in Chapter 32.

das Wasser, der Wein

water and wine — one native Germanic, one ancient Latin loan
Introduced in Chapter 11.

das Wetter, es regnet

weather — a NATIVE Germanic word, unlike Romance’s shared Latin *tempus* family; *Wetter* is the SAME word as English “weather,” and *regnet* is the SAME word as English “rain”
Introduced in Chapter 23.

denken

to think — the verb you already met hiding inside *danke*, and the same inherited word as English *think*
Introduced in Chapter 26.

der / die / das

the (masculine / feminine / neuter)
Introduced in Chapter 1.

der Arm

arm — named on the *Hand* table and now finally taught, a word Grimm’s law never had to touch
Introduced in Chapter 33.

der Bruder, die Schwester

brother and sister — again Germanic twins of the English words
Introduced in Chapter 10.

der Finger

finger — identical to its English cousin, and possibly, though not certainly, built on the word for “five”

Introduced in Chapter 33.

der Freund

friend — a Germanic cousin of English friend, both frozen out of the same old verb meaning “to love”

Introduced in Chapter 31.

der Fuß

foot — the fourth name from the *Hand* table, and the same p-to-f Grimm’s law pattern Vater already taught

Introduced in Chapter 33.

der Kaffee

coffee — a loanword that crossed from Arabic to German by way of Turkish and Italian, and the first word in a new polite request

Introduced in Chapter 30.

der Kopf

the head — masculine, capitalised, with final pf

Introduced in Chapter 19.

der Mund

mouth — the same inherited word as English mouth, with a root the standard accounts do not agree on past Proto-Germanic

Introduced in Chapter 32.

der Tee

tea — a word that looks like its English cousin and is not said like it, and travelled to Europe by sea rather than overland

Introduced in Chapter 30.

der Vater, die Mutter

father and mother — Grimm’s law makes them twins of English father/mother

Introduced in Chapter 10.

die (plural)

the — the one plural article German uses for every gender

Introduced in Chapter 1.

die Familie

family — the whole group the Eltern and Geschwister already named the members of, and this chapter’s one Latin loan beside two native words

Introduced in Chapter 31.

die Freundin

friend (female) — built on Freund with the native feminine suffix -in, the same suffix English kept in exactly one fossil word, vixen

Introduced in Chapter 31.

die Hand

the hand — the same word as English, and unrelated to Romance manus
Introduced in Chapter 19.

die Jahreszeiten

the seasons — native Germanic, unlike the Latin months
Introduced in Chapter 9.

die Milch

milk — the native Germanic word that closes this trio, standing beside two loanwords the way Wasser once stood beside the loanword Wein
Introduced in Chapter 30.

die Monate

the months — Latin loans, like the clock-word Uhr
Introduced in Chapter 9.

die Nase

nose — the fourth face-part, cousin of English nose and of Latin nasus, and the payoff that completes the face *Kopf* only started
Introduced in Chapter 32.

dir

to you — the informal partner of mir
Introduced in Chapter 3.

dreizehn — zwanzig

13–20 — perfectly regular digit+zehn compounds, step for step with English
Introduced in Chapter 12.

du / Sie

you (familiar / formal)
Introduced in Chapter 2.

du bist

you are — bin plus the -st ending you already know, and the one place sein behaves
Introduced in Chapter 16.

du warst

you were — the familiar -st ending again, now on the past stem
Introduced in Chapter 17.

eins, zwei, drei, vier, fünf

the numbers 1–5
Introduced in Chapter 6.

elf, zwölf

11 and 12 — literally “one left over” and “two left over,” the exact twins of eleven and twelve
Introduced in Chapter 12.

Entschuldigung

sorry / excuse me (literally “un-guiling,” from Schuld “guilt/fault”)
Introduced in Chapter 22.

er ist

he is — the form that also serves sie, es and das, and the one that matches Latin est

Introduced in Chapter 16.

er war

he was — the same word as ich war, because the German simple past gives its third person no ending

Introduced in Chapter 17.

es

it — the placeholder German puts in front of a state

Introduced in Chapter 3.

es geht

“it goes” — the German shrug, and what saying nothing extra means

Introduced in Chapter 3.

fahren

to travel, to drive — motion with a vehicle under it, and English fare hiding inside

Introduced in Chapter 18.

fragen

to ask — a weak verb whose vowel stays put, and whose closest English relatives came in from Latin as pray and precarious

Introduced in Chapter 27.

freut mich

pleased to meet you (literally “it gladdens me”)

Introduced in Chapter 2.

gehen

to go — and the verb German uses for “how are you?”

Introduced in Chapter 3.

gehen

to go, and to walk — because German has no separate word for walking, and English’s walk turns out to be a word about cloth

Introduced in Chapter 29.

grün, gelb

green and yellow — grün is native Germanic, the direct cousin of English’s OWN “green” (a different root entirely from Latin’s viridis); gelb is native too, and is usually said to share its ultimate PIE root with French’s jaune, though that particular link is less secure than it first appears

Introduced in Chapter 25.

gut

good; well

Introduced in Chapter 1.

Gute Nacht

good night

Introduced in Chapter 1.

Guten Abend

good evening

Introduced in Chapter 1.

Guten Morgen

good morning

Introduced in Chapter 1.

Guten Tag

hello / good day (polite)

Introduced in Chapter 1.

haben

to have — identical to Latin habēre in sound and sense, and unrelated to it

Introduced in Chapter 14.

hallo

hello (informal)

Introduced in Chapter 1.

heißen

to be called / to be named

Introduced in Chapter 2.

helfen

to help — the same word as English help, separated by one sound law, and still strong in German the way English's help once was

Introduced in Chapter 27.

hören

to hear — the same verb as English hear, and the closing of a chapter of four things you do without going anywhere

Introduced in Chapter 28.

Hund, Katze

dog and cat — Hund is native Germanic, cognate with English's OWN discarded word "hound"; Katze, surprisingly, is NOT native — it's the same borrowed Latin word behind French chat and Spanish gato (though not every European language shares it)

Introduced in Chapter 24.

ich

I

Introduced in Chapter 2.

ich bin

I am — the first form of sein, and it comes from a different verb than the infinitive does

Introduced in Chapter 16.

ich bin zwanzig Jahre alt

age — the one place German refuses haben, siding with English against every Romance sister

Introduced in Chapter 14.

ich habe gesagt

the Perfekt — haben plus a participle wrapped in ge-...-t, and sent to the end of the clause

Introduced in Chapter 15.

ich heiße / du heißt / Sie heißen

one verb, three endings — the ending machine every German verb runs

Introduced in Chapter 2.

ich heiße...

my name is... (literally “I am called...”)

Introduced in Chapter 2.

Ich lerne Deutsch

“I’m learning German” — your first full sentence (Deutsch = German)

Introduced in Chapter 5.

ich sagte

the Präteritum — the simple past in writing and high-frequency speech

Introduced in Chapter 15.

ich war

I was — the past of sein, and a third stem that shares nothing with the other two

Introduced in Chapter 17.

Ihnen

to you, formally — the capitalised to-whom that goes with Sie

Introduced in Chapter 3.

ihr seid

you are, to more than one person — the form English lost when it dropped its plural you

Introduced in Chapter 16.

ja

yes

Introduced in Chapter 20.

kommen

to come — English come with one consonant shifted, and the second verb of the sein family

Introduced in Chapter 18.

laufen

to run — and to walk, because German draws the line in a different place from English, with rennen at the fast end

Introduced in Chapter 29.

lernen

to learn (a third weak verb — the pattern is yours)

Introduced in Chapter 5.

lesen

to read — a verb that first meant “to gather”, and the first one in this book whose vowel changes in the du and er forms

Introduced in Chapter 26.

machen

to make / to do (a second weak verb — same endings)

Introduced in Chapter 5.

mich

me — the object form of ich

Introduced in Chapter 2.

mir

to me, for me — the form German uses for the person a thing happens to

Introduced in Chapter 3.

Mittag, Mitternacht

noon and midnight — native “mid-day” and “mid-night”

Introduced in Chapter 8.

mögen, lieben

to like and to love — plus gern, the adverb that lets any verb say “I like doing this” and has no English shape at all

Introduced in Chapter 27.

Montag, Dienstag, Mittwoch, Donnerstag, Freitag

the weekdays (Monday–Friday) — Germanic gods, twins of the English days

Introduced in Chapter 7.

Morgen

morning (der Morgen — masculine)

Introduced in Chapter 1.

morgen

tomorrow — the second job of the Morgen you already know

Introduced in Chapter 4.

müde

tired — the first adjective that says something about a person, and it needs no ending here

Introduced in Chapter 16.

Nacht

night (die Nacht — feminine)

Introduced in Chapter 1.

nehmen

to take — the verb English lost, though it left numb and nimble behind as fossils

Introduced in Chapter 27.

nein

no

Introduced in Chapter 20.

nicht

not — German’s plain negator

Introduced in Chapter 3.

öffnen

to open — built on *offen*, which is English *open*, which is really the word up; and the doorway into German's separable verbs
Introduced in Chapter 29.

rot, blau

red and blue — an ancient shared root, and a second word German lent to its neighbours
Introduced in Chapter 13.

Samstag, Sonntag

the weekend (Saturday, Sunday) — the Sabbath and the Sun
Introduced in Chapter 7.

schlafen

to sleep — the same word as English *sleep* under two coats of German paint, and a second way for a strong verb to break
Introduced in Chapter 28.

schließen

to close — the second verb in these chapters that German kept and English lost, and the one that locked up *Schloss*, *Schlüssel* and *Schluss*
Introduced in Chapter 29.

schön

beautiful, nice — and the word that upgrades a thank-you
Introduced in Chapter 3.

schreiben

to write — the one verb in this chapter German did not inherit but borrowed, from Latin *scribere*
Introduced in Chapter 26.

schwarz, weiß

black and white — both native Germanic, and one of them German lent to half of Europe
Introduced in Chapter 13.

sechs, sieben, acht, neun, zehn

the numbers 6–10
Introduced in Chapter 6.

sehen

to see — a straight cognate of English *see*
Introduced in Chapter 4.

sehr

very — the intensifier that turns *gut* into a real answer
Introduced in Chapter 3.

sein

to be — the partner of *haben*, and the most irregular verb German has
Introduced in Chapter 16.

sie sind / Sie sind

they are, and the polite you are — one form, and the capital letter is the only difference

Introduced in Chapter 16.

sitzen

to sit — the same inherited word as English sit, respelt by the other branch of the shift that separated *helfen* from *help*

Introduced in Chapter 28.

so lala

so-so — the sing-song middle of the answer ladder

Introduced in Chapter 3.

spät

late — and *später*, “later,” your first comparative

Introduced in Chapter 4.

stehen

to stand — the verb hiding inside *verstehen*, and the one place German keeps a letter English put in the wrong tense

Introduced in Chapter 28.

Tag

day (*der Tag* — masculine)

Introduced in Chapter 1.

tschüss

bye, casually — and secretly the same blessing as *adiós*

Introduced in Chapter 4.

Uhr

clock / o'clock — and a Latin word inside German

Introduced in Chapter 8.

und

and — and the two-word move that returns a question

Introduced in Chapter 3.

verstehen

to understand — literally “to stand around a thing”, the same picture English built independently in *understand*

Introduced in Chapter 26.

vielen Dank

many thanks — the noun behind *danke*, and the warmest everyday thank-you

Introduced in Chapter 3.

werden

to become — the change-of-state half of the rule, in one word

Introduced in Chapter 18.

wie

how

Introduced in Chapter 2.

Wie geht es dir?

how are you? — informal, and every piece already yours

Introduced in Chapter 3.

wie heißen Sie?

what's your name? (literally “how are you called?”)

Introduced in Chapter 2.

wieder

again — the “back” hiding inside withdraw

Introduced in Chapter 4.

wir sind

we are — the plural form, and the first one that looks like the infinitive

Introduced in Chapter 16.

wir waren

we were — the plural past, and the last form of sein you need

Introduced in Chapter 17.

wohnen

to live / to dwell (your first regular “weak” verb)

Introduced in Chapter 5.

Review Questions

Try these without looking ahead. Every prompt comes from the same canonical lesson data as its chapter. Answers begin in the next section.

Chapter 19

19.1 *Kopf / Haupt* — *two head-words*

Which inherited German head-word survives in compounds such as Hauptstadt?

Answer Key

The first response is the canonical display answer. When a question accepts other authored forms, they appear underneath.

Chapter 19

19.1 *Kopf / Haupt — two head-words*

Answer: Haupt

Index

Look up an English meaning, a dedicated language topic, or a chapter topic. Each linked reference opens the chapter where the material is introduced; the focus labels name only explicitly typed lesson sections.

0–9

F

Family

chapter topic; Chapter 10, p. 97

family — the whole group the Eltern and Geschwister already named the members of, and this chapter's one Latin loan beside two native words *die Familie*

explicit focus: pronunciation, etymology; Chapter 31, p. 221

Farewells

chapter topic; Chapter 4, p. 53

father and mother — Grimm's law makes them twins of English

father/mother *der Vater, die Mutter*

explicit focus: etymology; Chapter 10, p. 97

finger — identical to its English cousin, and possibly, though not certainly, built on the word for "five" *der Finger*

explicit focus: etymology, usage and culture; Chapter 33, p. 233

foot — the fourth name from the *Hand* table, and the same

p-to-f Grimm's law pattern Vater already taught *der Fuß*

explicit focus: pronunciation, etymology; Chapter 33, p. 233

friend — a Germanic cousin of English friend, both frozen out of the same old verb meaning "to love" *der Freund*

explicit focus: pronunciation, etymology; Chapter 31, p. 221

Friend and Family

chapter topic; Chapter 31, p. 221

friend (female) — built on *Freund* with the native feminine suffix **-in**, the same suffix English kept in exactly one fossil word,**vixen** *die Freundin*

explicit focus: grammar, etymology; Chapter 31, p. 221

G**gegangen** — the participle that never changes

grammar topic; explicit focus: grammar, usage and culture; Chapter 18, p. 143

Going, Running, Opening, Closing

chapter topic; Chapter 29, p. 205

good evening *Guten Abend*

explicit focus: etymology; Chapter 1, p. 1

good morning *Guten Morgen*

explicit focus: etymology; Chapter 1, p. 1

good night *Gute Nacht*

explicit focus: grammar, etymology, usage and culture; Chapter 1, p. 1

good; well *gut*

explicit focus: pronunciation, grammar, etymology; Chapter 1, p. 1

goodbye, formally — literally “on the seeing-again” *auf**Wiedersehen*

explicit focus: usage and culture; Chapter 4, p. 53

Green and Yellow

chapter topic; Chapter 25, p. 175

green and yellow — *grün* is native Germanic, the direct cousin of English’s OWN “green” (a different root entirely from Latin’s *viridis*); *gelb* is native too, and is usually said to share its ultimate PIE root with French’s *jaune*, though that particular link is less secure than it first appears *grün, gelb*

explicit focus: etymology; Chapter 25, p. 175

Greetings

chapter topic; Chapter 1, p. 1

Großschreibung — why German capitalises every noun

script and writing topic; explicit focus: writing, grammar, usage and culture; Chapter 4, p. 53

H**Hallo** — copy one greeting with help

script and writing topic; explicit focus: writing; Chapter 1, p. 1

he is — the form that also serves sie, es and das, and the one that matches Latin est *er ist*

explicit focus: pronunciation, etymology; Chapter 16, p. 121

he was — the same word as ich war, because the German simple past gives its third person no ending *er war*

explicit focus: pronunciation; Chapter 17, p. 133

Head and Hand

chapter topic; Chapter 19, p. 157

heart — the last name from the *Hand* table, closing it with the same k-to-h Grimm’s law swap already heard on hören and

Hund *das Herz*

explicit focus: pronunciation, grammar, etymology; Chapter 33, p. 233

hello / good day (polite) *Guten Tag*

explicit focus: grammar, etymology; Chapter 1, p. 1

hello (informal) *hallo*

explicit focus: pronunciation, writing, etymology, usage and culture; Chapter 1, p. 1

how *wie*

explicit focus: pronunciation, grammar, etymology; Chapter 2, p. 19

How Are You?

chapter topic; Chapter 3, p. 31

how are you? — informal, and every piece already yours *Wie geht es dir?*

Chapter 3, p. 31

I

I *ich*

explicit focus: pronunciation, etymology; Chapter 2, p. 19

I am — the first form of sein, and it comes from a different verb than the infinitive does *ich bin*

explicit focus: pronunciation, etymology; Chapter 16, p. 121

I Am, You Are

chapter topic; Chapter 16, p. 121

“I’m learning German” — your first full sentence (Deutsch = German) *Ich lerne Deutsch*

Chapter 5, p. 75

I was — the past of sein, and a third stem that shares nothing with the other two *ich war*

explicit focus: pronunciation; Chapter 17, p. 133

ich bin gegangen — the perfect built on sein

grammar topic; explicit focus: pronunciation, grammar; Chapter 18, p. 143

ich bin gewesen — and the rest of the learned list

grammar topic; explicit focus: grammar, etymology; Chapter 18, p. 143

Introducing Yourself

chapter topic; Chapter 2, p. 19

“it goes” — the German shrug, and what saying nothing extra means *es geht*

explicit focus: grammar; Chapter 3, p. 31

it — the placeholder German puts in front of a state *es*

explicit focus: etymology; Chapter 3, p. 31

K**Kopf / Haupt — two head-words**

etymology topic; explicit focus: etymology, usage and culture; Chapter 19, p. 157

L**late — and später, “later,” your first comparative** *spät*

explicit focus: pronunciation, etymology; Chapter 4, p. 53

M**many thanks — the noun behind danke, and the warmest****everyday thank-you** *vielen Dank*

explicit focus: etymology; Chapter 3, p. 31

me — the object form of ich *mich*

explicit focus: etymology; Chapter 2, p. 19

milk — the native Germanic word that closes this trio, standing beside two loanwords the way Wasser once stood beside the loanword Wein *die Milch*

explicit focus: pronunciation, etymology; Chapter 30, p. 215

Months and Seasons

chapter topic; Chapter 9, p. 93

morning (der Morgen — masculine) *Morgen*

explicit focus: pronunciation, grammar, etymology; Chapter 1, p. 1

mouth — the same inherited word as English mouth, with a root the standard accounts do not agree on past Proto-Germanic *der Mund*

explicit focus: pronunciation, etymology; Chapter 32, p. 227

my name is... (literally “I am called...”) *ich heiße...*

explicit focus: usage and culture; Chapter 2, p. 19

N

night (die Nacht — feminine) *Nacht*

explicit focus: pronunciation, grammar, etymology; Chapter 1, p. 1

no *nein*

explicit focus: etymology, usage and culture; Chapter 20, p. 163

noon and midnight — native “mid-day” and “mid-night” *Mittag, Mitternacht*

explicit focus: etymology; Chapter 8, p. 89

nose — the fourth face-part, cousin of English nose and of Latin nasus, and the payoff that completes the face *Kopf* only

started *die Nase*

explicit focus: pronunciation, etymology; Chapter 32, p. 227

not — German’s plain negator *nicht*

explicit focus: etymology; Chapter 3, p. 31

Numbers Eleven to Twenty

chapter topic; Chapter 12, p. 105

Numbers One to Ten

chapter topic; Chapter 6, p. 81

O

on, upon — the small word the formal goodbye is built on *auf*

explicit focus: pronunciation, etymology; Chapter 4, p. 53

one verb, three endings — the ending machine every German

verb runs *ich heiße / du heißt / Sie heißen*

explicit focus: grammar; Chapter 2, p. 19

P

Please

chapter topic; Chapter 21, p. 167

please — and also “you’re welcome,” “here you go,” and “pardon?” *bitte*

explicit focus: pronunciation, etymology, usage and culture; Chapter 3, p. 31

please — place the familiar courtesy word after a small request *bitte*

explicit focus: etymology; Chapter 21, p. 167

pleased to meet you (literally “it gladdens me”) *freut mich*

explicit focus: pronunciation, grammar, etymology; Chapter 2, p. 19

R

red and blue — an ancient shared root, and a second word

German lent to its neighbours *rot, blau*

Chapter 13, p. 109

S

see you later — the vaguest of the bis... family *bis später*

Chapter 4, p. 53

see you soon — the first of the bis... family *bis bald*

Chapter 4, p. 53

see you tomorrow — and the bis... family, complete *bis morgen*

explicit focus: grammar; Chapter 4, p. 53

Sitting, Standing, Sleeping, Hearing

chapter topic; Chapter 28, p. 195

so-so — the sing-song middle of the answer ladder *so lala*

explicit focus: etymology, usage and culture; Chapter 3, p. 31

soon — and the same word as English bold *bald*

explicit focus: etymology; Chapter 4, p. 53

Sorry

chapter topic; Chapter 22, p. 169

sorry / excuse me (literally “un-guiling,” from Schuld “guilt/fault”) *Entschuldigung*

explicit focus: etymology, usage and culture; Chapter 22, p. 169

Suppletion — filling a verb in from another verb

grammar topic; explicit focus: grammar, etymology; Chapter 17, p. 133

T

Taking, Asking, Helping, Liking

chapter topic; Chapter 27, p. 185

tea — a word that looks like its English cousin and is not said like it, and travelled to Europe by sea rather than overland *der Tee*

explicit focus: pronunciation, etymology; Chapter 30, p. 215

Telling the Time

chapter topic; Chapter 8, p. 89

thank you — which is really “I think of you” *danke*

explicit focus: pronunciation, etymology; Chapter 3, p. 31

The Days of the Week

chapter topic; Chapter 7, p. 85

The First Verbs

chapter topic; Chapter 5, p. 75

the hand — the same word as English, and unrelated to**Romance manus** *die Hand*

explicit focus: pronunciation, etymology, usage and culture; Chapter 19, p. 157

the head — masculine, capitalised, with final pf *der Kopf*

explicit focus: pronunciation, grammar, etymology; Chapter 19, p. 157

the (masculine / feminine / neuter) *der / die / das*

explicit focus: pronunciation, grammar, etymology; Chapter 1, p. 1

the months — Latin loans, like the clock-word Uhr *die Monate*

explicit focus: etymology; Chapter 9, p. 93

the numbers 1–5 *eins, zwei, drei, vier, fünf*

explicit focus: pronunciation, grammar, etymology; Chapter 6, p. 81

the numbers 6–10 *sechs, sieben, acht, neun, zehn*

explicit focus: pronunciation, grammar, etymology; Chapter 6, p. 81

The Past That Takes To Be

chapter topic; Chapter 18, p. 143

the Perfekt — haben plus a participle wrapped in ge-...-t, and**sent to the end of the clause** *ich habe gesagt*

Chapter 15, p. 117

the Präteritum — the simple past in writing and high-frequency**speech** *ich sagte*

Chapter 15, p. 117

the seasons — native Germanic, unlike the Latin months *die**Jahreszeiten*

explicit focus: etymology; Chapter 9, p. 93

The simple past's regional retreat

etymology topic; Chapter 15, p. 117

the — the one plural article German uses for every gender *die**(plural)*

explicit focus: pronunciation, grammar; Chapter 1, p. 1

The Two Past Tenses

chapter topic; Chapter 15, p. 117

the weekdays (Monday–Friday) — Germanic gods, twins of the**English days** *Montag, Dienstag, Mittwoch, Donnerstag, Freitag*

explicit focus: pronunciation; Chapter 7, p. 85

the weekend (Saturday, Sunday) — the Sabbath and the**Sun** *Samstag, Sonntag*

explicit focus: etymology; Chapter 7, p. 85

they are, and the polite you are — one form, and the capital**letter is the only difference** *sie sind / Sie sind*

explicit focus: grammar; Chapter 16, p. 121

Three Verbs Under One Roof

chapter topic; Chapter 17, p. 133

**tired — the first adjective that says something about a person,
and it needs no ending here** *müde*

explicit focus: pronunciation; Chapter 16, p. 121

**to ask — a weak verb whose vowel stays put, and whose closest
English relatives came in from Latin as pray and**

precarious *fragen*

explicit focus: pronunciation, grammar, etymology, usage and culture; Chapter 27, p. 185

to be called / to be named *heißen*

explicit focus: pronunciation, etymology; Chapter 2, p. 19

to be — the partner of haben, and the most irregular verb

German has *sein*

explicit focus: pronunciation; Chapter 16, p. 121

**to become — the change-of-state half of the rule, in one
word** *werden*

explicit focus: pronunciation, etymology; Chapter 18, p. 143

**to close — the second verb in these chapters that German kept
and English lost, and the one that locked up Schloss, Schlüssel
and Schluss** *schließen*

explicit focus: pronunciation, etymology; Chapter 29, p. 205

**to come — English come with one consonant shifted, and the
second verb of the sein family** *kommen*

explicit focus: pronunciation, etymology; Chapter 18, p. 143

to go — and the verb German uses for “how are you?” *gehen*

explicit focus: pronunciation, etymology; Chapter 3, p. 31

**to go, and to walk — because German has no separate word for
walking, and English’s walk turns out to be a word about**

cloth *gehen*

explicit focus: pronunciation, etymology, usage and culture; Chapter 29, p. 205

To Have, and How Old You Are

chapter topic; Chapter 14, p. 113

**to have — identical to Latin habēre in sound and sense, and
unrelated to it** *haben*

Chapter 14, p. 113

**to hear — the same verb as English hear, and the closing of a
chapter of four things you do without going anywhere** *hören*

explicit focus: pronunciation, grammar, etymology, usage and culture; Chapter 28, p. 195

**to help — the same word as English help, separated by one
sound law, and still strong in German the way English’s help**

once was *helfen*

explicit focus: pronunciation, etymology, usage and culture; Chapter 27, p. 185

to learn (a third weak verb — the pattern is yours) *lernen*

explicit focus: pronunciation, grammar, etymology; Chapter 5, p. 75

to like and to love — plus gern, the adverb that lets any verb say “I like doing this” and has no English shape at all *mögen, lieben*

explicit focus: grammar, etymology; Chapter 27, p. 185

to live / to dwell (your first regular “weak” verb) *wohnen*

explicit focus: pronunciation, grammar, etymology; Chapter 5, p. 75

to make / to do (a second weak verb — same endings) *machen*

explicit focus: pronunciation, grammar, etymology; Chapter 5, p. 75

to me, for me — the form German uses for the person a thing happens to *mir*

explicit focus: etymology; Chapter 3, p. 31

to open — built on offen, which is English open, which is really the word up; and the doorway into German’s separable verbs *öffnen*

explicit focus: pronunciation, grammar, etymology; Chapter 29, p. 205

to read — a verb that first meant “to gather”, and the first one in this book whose vowel changes in the du and er forms *lesen*

explicit focus: pronunciation, grammar, etymology; Chapter 26, p. 177

to run — and to walk, because German draws the line in a different place from English, with rennen at the fast end *laufen*

explicit focus: pronunciation, etymology, usage and culture; Chapter 29, p. 205

to see — a straight cognate of English see *sehen*

explicit focus: pronunciation, etymology; Chapter 4, p. 53

to sit — the same inherited word as English sit, respelt by the other branch of the shift that separated helfen from help *sitzen*

explicit focus: pronunciation, grammar, etymology; Chapter 28, p. 195

to sleep — the same word as English sleep under two coats of German paint, and a second way for a strong verb to

break *schlafen*

explicit focus: pronunciation, grammar, etymology; Chapter 28, p. 195

to stand — the verb hiding inside verstehen, and the one place German keeps a letter English put in the wrong tense *stehen*

explicit focus: pronunciation, etymology, usage and culture; Chapter 28, p. 195

to stay — a verb that takes sein while meaning the exact opposite of change *bleiben*

explicit focus: pronunciation, etymology; Chapter 18, p. 143

to take — the verb English lost, though it left numb and nimble behind as fossils *nehmen*

explicit focus: pronunciation, grammar, etymology, usage and culture; Chapter 27, p. 185

to think — the verb you already met hiding inside danke, and the same inherited word as English think *denken*

explicit focus: pronunciation, grammar, etymology; Chapter 26, p. 177

to travel, to drive — motion with a vehicle under it, and English fare hiding inside *fahren*

explicit focus: pronunciation, etymology; Chapter 18, p. 143

to understand — literally “to stand around a thing”, the same picture English built independently in understand *verstehen*

explicit focus: pronunciation, etymology; Chapter 26, p. 177

to write — the one verb in this chapter German did not inherit but borrowed, from Latin *scribere* *schreiben*

explicit focus: pronunciation, grammar, etymology; Chapter 26, p. 177

to you, formally — the capitalised to-whom that goes with

Sie *Ihnen*

explicit focus: etymology; Chapter 3, p. 31

to you — the informal partner of mir *dir*

explicit focus: etymology; Chapter 3, p. 31

tomorrow — the second job of the Morgen you already

know *morgen*

explicit focus: grammar, etymology; Chapter 4, p. 53

U

until, up to — the preposition every soft German goodbye is

built from *bis*

explicit focus: grammar; Chapter 4, p. 53

V

Verbs of the Mind

chapter topic; Chapter 26, p. 177

very — the intensifier that turns gut into a real answer *sehr*

explicit focus: etymology; Chapter 3, p. 31

W

water and wine — one native Germanic, one ancient Latin

loan *das Wasser, der Wein*

Chapter 11, p. 101

we are — the plural form, and the first one that looks like the infinitive *wir sind*

explicit focus: pronunciation; Chapter 16, p. 121

we were — the plural past, and the last form of sein you

need *wir waren*

explicit focus: etymology; Chapter 17, p. 133

Weather

chapter topic; Chapter 23, p. 171

weather — a NATIVE Germanic word, unlike Romance’s shared Latin *tempus* family; *Wetter* is the SAME word as English “weather,” and *regnet* is the SAME word as English “rain” *das Wetter, es regnet*

explicit focus: grammar, etymology; Chapter 23, p. 171

what’s your name? (literally “how are you called?”) *wie heißen Sie?*

explicit focus: grammar; Chapter 2, p. 19

Why “to be” is the messiest word in every language

grammar topic; explicit focus: grammar, usage and culture; Chapter 17, p. 133

Wie geht es Ihnen? — the same question, at a distance

grammar topic; explicit focus: grammar; Chapter 3, p. 31

Y

yes *ja*

explicit focus: grammar, etymology; Chapter 20, p. 163

Yes and No

chapter topic; Chapter 20, p. 163

you are — bin plus the -st ending you already know, and the one place *sein* behaves *du bist*

explicit focus: pronunciation; Chapter 16, p. 121

you are, to more than one person — the form English lost when it dropped its plural *you* *ihr seid*

explicit focus: pronunciation; Chapter 16, p. 121

you (familiar / formal) *du / Sie*

explicit focus: pronunciation, grammar, etymology; Chapter 2, p. 19

you were — the familiar -st ending again, now on the past stem *du warst*

explicit focus: pronunciation; Chapter 17, p. 133

Other

ß — the letter that is two *s*’s in a coat

script and writing topic; explicit focus: writing, grammar, usage and culture; Chapter 4, p. 53
