Preface

This book teaches Marathi one word at a time, and it teaches each word by taking it apart. It is written for someone starting from zero — who may not read a single Devanagari letter — so the script is taught *inside the word lessons themselves*: each word introduces exactly the letters it needs, so you learn to read नमस्कार *and* learn that it means “greetings” in the same few minutes. (A reader who already reads Devanagari simply skims the letter notes — “the letters in this word” in most chapters, “sounds you’ll need” in Chapter 7.)

Marathi is written in Devanagari, the script of Hindi and Sanskrit — but it is its own **Indo-Aryan** language, the tongue of Maharashtra, and one shaped by long contact with the Dravidian south. So the book keeps two contrasts in view: Marathi’s Sanskrit inheritance (shared with Hindi), and the ways it goes its own way — an extra letter ऌ, *three* grammatical genders where Hindi kept two, and gender marked on the *verb*. Roots are traced to Sanskrit and, where they reach, to the wider Indo-European family that also gave English its words — every form supplied in full, so no prior knowledge of any other language is assumed.

How to use this book

Every numbered section is one word, or one small phrase, and takes a few minutes — the length of a queue, an errand, or the walk to the bus. Read them in order the first time through: each section stands on the ones before it, and nothing is used before it has been taught. After that the book becomes reference, and you can open it anywhere.

Say the Marathi out loud wherever you can. The prompts under *Your turn* are written to be spoken, and saying a word is most of what makes it stay. The questions under *Before you move on* carry their own answers in brackets: cover them, answer from memory, then look.

Nothing here is gated behind the alphabet. Each lesson introduces exactly the letters and sounds its own word needs, so you are reading real words from the first page rather than drilling a chart. The whole script is gathered in a reference at the back of the book — somewhere to look things up when you are curious, never a chapter to sit through first.

Devanagari for Marathi (reference)	71

Chapter 1

Greetings

The Marathi greetings — and, taught through them, how to read the Devanagari script and what makes Marathi its own language, not a dialect of Hindi. Each lesson introduces the letters its word needs.

1.1 नमस्कार (*namaskār*) — “greetings”

The letters in this word

(If you already read Devanagari, skim this.) Devanagari runs **left to right**, and every consonant carries a built-in “a.” न na, म ma, का kā, र ra. The stroke under स् (a *halant*) removes its vowel, so the bare *s* leans onto the next as a conjunct: स् + का → स्का. Read न·म·स्·का·र → *namaskār*.

The word, taken apart — its roots and family

नमस्कार (*namaskār*) = नमः (*namaḥ*, “a bow”) + कार (*kāra*, “the making of”), from Sanskrit — literally “the making of a bow.” It is the *same* word Kannada and Telugu borrowed, and close kin to Hindi’s *na-maskār*. But note: where Hindi leans on *namaste*, Marathi’s everyday, all-purpose greeting is **namaskār** — one of many small ways the two Devanagari languages differ.

Why it’s said this way

Said with the palms pressed together, respectful and neutral — it serves as both hello and goodbye, morning to night, to almost anyone. Warmer and more casual is a simple *kāy mhṇtā?* (“what do you say?,” i.e. “how’s

it going?”), for friends.

1.2 धन्यवाद (*dhanyavād*) — “thank you”

The letters in this word

New: ध *dha* (a breathy *d*), य *ya*, वा *vā*, द *da*, and the conjunct न्य (*na + ya*). Read ध·न्य·वा·द → *dhanyavād*.

The word, taken apart — its roots and family

धन्यवाद (*dhanyavād*) = Sanskrit *dhanya* (“worthy”) + *vāda* (“a saying”) — “an utterance of ‘[you are] worthy.’” The same Sanskrit word behind Hindi *dhanyavād*, Kannada *dhanyavāda*, Telugu *dhanyavādamulu*. Warmer, more spoken Marathi often says आभारी आहे (*ābhārī āhe*, “[I] am grateful”), on the root *ābhār*, “gratitude.”

1.3 हो (*ho*) — “yes”

The letters in this word

ह (*ha*) + the *o*-mātrā ो → हो (*ho*).

The word, taken apart — its roots and family

हो (*ho*, “yes”) is the plain affirmative — distinct from Hindi’s *hāmī*. Marathi builds its own everyday words on shared Indo-Aryan roots. The polite, fuller “yes” is *ho, baṛī āhe* (“yes, it’s fine”).

1.4 नाही (*nāhī*) — “no”

The letters in this word

ना (*nā*) + ही (*hī*) → *nāhī*.

The word, taken apart — its roots and family

नाही (*nāhī*, “no / is not”) sits on the ancient negative *na-* — the *same* Proto-Indo-European **ne* behind English **no**, **not**, **none**, Latin *non*, and Hindi *nahīn*. It doubles as “there isn’t”: Marathi, like Hindi, denies with this one word.

1.5 बरं (*barṇ*) — “okay, fine”

The letters in this word

ब (*ba*) + रं (*ra* with the *anusvāra* dot ँ, a light nasal) → *barṇ*. That dot on top nasalises the vowel.

The word, taken apart — its roots and family

बरं (*barṇ*, “okay, fine, good, all right”) is the verbal shrug of Marathi — a soft “sure, fine,” the oil of everyday talk (its neutral form is *barē*). It is a genuinely Marathi word, not a Sanskrit loan.

1.6 येतो / येते (*yeto* / *yete*) — “I’ll take my leave”

The letters in this word

ये (*ye*) + तो (*to*) → *yeto*; ये + ते (*te*) → *yete*.

The word, taken apart — its roots and family

Marathi, like the Dravidian languages to its south, will not say a bare “I’m leaving.” The everyday goodbye is येतो (*yeto*) — literally “I **come** [again],” a promise of return, never a final departure. (Fuller: *yeto*, *namaskār*.)

Grammar Lens

Marathi verbs carry gender. *yeto* is what a *man* says; a *woman* says येते (*yete*). The verb itself changes with the speaker’s gender — something Hindi does only in the past tense, but Marathi does in the present too. (And Marathi keeps *three* genders — masculine, feminine, and neuter — where Hindi kept only two.) You’ll meet this again at

every verb.

1.7 Recap

Marathi		Meaning
नमस्कार	<i>namaskār</i>	hello / goodbye
धन्यवाद	<i>dhanyavād</i>	thank you
हो	<i>ho</i>	yes
नाही	<i>nāhī</i>	no
बरं	<i>barṇ</i>	okay / fine
येतो / येते	<i>yeto / yete</i>	“I’ll be going” (m./f.)

Marathi is written in Devanagari like Hindi, but it is its own Indo-Aryan language: it prefers *namaskār*, keeps **three** genders, marks **gender on the verb** (*yeto/yete*), and — as the reference page shows — has an extra letter, ऌ (ḷa), that Hindi lacks. Next chapter: introducing yourself — *mājhe nāv...* (“my name...”) — and Marathi’s *tū / tumhī* (familiar / respectful “you”).

Chapter 2

Introducing Yourself

Now a first real exchange — giving your name, asking for someone else’s, and saying you are glad to meet them:

माझं नाव मीरा आहे. (*mājhṃ nāv Mīra āhe* — “My name is Mira.”)
तुमचं नाव काय आहे? (*tumchṃ nāv kāy āhe* — “What is your name?”)

2.1 नाव (*nāv*) — “name,” a word older than Europe

The letters in this word

ना (*nā*) + व (*va*) → नाव *nāv*.

The word, taken apart — its roots and family

नाव (*nāv*) ← Sanskrit नामन् (*nāman*, “name”). Watch the small Marathi shift: the Sanskrit *-m-* softened to *-v-*, so *nām* became **nāv** (Hindi kept the *m*: *nām*). That *nāman* goes back to PIE **h₃nomn*, — the same root as English **name** and **noun**, Latin *nōmen*, Greek *onoma*. A cousin from before either language existed.

Grammar Lens

A Marathi habit: soft consonants. *m*→*v* here is one of many softening shifts that distinguish Marathi from Hindi. Spot the shift and a Sanskrit word reads straight into Marathi.

2.2 माझं (*mājhṇ*) — “my,” and gender again

The letters in this word

मा (*mā*) + झं (*jha* with the *anusvāra* ँ) → *mājhṇ*.

The word, taken apart — its roots and family

माझं (*mājhṇ*, “my”) sits on the first-person root *ma-* — the same root behind English **me**, **my**, **mine**, Latin *meus*, Hindi *merā*.

Grammar Lens

“My” agrees in three genders. माझा (*mājhā*, m.) / माझी (*mājhī*, f.) / माझं (*mājhṇ*, n.). The noun *nāv* (“name”) is **neuter**, so “my name” is *mājhṇ nāv*. You met this gender idea already in the goodbye *yeto/yete*; it runs through the whole language.

2.3 आहे (*āhe*) — “is,” and it comes last

The letters in this word

आ (*ā*, the standalone long-*ā* vowel) + हे (*he*) → आहे *āhe*.

The word, taken apart — its roots and family

आहे (*āhe*, “is”) descends from Sanskrit अस्ति (*ásti*), on the root $\sqrt{\text{as}}$ (“to be”). That $\sqrt{\text{as}}$ / PIE **h₁es-* is the ancestor of Latin *est*, German *ist*, and English **is** itself — the oldest verb in the family, worn to *āhe* in Marathi.

Grammar Lens

The verb goes last. Marathi is subject–object–verb: “my name Mira *is*.” *āhe* sits at the end, and it changes with the subject — *mī āhe* (I am), *tū āhes* (you are), *tumhī āhāt* (you are, resp.), which you will use in the next chapter.

2.4 माझं नाव ...आहे — “my name is...”

माझं (my) + नाव (name) + आहे (is) = “my name is...” *Mājhm̐ nāv Arun āhe*. The *mājhm̐* is neuter to agree with *nāv*; the verb comes last.

2.5 तू / तुम्ही (*tū* / *tumhī*) — “you,” familiar and respectful

The word, taken apart — its roots and family

तू (*tū*, familiar “you”) ← Sanskrit त्वम् (*tvam*), PIE **tū* — the root of English archaic **thou**, Latin *tū*, French *tu*, Hindi *tū*. तुम्ही (*tumhī*, respectful) is grammatically **plural** — honouring one person as many, exactly like French *vous*; it takes the plural copula *āhāt*.

Grammar Lens

A choice of respect, every time. *tū* for a friend or child; *tumhī* for an elder, a stranger, anyone you show courtesy to. Marathi makes you pick with each address.

2.6 काय (*kāy*) — “what”

The word, taken apart — its roots and family

काय (*kāy*, “what”) grows from the interrogative stem *ka-*, PIE **k^wo-* — the root behind English **wh-** words and Latin *qu-*. Marathi keeps the *k-* plainly across its questions: *kāy* (what), *koṇ* (who), *kuṭhe* (where), *kā* (why), *kaśm̐* (how). Hear that opening *k-* and a question is coming.

2.7 तुमचं नाव काय आहे? — “what’s your name?”

तुमचं (*tumchm̐*, “your,” neuter to match *nāv*) + नाव + काय (what) + आहे (is) = “your name what is?”, verb last. The “your” set mirrors the “my” set: *mājhm̐* (my) / *tumchm̐* (your, resp.) / *tujhm̐* (your, familiar) — all neuter here before *nāv*. To a friend: तुझं नाव काय आहे? (*tujhm̐ nāv kāy āhe?*).

2.8 भेटून आनंद झाला (*bheṭūn ānand jhālā*) — “a joy to meet you”

The word, taken apart — its roots and family

The warm close is भेटून आनंद झाला — literally “having met [you], joy happened.” आनंद (*ānand*, “joy, bliss”) is **Sanskrit** — *ā-* (“fully”) + *nand* (“to rejoice”) — the *ānanda* of *sat-cit-ānanda* and a common given name. And *bheṭūn* is built on भेटणे (*bheṭṇe*, “to meet”), the verb behind Chapter 4’s *punhā bheṭū*.

2.9 The whole exchange

Marathi	English
माझं नाव मीरा आहे.	My name is Mira.
तुमचं नाव काय आहे?	What’s your name?
माझं नाव अरुण आहे.	My name is Arun.
भेटून आनंद झाला.	Pleased to meet you.

Every atom traced: *nāv* ($\rightarrow$ *name*), *mājhm̐* ($\rightarrow$ *my*), *kāy* ($\rightarrow$ *what*), *tū* ($\rightarrow$ *thou*). And two Marathi distinctives came back: three genders (on *mājhm̐*) and the verb *āhe* going **last**. Next chapter: *tumhā kase āhāt?* (“how are you?”).

Chapter 3

How Are You?

The everyday exchange after hello:

तुम्ही कसे आहात? (*tumhī kase āhāt* — “How are you?”)
मी बरा आहे, धन्यवाद. (*mī barā āhe, dhanyavād* — “I’m well, thank you.”)

3.1 कसा / कशी / कसं (*kasā / kaśī / kaṣṇ*) — “how”

The word, taken apart — its roots and family

कसा (*kasā*, “how”) is another *k*- question, from PIE **k^wo-* — the root behind English **how** (a *wh*- word that lost its *w*) and Latin *quo-modo* (“in what way,” → Spanish *cómo*).

Grammar Lens

“How” agrees with whom you ask. कसा (*kasā*, to a man) / कशी (*kaśī*, to a woman) / कसं (*kaṣṇ*, neuter). So “how are you?” shifts shape with the person addressed.

3.2 तुम्ही कसे आहात? — “how are you?”

तुम्ही (*tumhī*, resp. “you”) + कसे (*kase*, “how,” plural-agreeing) + आहात (*āhāt*, “are,” resp.) = “you how are?”, verb last. Because *tumhī* is grammatically plural, “how” appears as *kase* and the copula as *āhāt*. To a male friend: तू कसा आहेस? (*tū kasā āhes?*); to a female friend: तू कशी आहेस? (*tū kaśī āhes?*).

3.3 मी (*mī*) — “I”

The word, taken apart — its roots and family

मी (*mī*, “I”) descends from Sanskrit अहम् (*aham*), worn down to *mī*. That *aham* is PIE **h₁eg(H)om* — the ancestor of Latin **ego** and English **I**. Note its family tie to last chapter’s *mājhm* (“my”): the same first-person *m*- thread, as English pairs *I* with *me/my*.

Grammar Lens

“I am” is *mī āhe*. And “I’m fine” reaches back to Chapter 1’s *barṃ* in its gendered form: *mī barā āhe* (a man) / *mī barī āhe* (a woman).

3.4 मी बरा आहे — “I’m well, thank you”

मी (I) + बरा (*barā*, “well”) + आहे (*am*) = “I am well.” Chapter 1’s *barṃ* was the bare **neuter** “okay”; describing a person it takes their gender: *barā* (m.) / *barī* (f.). Add thanks: *mī barā āhe*, *dhanyavād*.

Grammar Lens

The copula changes with the subject. *mī āhe* (I am), *tū āhes* (you are), *tumhī āhāt* (you are, resp.) — one verb, reshaped for each person. Marathi marks *who* on the verb itself.

3.5 काही हरकत नाही (*kāhī harkat nāhī*) — “no problem”

The word, taken apart — its roots and family

काही (*kāhī*, “any”) + हरकत (*harkat*, “objection”) + नाही (*nāhī*, “not”) = “[there is] no objection at all” — Marathi’s easy “you’re welcome / no problem.” Two histories meet: *nāhī* rides PIE **ne* (English **no**, **not**), while *harkat* is a **Perso-Arabic** loan (Arabic *ḥarakah*) — one of the many Persian and Arabic words Marathi absorbed under the Decan sultanates. An Indo-European negative wrapped around an Arabic noun.

3.6 The whole exchange

Marathi	English
तुम्ही कसे आहात?	How are you?
मी बरा आहे, धन्यवाद.	I'm well, thank you.
काही हरकत नाही.	No problem / you're welcome.

Roots banked: *kasā* (the *k*- questions, gender-agreeing), *mī* (*aham* → Latin *ego*, English *I*), *barā/barī* (now gendered), *harkat* (Arabic, the Deccan trade-and-court layer). Next chapter: the farewells — *punhā bhetū*.

Chapter 4

Farewells

Chapter 1 gave you the quick येतो (*yeto*, “I’ll come again”). Its explicit companion:

पुन्हा भेटू! (*punhā bhetū* — “We’ll meet again!”)

4.1 पुन्हा (*punhā*) — “again”

The word, taken apart — its roots and family

पुन्हा (*punhā*, “again, back”) is from Sanskrit पुनर् (*punar*, “again”), a cousin of Latin *re-* (“back/again”) and the *puna-* of *punarjanma* (“re-birth”). To say a thing *punhā* is to send it round once more.

4.2 भेटू (*bhetū*) — “(we’ll) meet”

The letters in this word

भे (*bhe*) + टू (*tū*, the retroflex ट *ṭa* with the long-*u*) → *bhetū*.

The word, taken apart — its roots and family

भेटू (*bhetū*) is a form of भेटणे (*bhetṇe*, “to meet”), a native Marathi verb (the stem *bhet-* also gives *bhet*, “a meeting”). As *bhetū* it means “let’s / we’ll meet” — the hopeful mood a goodbye wants.

Grammar Lens

“We” lives in the verb. *bheṭū* carries its own “we/let’s” in the *-ū* ending — no separate word for “we” needed. Unlike the present (*yeto/yete*), this future-wish form does *not* split by gender.

4.3 पुन्हा भेटू — “see you again”

पुन्हा (again) + भेटू (we’ll meet) = “we’ll meet again” — the explicit twin of Chapter 1’s *yeto*. Stack them for warmth: येतो, पुन्हा भेटू (*yeto, punhā bheṭū*). Neither word says “goodbye”; the parting is all return (Hindi *phir milenge*, Bengali *āshi*, Tamil *pōy varugirēṇ*).

4.4 उद्या भेटू (*udyā bheṭū*) — “see you tomorrow”**The word, taken apart — its roots and family**

उद्या (*udyā*, “tomorrow”) + भेटू (we’ll meet) = “we’ll meet tomorrow.” Unlike Hindi *kal* (which means *both* tomorrow and yesterday), Marathi keeps them apart: *udyā* (tomorrow) vs. काल (*kāl*, yesterday). The verb carries the future; the first word sets the day.

4.5 काळजी घ्या (*kāl̥jī ghyā*) — “take care”**The letters in this word**

काळजी carries ळ (*la*), the **retroflex “l”** Marathi keeps (Hindi dropped it): का+ळ+जी → *kāl̥jī*. Then घ्या (*ghyā*, “take,” resp.).

The word, taken apart — its roots and family

काळजी (*kāl̥jī*, “care, concern”) + घ्या (*ghyā*, “take”) = “take care.” Where *punhā bheṭū* looks to the next meeting, this looks after the person in between — “mind yourself until then.” The respectful घ्या (*ghyā*) matches *tumhā*; to a friend, काळजी घे (*kāl̥jī ghe*), matching *tū*.

4.6 The farewells

Marathi	English
येतो / येते.	I'll be going. (“come again”)
पुन्हा भेटू.	See you again.
उद्या भेटू.	See you tomorrow.
काळजी घ्या.	Take care.

Roots banked: *punhā* (*punar* “again”), *bhetṇe* (“to meet”; “we” in the ending), *udyā* (tomorrow, kept apart from *kāl* yesterday), *kāl̥jī* (the retroflex ळ). Every Marathi goodbye is a **return** or a caring wish — never a bare “farewell.” Next chapter: the first real verbs — *mī marāṭhī bolto*.

Chapter 5

The First Verbs

Until now, verbs of *being* and *meeting*. Now verbs that *act* — and sentences that move:

मी मराठी बोलतो. (*mī marāṭhī bolto* — “I speak Marathi.”)

5.1 बोलणे (*bolṇe*) — “to speak,” your first full verb

The letters in this word

बो (*bo*) + ल (*la*) + णे (*ṇe*, the **retroflex** ण *ṇa*) → *bolṇe*.

The word, taken apart — its roots and family

बोलणे (*bolṇe*, “to speak”) is a native Indo-Aryan verb on the stem *bol-* (the same *bol-* as Hindi *bolnā*, Punjabi *bolṇā*). Its ending **-णे** (*-ṇe*) is Marathi’s **infinitive**: *bol-ṇe* “to speak,” *bheṭ-ṇe* “to meet,” *ye-ṇe* “to come.” Strip *-ṇe* for the stem (*bol-*).

Grammar Lens

Stem + gendered present ending. *mī bolto* (a man speaks) / *mī bolte* (a woman speaks) — the present tense splits by the speaker’s gender, as *yeto/yete* did. And it needs **no** separate “am”: the one word does the work, at the end of the sentence.

5.2 मी मराठी बोलतो — “I speak Marathi”

मी (I) + मराठी (*marāṭhī*, the object) + बोलतो (speak) — “I Marathi speak,”

verb last (a woman: *mī marāṭhī bolte*). The name मराठी is “[the language] of महाराष्ट्र (*Mahārāṣṭra*)” — the “great realm,” *mahā* (“great,” cousin of Latin *magnus*, English *magnitude*) + *rāṣṭra* (“nation”). People *Marāṭhā*, land *Mahārāṣṭra*, tongue *marāṭhī* — one root.

5.3 राहणे (*rāhṇe*) — “to live, to stay”

The word, taken apart — its roots and family

राहणे (*rāhṇe*, “to live, remain”) is from Sanskrit *rah-* (“to remain,” the same root as Hindi *rahnā*): *mī puṇyāt rāhto* (“I live in Pune”).

Grammar Lens

“In” comes after the noun. पुण्यात (*puṇyāt*) = पुणे (*Puṇe*, the city) + *-āt* (“in”), glued to the noun’s *end*. Marathi uses **postpositions**, verb last.

5.4 काम करणे (*kām karṇe*) — “to work”

The word, taken apart — its roots and family

करणे (*karṇe*, “to do, make”) is from Sanskrit $\sqrt{kr}$ (“to do”), PIE $*k^w er-$ — the very root inside Chapter 1’s नमस्कार (*namaskār* = “the *making* of a bow”) and कर्म (*karma*, “a thing *done*”). And काम (*kām*, “work”) is itself worn down from that *karma*. Marathi builds compounds as **noun** + करणे: काम करणे (*kām karṇe*, “work-do” = “to work”), *madat karṇe* (“to help”). Present, gendered: *mī kām karto/karte* (“I work”).

5.5 Sentences about yourself

Marathi	English
मी मराठी बोलतो / बोलते.	I speak Marathi.
मी पुण्यात राहतो / राहते.	I live in Pune.
मी काम करतो / करते.	I work.

One engine: an infinitive in *-ṇe*; a present of stem + a **gendered** ending (*-to m.* / *-te f.*) that folds in the “am”; the verb last; “in” on the noun’s tail.

Roots banked: *bolṇe* (native), *marāṭhī* ($\leftarrow$ *Mahārāṣṭra* “great realm”), *rāhṇe* (*rah-* “remain”), *karṇe* ($\sqrt{kṛ}$ — root of *namaskār*, *karma*; *kām* $\leftarrow$ *karma*). From here, Marathi only opens further.

Chapter 6

Numbers One to Five

By the end of this chapter: I can count from one to five in Marathi, say चार as tsār rather than chār, and tell which of Marathi’s differences from Hindi is an innovation and which is Hindi holding on to something older.

Account for all three tells: दोन’s final n copied from the rhyme of तिन्नि/donni, पाच dropping the nasal Hindi पाँच still writes, and चार spelled as everywhere else but pronounced with a ts.

6.1 एक, दोन, तीन, चार, पाच — one to five

Marathi and Hindi both use Devanagari and both descend from Sanskrit, so their numbers look almost identical. **Almost** is where the interest is.

You’ll want to know: the five

	Marathi	said
1	एक	ek
2	दोन	don
3	तीन	tīn
4	चार	chār — but see below
5	पाच	pāch

What you’ve built: three Marathi tells

Set them against Hindi. Two differences are visible and one is audible:

number	Hindi	Marathi
2	दो <i>do</i>	दोन <i>don</i> : final <i>n</i>
5	पाँच <i>pāñch</i>	पाच <i>pāch</i> : no nasal mark
4	चार <i>chār</i>	चार <i>tsār</i> : same spelling, different sound

Do not explain all three histories yet. First make the five forms automatic; the next lesson earns the deeper comparison.

Your turn

Say these aloud:

- “ek, don, tīn, tsār, pāch”
- the visible tells — *don* has *n*; *pāch* has no nasal mark
- the audible tell — written *chār*, Marathi *tsār*

Before you move on

Count to five in Marathi. (*Ek, don, tīn, tsār, pāch.*) Where does Marathi add a letter compared with Hindi? (दोन, *don.*) Which form drops a nasal mark? (पाच, *pāch.*) What differs in चार without differing in spelling? (Marathi’s च is nearer **ts** before *ā*.) Next: explain where those differences came from.

6.2 Why Marathi *two* rhymes with *three*

Count once: *ek, don, tīn, tsār, pāch.* Which two words end in *n*? (*Don* and *tīn.*)

The word, taken apart — its roots and family

The tempting guess is that Marathi दोन *don* kept something Hindi दो *do* lost. It did not.

Sanskrit’s neuter word for three, त्रीणि *trīṇi*, became Prakrit **tiṇṇi**. In *three*, the **ṇ** genuinely belongs to the word. The doubled consonant is a

Prakrit trade for the lost *r*.

The word for two was then reshaped to match its neighbour: Prakrit **donṇi** copied the shape of **tiṇṇi**. Marathi *don*'s final *n* is therefore an **innovation**, a rhyme borrowed from the number next door. Hindi *do* simply never took it.

English numbers did this too: *four* acquired its initial *f*- by analogy with *five*. Familiar sequences pull neighbouring words toward one another.

What you've built: पाच and the nasal Hindi kept

Marathi पाच *pāch* and Hindi पाँच *pāñich* tell the opposite story. Hindi's chandrabindu ँ records the nasal of Sanskrit **pañca**; Marathi's spelling drops it.

So neither language is simply "older." Marathi innovated in *don*, while Hindi retained an older feature in *pāñich*. Comparing both descendants reveals the history that either one alone could hide.

The letters in this word

Both write चार, but Marathi pronounces च before *ā* nearer **ts**: *tsār*. The letters stayed aligned while the sound moved.

Your turn

Say these aloud:

- the borrowed rhyme — *tiṇṇi ... donṇi*
- innovation — Marathi *don*'s final *n*
- retention — Hindi *pāñich*'s nasal
- same spelling, shifted sound — *chār* / *tsār*

Before you move on

Did Marathi *don* preserve an ancient ending? (No: *two* copied *three*.) Which language retains Sanskrit *pañca*'s nasal in writing? (Hindi.) Why can neither daughter be called simply older? (Each changed or retained a different feature.) What does Marathi change without respelling चार? (*Ch* shifts toward *ts* before *ā*.)

Chapter 7

The Core Verbs

By the end of this chapter: I can use six everyday Marathi verbs, pick the present-tense ending that agrees with my subject’s gender, end every sentence on the verb, and say that I know something the way Marathi says it — with the knower in the dative and आहे closing the line.

Say मला माहीत आहे and मला मराठी येते unprompted: the knower in the dative, the verb agreeing with its own subject rather than with the speaker, and आहे closing the sentence — the whole chapter’s machinery in two lines.

7.1 असणे (asṇe) — “to be,” and the word your sentence ends on

You have already said it: *mājhami nāv ... āhe*. Now meet the verb that form belongs to, and notice where Marathi insists on putting it.

You’ll want to know: असणे and its present आहे

असणे — *asṇe* — to be

The ending -णे (-ṇe) is the Marathi infinitive, the same ending as *bolṇe* “to speak.” Its present tense is short, irregular, and already yours: आहे (*āhe*) — “am, is, are.”

who	Marathi	said
मी (I)	आहे	<i>āhe</i>
तू (you, familiar)	आहेस	<i>āhes</i>
तुम्ही (you, respectful)	आहात	<i>āhāt</i>

The letters in this word

अ is the bare vowel *a*; स is *sa*; णे is the retroflex ण *ṇa* carrying the *-e* stroke — *a-sa-ṇe*. आ is that first letter with an upright stroke added, the long *ā*. हे is ह *ha* with the same *-e* stroke: *ā-he*.

The word, taken apart — its roots and family

Sanskrit’s word for “is” was अस्ति *ásti*, sitting on the stem *as-*, and that stem goes back to the Indo-European root **h₁es-*. It surfaces almost everywhere the family reaches: Latin *est*, Greek *estí*, German *ist*, and English **is**. *Asṇe* is built straight on it.

आहे itself is the contested piece. Some trace it to *ásti* directly; others route it through a Middle Indo-Aryan verb *acchai* “stays, remains.” The family is not in doubt, the exact line of descent is — so treat it as an open question rather than a settled fact.

Grammar Lens: the sentence ends on आहे

English slots *is* into the middle of a sentence: “My name **is** Sara.” Marathi holds it back to the very end:

माझं नाव सारा आहे — *mājhami nāv Sārā āhe* — piece by piece, “my name Sara is.”

That is the rule for every Marathi verb, and *āhe* is where it becomes unmissable. Whatever else the sentence carries, the verb closes it.

Your turn

Say these aloud:

- “asṇe” — to be — then its present, “āhe”
- the three persons — “mī āhe ... tū āhes ... tumhī āhāt”
- your own name in Marathi order — “mājhami nāv ... āhe”

Before you move on

What is the infinitive behind *āhe*? (असणे, *asṇe*.) Where does a Marathi verb stand? (**Last** — the sentence closes on it.) Which everyday English word is *ásti*’s own cousin? (**Is**.) Next: a verb that changes shape according to who is speaking.

7.2 जाणे (jāṇe) — “to go,” and a present tense that gives you away

Say “my name is ...” once more, and hear where *āhe* lands. Every verb from here obeys that same rule. This one adds a second rule English has no use for.

You’ll want to know: जाणे

जाणे — *jāṇe* — to go

Strip the infinitive ending -णे and the stem is जा- *jā-*. On that stem Marathi builds the everyday present: जातो (*jāto*) and जाते (*jāte*).

Both mean “I go.” Neither is more correct than the other. Which one you may say is decided by something the English sentence never mentions.

The letters in this word

ज is *ja*, and the upright stroke after it is the long *ā* — together जा *jā*. णे you met last lesson: retroflex ण with the -*e* stroke. Two syllables, *jā-ṇe*, with the tongue curled back for that second one.

Grammar Lens: the ending declares who is speaking

English “I go” hides the speaker completely — a man and a woman say the same two words. Marathi will not let you:

speaking of	Marathi	said
a man, of himself	मी जातो	<i>mī jāto</i>
a woman, of herself	मी जाते	<i>mī jāte</i>
a man, “he goes”	तो जातो	<i>to jāto</i>
a woman, “she goes”	ती जाते	<i>tī jāte</i>

The -तो / -ते swap is the whole mechanism, and it runs through every

verb: *bolto* / *bolte*, *yeto* / *yete*. Hindi marks gender on its verbs too, but Marathi makes it unavoidable in the plainest sentence a beginner can build. From your first “I go,” you are choosing. Notice also what is missing: no separate word for “am.” The ending carries the action, the person, and the gender at once.

Your turn

Say these aloud:

- “jāṇe” — to go — then the stem, “jā-”
- “I go” in your own gender — “mī jāto” or “mī jāte”
- the pair — “to jāto ... tī jāte”

Before you move on

What is the stem inside *jāṇe*? (जा-, jā-.) Which two endings split the present, and by what? (-तो / -ते, by the gender of the one the verb is about.) Can a Marathi speaker say “I go” without revealing it? (**No** — the choice is forced.) Next: the same ancient root, pointed the other way.

7.3 येणे (yeṇe) — “to come,” the other half of “to go”

Say “I go” in your own gender: *mī jāto* or *mī jāte*. Hold that shape. The next verb is closer to it than it sounds.

You’ll want to know: येणे

येणे — *yeṇe* — **to come**

Same infinitive ending, same machinery: stem ये- *ye-*, present येतो (*yeto*) and येते (*yete*), split by gender exactly as *jāto* / *jāte* was.

You met *yeto* in Chapter 1 as a farewell — Marathi takes its leave by saying “I come,” promising the return rather than announcing the departure.

The letters in this word

य is *ya*, a soft English *y* as in *yes*. Add the *-e* stroke above and you have ये *ye* — the same stroke you have been putting on णे and on हे in *āhe*. Two syllables: *ye-ṇe*.

The word, taken apart — its roots and family

Sanskrit had a verb of travelling, **या-**, whose present was याति *yāti* “goes, travels.” Middle Indo-Aryan turned that initial *y-* into a *j-*, giving Prakrit *jāi* — and that is Marathi जाणे.

Now put a prefix on it. Sanskrit आ- *ā-* means “toward, hither,” and आयाति *āyāti* is “travels toward here” — that is, **comes**. Worn down through the same centuries, *āyāti* is Marathi येणे.

So *going* and *coming* are not two verbs in this family. They are one verb of travelling, and the only difference is a prefix meaning “this way.” English keeps a faint echo of the same trick in *go* against *in-coming*, but it needs two separate roots to do what Sanskrit did with one.

Your turn

Say these aloud:

- “येणे” — to come — then the stem, “ye-”
- “I come” in your own gender — “mī yeto” or “mī yete”
- the derivation — “yāti ... āyāti ... येणे”

Before you move on

What is the stem of *yeṇe*? (ये-, *ye-*.) Which Sanskrit root do *jāṇe* and *yeṇe* share? (**या-**, to travel.) What single piece turns going into coming? (The prefix आ- *ā-*, “toward here.”) Next: an infinitive that is also a noun, and the gender Hindi does not have.

7.4 खाणे (khāṇe) — “to eat,” and Marathi’s third gender

Two infinitives so far: *jāṇe*, *yeṇe*. Say them. This third one is ordinary as a verb and quietly remarkable as a noun.

You'll want to know: खाणे

खाणे — *khāṇe* — to eat

Stem खा- *khā-*, present खातो (*khāto*) and खाते (*khāte*) on the gendered pattern you already have.

Its root is Sanskrit खादति *khādati*, “chews, eats” — a solidly Indo-Aryan word with no borrowing in its history. The *-d-* wore away on the road to Marathi; the long *ā* stayed.

The letters in this word

ख is *kha* — a *k* with a genuine puff of breath after it, the sound in English *kit* said hard, not the *k* of *skit*. Marathi treats that puff as a different letter, not an accent. Add the long-*ā* stroke and the familiar णे: *khā-ṇe*.

Grammar Lens: the infinitive is a neuter noun

खाणे also simply means “eating” — the thing, not the act of doing it. Every -णे infinitive works this way; खाणंपिणं (*khāṇaṁ-piṇaṁ*), “eating and drinking,” is how Marathi says food and drink.

And as a noun it carries a gender — **neuter**, the third one. Hindi has two genders, masculine and feminine. Marathi kept all three that Sanskrit had, so words agreeing with a noun come in three shapes:

gender	“good”	said
masculine	चांगला	<i>chāṅglā</i>
feminine	चांगली	<i>chāṅglī</i>
neuter	चांगलं	<i>chāṅglam</i>

So “eating is good” is खाणं चांगलं आहे — *khāṇaṁ chāṅglam āhe*, with the neuter ending twice over and the verb, as always, last.

Your turn

Say these aloud:

- “khāṇe” — to eat — then “I eat” in your own gender
- the three shapes — “chāṅglā ... chāṅglī ... chāṅglam”
- “eating is good” — “khāṇaṁ chāṅglam āhe”

Before you move on

What are the two things खाणे means? (**To eat**, and **eating** as a noun.) How many genders does Marathi have, and how many does Hindi have? (**Three** against **two** — Marathi kept Sanskrit’s neuter.) Which gender is an infinitive? (**Neuter**.) Next: a verb whose root you already own in a dozen English words.

7.5 पाहणे (pāhṇe) — “to see,” a root you already own

Say “I eat” in your own gender — *mī khāto* or *mī khāte*. The next verb runs on the same endings, and on a root you have been using in English all your life without knowing it.

You’ll want to know: पाहणे

पाहणे — *pāhṇe* — to see, to watch

Stem पाह- *pāh-*, present पाहतो (*pāhto*) and पाहते (*pāhte*). In everyday speech you will also hear बघणे (*baghṇe*) for the same job; *pāhṇe* is the one whose history repays digging.

The letters in this word

प is *pa* without the puff of breath that *kha* had. Add the upright stroke for long *ā*: पा *pā*. Then ह *ha*, and the णे you now know by heart. Three light syllables, *pā-ha-ṇe*, usually spoken as two: *pāh-ṇe*.

The word, taken apart — its roots and family

Sanskrit’s verb for seeing was पश्यति *paśyati*, on the root *paś-*, and Marathi’s *pāhṇe* descends from its prefixed form प्रपश्यति *prapaśyati*, “looks out at.”

Now the payoff. That *paś-* is the Indo-European root ***spek-**, “to observe.” Sanskrit dropped the *s-* and swapped the consonants around; Latin kept them in order as *speciō*, “I look.” From the Latin side English inherited an enormous family, every one of them a cousin of *pāhṇe*: **spectacle**, **inspect**, **respect**, **suspect**, **prospect**, **species**, **specimen**, **speculate**, **telescope**, and — through Italian — **spy**.

So a Marathi speaker asking you to *pāhṇe* something is asking you to *inspect* it, in the most literal ancestral sense the word has.

Your turn

Say these aloud:

- “pāhṇe” — to see — then “I see” in your own gender
- the derivation — “paśyati ... prapaśyati ... pāhṇe”
- four English cousins — “spectacle, inspect, species, spy”

Before you move on

What is the stem of *pāhṇe*? (पाह-, *pāh-*.) Which Sanskrit verb is it from? (पश्यति *paśyati*, in its prefixed form *prapaśyati*.) Name three English words from the same ancient root. (*Spectacle, inspect, species, spy* — any three.) Next: a verb Marathi mostly refuses to use, and what it says instead.

7.6 माहीत असणे (māhīt asṇe) — “to know,” which Marathi says sideways

Say “I go” and “I come” in your own gender — *jāto* or *jāte*, *yeto* or *yete*. Five verbs obeyed that pattern. This one refuses.

You’ll want to know: माहीत असणे and जाणणे

माहीत असणे — *māhīt asṇe* — **to know** (everyday)

जाणणे — *jāṇṇe* — **to know** (formal, literary)

Marathi has an inherited verb for knowing and barely uses it. Everyday speech says *māhīt asṇe*, “to be known,” built on *asṇe*.

The letters in this word

म is *ma*; with the long-*ā* stroke, मा. ही is ह *ha* with the long -*ī* stroke, which leans forward ahead of its letter. त is *ta*: *mā-hī-t*.

Grammar Lens: knowledge comes to you, you do not do it

मला माहीत आहे — *malā māhīt āhe* — “I know.”

Word by word: “**to me** known **is**.” *Malā* is “to me,” and the knower sits there, not in the subject slot. Nobody acts; a fact is simply in your possession, and *āhe* closes the line.

The same frame carries a language: मला मराठी येते — *malā marāṭhī yete* — “I know Marathi,” literally “to me Marathi comes.” *Yete* is feminine because the subject is मराठी, a feminine noun — not the speaker; a man says it too. The verb agrees with its subject, as always. Here the subject is not you.

The word, taken apart — its roots and family

माहीत is a **loan**: through Persian from Arabic *māhiyat*, “the particulars” — one of the administrative words the Deccan sultanates left in Marathi. जाणणे is pure inheritance: Sanskrit जानाति *jānāti*, root *jñā-*, from Indo-European ***gnō-** — the root of English **know**, Latin *nōscere* (*notice, recognize*) and Greek *gnōsis* (*diagnosis*). Marathi kept the cousin and gave the daily work to the loan.

Your turn

Say these aloud:

- “*malā māhīt āhe*” — then literally, “to me known is”
- “I know Marathi” — “*malā marāṭhī yete*”
- the inherited verb and its English cousin — “*jāṇṇe ... know*”

Before you move on

Where does Marathi put the knower? (**In the dative** — *malā*, “to me.”) Which verb finishes *malā māhīt āhe*, and where? (आहे, **last**.) Why *yete* in *malā marāṭhī yete*? (The subject is मराठी, feminine — agreeing with it, not the speaker.) Which know-verb was borrowed? (माहीत, through Persian.)

Chapter 8

The Mind and the Page

By the end of this chapter: I can say that I think, understand, read and write in Marathi, put the understander in the dative where Marathi puts it, and name what each of the four roots meant before it meant a mental act — turning, waking, speaking and scratching.

Say मी माझं नाव लिहितो, run the chapter's four verbs back with the four things their roots meant — *vichār karṇe* from a root meaning to turn, *samajṇe* from one meaning to wake, *vāchṇe* from one meaning to speak, *lihṇe* from one meaning to scratch — and pick out the one of the four that refuses मी and takes मला instead.

8.1 विचार करणे (*vichār karṇe*) — “to think,” which is a turning

Say “I see” in your own gender — *mī pāhto* or *mī pāhte* — and name one English word from that verb's root. (*Spectacle, inspect, spy*: any of them.) Now the verb for what happens behind the eyes.

You'll want to know: विचार करणे

विचार करणे — *vichār karṇe* — to think

Two words, not one. विचार *vichār* is a noun, “a thought”; करणे *karṇe* is “to do,” which has been yours since *kām karṇe*, “to work.” Marathi thinks by **doing a thought**.

The present runs on endings you already own: मी विचार करतो — *mī vichār karto*, a man speaking — and करते *karte*, a woman.

The letters in this word

विचार is वि (*vi* — व carrying the short-*i* stroke, which stands to the **left** of its letter), then चा (*chā*), then र (*ra*). करणे is क *ka*, र *ra*, णे *ṇe*.

The letters in this word

च before a long *ā* hides a sound change: Marathi says it nearer **ts**. So चार is *tsār*, and विचार is *vitsār* — spelling unchanged, mouth moved.

The word, taken apart — its roots and family

विचार is वि- *vi-* (“apart, thoroughly”) on the Sanskrit root चर् *car-*, “to move, to range about.” A thought is a **ranging over**. And *car-* comes from Indo-European ***k^welh₁-**, “to turn,” which surfaces as Greek *pélomai*, Latin *colō*, and — through a doubled form — English **wheel** and **cycle**. When English says you *turn something over* in your mind, that is the same picture, and विचार has it built into the root.

Your turn

Say these aloud:

- “vichār karṇe” — to think — with the *ts*: *vitsār*
- “I think” in your own gender — “mī vichār karto” or “karte”
- the root and its English cousins — “car-, to turn ... wheel, cycle”

Before you move on

Which two words make “to think”? (विचार “a thought” and करणे “to do.”) What did the root inside विचार mean? (**To move, to turn** — the root behind **wheel**.) What gender is a -णे infinitive as a noun? (**Neuter**.) And why *vitsār*? (Marathi’s च leans toward **ts** before a long *ā*.)

8.2 समजणे (samajṇe) — “to understand,” which happens to you

Say “I think” — *mī vichār karto* or *karte*. Now say “I know” the way Marathi builds it. (मला माहीत आहे — *malā māhīt āhe*, “to me known is.”) Understanding takes that second shape, not the first.

You’ll want to know: समजणे

समजणे — *samajṇe* — to understand

मला मराठी समजते — *malā marāṭhī samajte* — “I understand Marathi.”
Piece by piece: “to me Marathi is-understood.”

The letters in this word

समजणे is four plain letters with nothing hanging off the first three: स *sa*, म *ma*, ज *ja*, then णे *ṇe*. Each consonant carries its own built-in *a*, which is why *sa-ma-ja* comes out of three letters.

Grammar Lens: three verbs, one frame

You now have two Marathi sentences built the same way, and they belong side by side:

Marathi	word for word
मला मराठी येते	to-me Marathi comes — I know Marathi
मला मराठी समजते	to-me Marathi is-understood — I understand Marathi

In both, you sit in the dative — *malā*, “to me” — and the verb agrees with मराठी, a feminine noun, which is why both end -ते whoever is speaking.

The first one is worth hearing literally: knowing a language is it **coming** to you, on येणे — the verb that is जाणे with आ- “toward here” fixed to the front. Understanding works the same way. Neither is something you do.

The word, taken apart — its roots and family

समजणे comes through Prakrit *samibujjhai* from Sanskrit सम्बुध्यते *sam-budhyate*: सम् *sam*-, “together,” on the root बुध् *budh*-, “to wake up.” To understand is to come awake to something.

That root named a man: बुद्ध *buddha* is simply “the awakened one.” It is Indo-European *b^hewd^h-, which also gave Greek *punthánomai*, “to learn by asking,” and English *bid*. English keeps the picture in *it dawned on me*.

Your turn

Say these aloud:

- “malā marāṭhī samajte” — hearing “to me,” not “I”
- its twin — “malā marāṭhī yete”
- the root and the man it named — “budh-, to wake ... buddha”

Before you move on

Where does Marathi put the understander? (**In the dative** — *malā*.) Why *samajte* and not *samajto*, even for a man? (It agrees with मराठी, feminine.) What did *budh*- mean before it meant understanding, and whom did it name? (**To wake** — and the **Buddha**.) Which two verbs beside this one take *malā*? (माहीत असणे and येणे, in *malā marāṭhī yete*.)

8.3 वाचणे (vāchṇe) — “to read,” which is making a page speak

Say “I understand Marathi” — *malā marāṭhī samajte*. And “I see” — *mī pāhto* or *pāhte*. This verb sits between the two: eyes first, meaning after.

You’ll want to know: वाचणे

वाचणे — *vāchṇe* — to read

मी मराठी वाचतो — *mī marāṭhī vāchto* — “I read Marathi,” and वाचते *vāchte* if a woman is speaking. This one takes an ordinary subject: मी. Reading is something you do.

The letters in this word

वा is व *va* with the upright long-*ā* stroke; च is *cha*; णे is the retroflex infinitive ending. Three letters, and you have met all three before — व in *nāv*, च in *chār*, णे on every verb in the last chapter.

The word, taken apart — its roots and family

वाचणे goes back to Sanskrit वाचयति *vācayati*, and *vācayati* is not its own verb — it is the root वच् *vac-*, “to speak,” with a gear changed: “to **make** speak.” Marathi reading is making the marks talk. That is not a poetic gloss; it is the grammar of the Sanskrit form.

वच् is Indo-European ***wek**^w-. Latin took it as *vōx*, “voice,” and *vocāre*, “to call,” and from that pair English has **voice**, **vocal**, **vocation**, **in-voke** and **advocate**. Greek has *óps*, “voice.”

One honest footnote: Marathi also has a वाचणे meaning “to survive,” and it is a different word — from *vañcati*, “to escape.” Same spelling, unrelated history.

Your turn

Say these aloud:

- “*mī marāṭhī vāchto*” or “*vāchte*” — in your own gender
- the literal sense — “to make it speak”
- the cousins — “*vāch-* ... voice, vocal, invoke”
- the chapter’s three verbs so far — “*vichār karṇe*, *samajṇe*, *vāchṇe*”

Before you move on

What did वाचणे’s Sanskrit ancestor literally mean? (**To make speak** — reading as speaking aloud.) Name two English words from the same root. (**Voice, vocal, invoke, advocate**: any two.) Which of your verbs takes *mī* and which takes *malā* — *vāchṇe* or *samajṇe*? (*Vāchṇe* takes मी; *samajṇe* takes मला.)

8.4 लिहिणे (lihine) — “to write,” which began as scratching

Three verbs and three roots: *vichār karṇe* on a root meaning **to turn**, *samajṇe* on one meaning **to wake**, *vāchṇe* on one meaning **to speak**. Say all three. The fourth root is the most physical of the lot.

You’ll want to know: लिहिणे

लिहिणे — *lihine* — **to write**

मी माझं नाव लिहितो — *mī māṇhami nāv lihito* — “I write my name,” and लिहिते *lihite* if a woman says it. The stem keeps its *i*: *lihi-*, not *lih-*.

The letters in this word

लि is ल *la* with the short-*i* stroke standing to its left; हि is ह *ha* with the same stroke; then णे. One stroke, used on two letters running: *li-hi-ṇe*.

The word, taken apart — its roots and family

लिहिणे comes through Prakrit *lihai* from Sanskrit लिखति *likhati*, and *likh-* meant **to scratch**, **to score** before it meant to write. Its plainest relative inside Sanskrit is रेखा *rekhā*, “a line, a scratch.”

Outside Indo-Aryan the cousins are genuinely disputed, and this lesson claims none. What is not disputed is that three families reached for the same picture: Latin *scribere* also meant **to scratch**, and stands behind **scribe** and **script**; English **write** began as Germanic “to tear, to score.”

Grammar Lens: what Marathi writes that Hindi does not

A lesson about writing is the place for two things Marathi writes its own way. Count to five: *ek*, *don*, *tīn*, *tsār*, *pāch*. दोन ends in a न that Hindi’s दो does not have. पाच has no nasal mark, where Hindi writes पाँच. And लिहिणे is a noun as well as a verb — “writing,” the thing — because every -णे infinitive is, and every one of them is **neuter**.

Your turn

Say these aloud:

- “mī mājham nāv lihito” or “lihite”
- the chapter’s four verbs — “vichār karṇe, samajṇe, vāchṇe, lihṇe”
- their four roots — “to turn, to wake, to speak, to scratch”

Before you move on

What did *likh-* mean first, and which two families named writing the same way? (**To scratch** — Latin *scribere*, English *write*.) Give the four verbs of this chapter and what their roots meant. (*Vichār karṇe* / turn, *samajṇe* / wake, *vāchṇe* / speak, *lihṇe* / scratch.) Which one refuses मी? (समजणे — it takes *malā*.) Which number does Marathi write with an extra न, and which with one mark fewer than Hindi? (दोन; पाच.)

Chapter 9

Taking, Asking, Helping, Liking

By the end of this chapter: I can take, ask, help and say what I like and what I love in Marathi, build a fresh verb by putting करणे behind a noun, and say why मला मराठी आवडते has no room for me as its subject while मी प्रेम करतो does.

Say मला मराठी आवडते and hear that you are not its subject, set it against मी प्रेम करतो where you are, place both beside मला मराठी येते and मला मराठी समजते so one frame carries three meanings, and run the chapter's four verbs back with where each came from — Sanskrit ग्रह् beside English grab, विचार doing double duty as thought and question, Arabic मदद through Persian, and आवडणे with no Sanskrit ancestor to claim.

9.1 घेणे (gheṇe) — “to take,” which you have been saying since Chapter 4

Say “to write” and “to read” — लिहिणे, वाचणे — and what लिहिणे's root meant before writing existed. (**To scratch.**) This next verb has been in your mouth since the farewells, unrecognised.

You'll want to know: घेणे

घेणे — gheṇe — to take

काळजी घ्या — kālji ghyā, “take care” — is this verb. घ्या ghyā is its respectful command, घे ghe the familiar one you would use with तू. The plain present is मी घेतो mī gheto / घेते ghete.

Note the -त्- that appears in the present but not the infinitive: *ghe-* on its own, *ghe-t-o* when conjugated. Marathi’s commonest verbs are the ones that bend.

The letters in this word

घ is *gha* — a *g* with a real puff of breath behind it, a separate letter from ग *ga*, exactly as ख *kha* is separate from क *ka*. Add the -e stroke over the top and the retroflex णे: *ghe-ṇe*.

The word, taken apart — its roots and family

घेणे comes through Prakrit *gahai* from the Sanskrit root ग्रह् *grah-*, “to seize, to grasp” — the root of ग्रहण *grahan*, an eclipse, which is the sky being seized.

Its older Vedic shape was ग्रभ् *grabh-*, and that **bh** is the piece worth holding on to: Indo-European ***g^hreb^h**- kept its *bh* in Vedic and turned it into a *b* in Germanic, which is English **grab**. Marathi’s *gh-* is what four thousand years did to the same first consonant. *Grabh* and *grab* are the same word.

Your turn

Say these aloud:

- “ghene” — to take — then “mī gheto” or “ghete”
- the farewell it was hiding in — “kāl̥jī ghyā”
- the Vedic form and its English cousin — “grabh ... grab”

Before you move on

Which farewell has been using घेणे all along, and what does it literally say? (काळजी घ्या — “take care.”) Which English word is the same word as Vedic *grabh*? (**Grab**.) What gender is घेणे when it acts as a noun? (**Neuter**, like every -णे form.) Say “to write” and “to take” in one breath. (*Lihine, ghene*.)

9.2 विचारणे (vichārṇe) — “to ask,” built out of “a thought”

Say “to take” — *gheṇe*. Say “to think” — *vichār karṇe* — and what its root meant. (**To turn, to range about.**) Hold that word. The next verb is it, with four letters fewer.

You’ll want to know: विचारणे

विचारणे — *vichārṇe* — **to ask**

मी विचारतो — *mī vichārto* — “I ask,” विचारते *vichārte* if a woman speaks. And the same च rule holds: say it *vitsārto*, with the *ts* Marathi puts before a long *ā*.

The letters in this word

There is nothing new. विचारणे is विचार — the noun from the last chapter, letter for letter — with णे on the end. If you can write “a thought,” you can write “to ask.”

The word, taken apart — its roots and family

Marathi builds both verbs on विचार:

Marathi	what it means
विचार करणे	to think — “to do a thought”
विचारणे	to ask — the thought made into a verb

Both sit on वि- plus चर् *car-*, “to move, to range.” Thinking is ranging over something privately; asking is ranging over it out loud with somebody else. Marathi did not decide they were different enough to need different words.

This is Marathi’s own arrangement, not a family inheritance. Hindi’s verb for asking, पूछना *pūchnā*, comes from an unrelated root, and Hindi’s विचार stays a noun. Where a language draws its lines is a choice each language makes for itself.

Your turn

Say these aloud:

- the pair, slowly — “vichār karṇe ... vichārṇe”
- “I ask” in your own gender — “mī vichārto” or “vichārte”
- both with the Marathi *ts* — “vitsār karto ... vitsārto”

Before you move on

What is the only difference between Marathi’s “to think” and its “to ask”? (करणे — thinking adds “to do”; asking puts -णे straight onto विचार.) What did the shared root mean? (**To move, to turn over.**) How is the च said in both? (Nearer **ts** before the long *ā*.) And “to take”? (*Gheṇe*.)

9.3 मदत करणे (madat karṇe) — “to help,” a word that travelled

Say “to ask” — *vichārṇe*. And say “I know” — *malā māhīt āhe* — then name where माहीत was borrowed from. (**Arabic, through Persian.**) A second borrowed word from that same layer is coming.

You’ll want to know: मदत करणे

मदत करणे — *madat karṇe* — **to help**

Built the way *kām karṇe* and *vichār karṇe* are built: a noun, मदत *madat* (“help”), with करणे behind it. मी मदत करतो — *mī madat karto* — “I help,” करते *karte* for a woman.

That pattern is the most productive thing in the language: put करणे behind almost any noun and Marathi will accept the verb.

The letters in this word

मदत is three bare consonants, each with its built-in *a*: म *ma*, द *da*, त *ta* — *ma-da-t*, with the last *a* falling away in speech as it usually does at the end of a Marathi word.

The word, taken apart — its roots and family

मदत is **Arabic** *madad*, borrowed through **Persian**. Its Arabic root means **to stretch out, to extend** — *madad* is a thing extended: a hand, or reinforcements sent to an army. Help, named as reach.

It belongs to the layer of Persian and Arabic administration that settled into Marathi under the Deccan sultanates — the same layer that gave you माहीत in *malā māhīt āhe*, and हरकत in *kāhī harkat nāhī*. Three everyday words, one route.

One small tell worth keeping: Marathi writes मदत, with a final त. Hindi and Urdu write मदद, with a द. The same loan, landing differently in each language — which is what borrowing normally looks like.

Your turn

Say these aloud:

- “madat karṇe” — then “mī madat karto” or “karte”
- the three करणे verbs you have — “kāṁ karṇe, vichār karṇe, madat karṇe”
- what the Arabic root meant — “to stretch out”

Before you move on

What did मदत’s Arabic root mean before it meant help? (**To stretch out, to extend.**) Which road did it travel to reach Marathi? (**Persian.**) Name another word you have from that same layer. (माहीत, or हरकत in *kāhī harkat nāhī*.) And how does Marathi spell the end of the word, against Hindi and Urdu? (With त, not द.)

9.4 आवडणे (āvaḍṇe) — “to like,” which is not something you do

Three verbs from this chapter: *gheṇe*, *vichārṇe*, *madat karṇe*. Say them. Each let you be the one acting. The fourth will not.

You’ll want to know: आवडणे

आवडणे — *āvaḍṇe* — to like

मला मराठी आवडते — *malā marāṭhī āvaḍte* — “I like Marathi,” or word for word, “**to me** Marathi pleases.”

The letters in this word

आ is the standalone long *ā*; व *va*; ङ *ḍa*, a **retroflex** *d* made with the tongue curled back — new here, and not the द *da* of *madat*; then णे. *Ā-va-ḍa-ṇe*.

Grammar Lens: the third sentence built this way

Marathi	word for word
मला मराठी येते	to-me Marathi comes — I know it
मला मराठी समजते	to-me Marathi is-understood — I understand it
मला मराठी आवडते	to-me Marathi pleases — I like it

One frame, three meanings. You are मला in all three, never the subject, and the verb agrees with मराठी. Change the thing liked and the ending follows it: a masculine thing takes आवडतो, a neuter thing आवडतं.

The word, taken apart — its roots and family

आवडणे is **Marathi’s own** — straight down from Old Marathi, cousin to Konkani *āvaḍ*, with **no Sanskrit ancestor securely established**, so this lesson claims none. Hindi and Urdu say पसंद *pasand*, borrowed from Persian.

Loving is a separate verb: प्रेम करणे *prem karṇe*, and there you **are** the subject — मी प्रेम करतो. प्रेम is Sanskrit *preman*, on प्री *prī-*, “to be dear,” from Indo-European ***preyH-**. Germanic built a verb “to love” on it, and from that English has **friend** — the one loved — and **free**.

Why it’s said this way

Chapter 6’s rule holds here: neither language is simply older. Marathi’s दोन took its final *n* by copying तीन — an innovation. Hindi’s पाँच kept a nasal Marathi dropped — a retention. Now a verb: Marathi kept its native word for liking, Hindi took a Persian one.

Your turn

Say these aloud:

- “malā marāṭhī āvaḍte” — hearing “to me,” not “I”
- the one you do — “mī prem karto” or “karte”
- this chapter’s four — “gheṇe, vichārṇe, madat karṇe, āvaḍṇe”

Before you move on

Who is the subject of *malā marāṭhī āvaḍte*? (मराठी — not you.) Which of the two puts you in the subject’s chair? (प्रेम करणे.) Which English words share प्रेम’s root? (**Friend**, **free**.) Now the chapter’s four sources — *gheṇe*, *vichārṇe*, *madat karṇe*, *āvaḍṇe*. (Sanskrit ग्रह्, cousin of *grab*; विचार, the thinking word itself; **Arabic** *madad* through Persian; and आवड, native.)

Chapter 10

Water, Tea, Milk, and Bhakri

By the end of this chapter: I can politely ask for water, tea, milk, or bhakri in Marathi, name which of the four is a Chinese loan and which never touched Sanskrit at all, and say why all three of Marathi's genders already show up in one short chapter.

The chapter closes on भाकरी, the request that breaks every pattern the first three set: the reader produces all four requests with कृपया, sorts पाणी and दूध (inherited from Sanskrit) against चहा (a Chinese loan by the overland route) against भाकरी (native to Marathi's own ground, sharing Sanskrit with none of them), and names the three genders the four words already cover.

10.1 पाणी (pāṇī) — the first thing you'll actually ask for

आवडणे told you what you like; प्रेम करणे what you love. This chapter asks for something smaller and more frequent than either: a drink.

You'll want to know: पाणी

पाणी — pāṇī — water

The letters in this word

Nothing new here. प pa you have from punhā; ण you have from every -णे verb so far; ी is the familiar long ī. पा-णी.

Grammar Lens: asking politely

पाणी, कृपया. — *pāṇī, kṛpayā*. — **Water, please.**

कृपया *kṛpayā* is Sanskrit’s own instrumental of कृपा *kṛpā*, “mercy, kindness” — literally “by kindness, out of kindness.” Name the thing you want, add कृपया, and the request is complete: no verb for “give” required. This is the pattern the whole chapter reuses, and the first time this track has built a “please” of any kind — a spine node this book had left empty until now.

The word, taken apart — its roots and family

पाणी continues Maharastri Prakrit **pāṇīa**, from Sanskrit पानीय *pānīya*, “that which is to be drunk,” built on पा *pā-*, “to drink.” That root is Indo-European **peh₃(i)-**, and English keeps two disguised pieces of it: **potion** and **poison** both come through Latin *potare*, “to drink” — a poison, by origin, is just a drink gone wrong. Greek turned the same idea into *sympotēs*, “one who drinks together,” which English keeps as **symposium**.

Your turn

- *Say it:* **pāṇī** — water
- *Say it:* **pāṇī, kṛpayā**. — water, please
- *Run through:* **malā marāṭhī āvaḍte**, then **pāṇī, kṛpayā** — liking and requesting, side by side

Before you move on

Ask for water politely. (**Pāṇī, kṛpayā**.) What does कृपया literally mean? (“By kindness.”) Which two English words for a drink, and one for a whole gathering of them, share **pāṇī**’s root? (**Potion, poison, symposium**.)

Sources: Wiktionary: पाणी; Wiktionary: कृपया.

10.2 चहा (chahā) — a word that took the overland road

पाणी, कृपया — water, please. Say it once more, then ask for something that is not water at all.

You'll want to know: चहा

चहा — *chahā* — tea

चहा, कृपया. — *chahā, kṛpayā*. — Tea, please.

The letters in this word

Nothing new. च you already say near *ts* from Chapter 6's चार; ह is नमस्कार's; ा the familiar long *ā*. *Cha-hā*.

The word, taken apart — its roots and family

Every other word in this chapter reaches back to Sanskrit. चहा does not — it is a loanword from Mandarin **cha**, and it reached Marathi by the **overland** route, through Persian and Turkic trade, the same road that gave Hindi चाय *chāy*, Bengali *cha*, and Persian *chāy* their words for the same drink. A second branch of the same plant travelled by **sea**: Dutch traders carried the Hokkien word **te** to Western Europe, which is why English says **tea**, not *cha*. One plant, two words, two trade routes. चहा is also this chapter's first **masculine** noun, against पाणी's neuter — a reminder that Marathi's three genders do not sort words by where they came from.

Your turn

- *Say it*: **chahā, kṛpayā** — tea, please
- *Name*: the two trade routes — overland to *chāy/chahā*, by sea to *tea*
- *Say it*: both requests — **pāṇī, kṛpayā ... chahā, kṛpayā**

Before you move on

Ask for tea politely. (**Chahā, kṛpayā**.) Which language does चहा ultimately come from? (**Mandarin Chinese, cha.**) Which English

word for the same plant took the sea route instead? (**Tea.**)

Sources: Wiktionary: चहा.

10.3 दूध (dūdh) — back to Sanskrit, and a surprising English cousin

चहा broke the pattern — a loanword with no Sanskrit behind it. This next word rejoins पाणी’s family: inherited, traceable, Indo-European.

You’ll want to know: दूध

दूध — *dūdh* — **milk**

दूध, कृपया. — *dūdh, kṛpayā.* — **Milk, please.**

The letters in this word

One new mark: ू, the **long ū** vowel sign — a longer hook under the consonant than any you’ve written so far. द you have from *dhanyavād* and *madat*; ध from *dhanyavād* too. *Dū-dh*.

The word, taken apart — its roots and family

दूध continues Maharastri Prakrit **duddha**, from Sanskrit दुग्ध *dugdha*, “milked, milk” — literally the past participle of दुह् *duh-*, “to milk.” That root traces to Indo-European ***d^hewg^h-**, “to be fit, to be of use, to produce” — milking as *producing something useful*. Germanic kept the same root for a different sense of “useful, capable”: English **doughty**, “brave and able,” is *dūhtig* in Old English, built on this exact root. Milk and doughtiness, four thousand years apart, share one ancestor.

Your turn

- *Say it:* **dūdh, kṛpayā** — milk, please
- *Say it:* what *dugdha* literally was — “milked”
- *Run through:* all three requests — **pāṇī, chahā, dūdh** — kṛpayā

Before you move on

Ask for milk politely. (Dūdh, kṛpayā.) What English word for “brave and capable” shares दूध’s root? (Doughty.)
Sources: Wiktionary: दूध.

10.4 भाकरी (bhākarī) — the request that breaks the pattern

Three requests so far: pāṇī, chahā, dūdh. Two inherited from Sanskrit, one borrowed from Chinese. The fourth belongs to neither story.

You’ll want to know: भाकरी

भाकरी — *bhākarī* — a round flatbread, the everyday Maharashtra bread — of jowar, bajra, or rice flour, not wheat

भाकरी, कृपया. — *bhākarī, kṛpayā.* — Bhakri, please.

The letters in this word

Nothing new. भ from *bheṭū*, क from everywhere, र from *marāṭhī*, ी the familiar long *ī*. *Bhā-ka-rī*.

The word, taken apart — its roots and family

भाकरी is inherited from Old Marathi **bhākarī**, from Proto-Indo-Aryan ***b^hakkaras**, “heap, pile, lump” — the flatbread named for the lump of dough it started as. That reconstruction is as far back as the sources trace it; its own root before Proto-Indo-Aryan is not established, so this lesson claims none rather than inventing one.

Unlike पाणी and दूध, भाकरी is not a Sanskrit tatsama or tadbhava — it never touched classical Sanskrit. And unlike चहा, it is no loanword either — a regional word, close kin to Gujarati *bhākhri* and Kannada *bakkari*, and simply **not** Hindi’s word for bread: Hindi asks for रोटी *roṭī*, an unrelated root. A Delhi shopkeeper would not recognize the request; a Pune one would hand you lunch.

Why it's said this way

Say the four requests once more and notice their genders: पाणी neuter, चहा masculine, दूध neuter, भाकरी feminine. Four everyday nouns, all three of Marathi's genders, in one short chapter — proof, alongside the verbs' present-tense endings, that the third gender Hindi lost is not a museum piece here.

Your turn

- *Say it:* all four requests, kṛpayā each time — **pāṇī**, **chahā**, **dūdh**, **bhākarī**
- *Say it:* “I eat bhakri” — **mī bhākarī khāto** or **khāte**, putting Chapter 7's खाणे to work on a word it never had before
- *Name:* which of the four is neither Sanskrit nor a loanword — **bhākarī**

Before you move on

What did भाकरी's Proto-Indo-Aryan ancestor mean? (**A heap, a lump.**) What does Hindi ask for instead? (रोटी, an unrelated root.) Give all four requests with their genders. (पाणी n, चहा m, दूध n, भाकरी f — all with कृपया.) Sort the four sources: two from Sanskrit, one a Chinese loan, one purely regional. (**Pāṇī**, **dūdh** — Sanskrit; **chahā** — Chinese; **bhākarī** — regional.) Sources: Wiktionary: भाकरी.

Chapter 11

Friend and Family

By the end of this chapter: I can name a friend, a family, a brother, and a sister in Marathi, sort each word into a tatsama taken up whole from Sanskrit or a tadbhava worn down by sound change, and say which sibling word is genuinely English's cousin and which is not.

The chapter closes on बहीण, deliberately not a cousin of English sister: the reader produces मित्र, कुटुंब, भाऊ and बहीण, sorts the four into two tatsamas (मित्र, कुटुंब) and two tadbhavas (भाऊ, बहीण), and names भाऊ as the secure cousin of brother against बहीण's unrelated root — while recalling कुटुंब's gender split from Hindi and मित्र's root in a covenant god's name.

11.1 मित्र (mitra) — a friend, and a very old bond

You can ask for **bhākarī** now. This chapter turns from what you'd request to who you'd share it with.

You'll want to know: मित्र

मित्र — *mitra* — friend (masculine)

The letters in this word

Two things worth pausing on. ि, the **short i** vowel sign, is new — written *before* the consonant it belongs to but said *after* it, so मि is read *mi*, not *im*. And त्र is त joined to र by a *halant*, the same conjunct mechanism as *punhā*'s न्हा, just a different pair of letters. *Mi-tra*.

The word, taken apart — its roots and family

मित्र is a **learned borrowing** straight from Sanskrit मित्र *mitra* — taken up whole, not worn down by centuries of sound change the way most everyday words are. Its root is Indo-European **mey-*, “to bind,” and the same word named a god: Avestan **Mithra** and Old Persian **Mithra** were divine witnesses to oaths — the bond itself, personified, before the word settled into ordinary Sanskrit as “friend.”

Grammar Lens: taken up whole, not worn down

Sanskrit-descended Marathi words come in two kinds: a **tatsama**, borrowed directly with its Sanskrit shape mostly intact — मित्र is one — and a **tadbhava**, one that passed through centuries of Prakrit sound change and came out reshaped. भाकरी was neither: it never touched Sanskrit at all. This chapter will show both a tatsama and a tadbhava for family words, so you can hear the difference.

Your turn

- *Say it:* **mitra** — friend
- *Say it:* what its root meant before “friend” — “to bind”
- *Name:* the god-name that shares this root — **Mithra**
- *Say it:* **mitra**, then **bhākarī** — a learned word beside a native one whose own root went no further back than “a heap, a lump”
- *Recall:* Chapter 10’s four requests and their three genders — **pāṇī** neuter, **chahā** masculine, **dūdh** neuter, **bhākarī** feminine

Before you move on

What did मित्र’s root mean before “friend”? (**To bind.**) What god-name shares that root? (**Mithra.**) Is मित्र a tatsama or a tadbhava? (**Tatsama** — taken up whole from Sanskrit.)

Sources: Wiktionary: मित्र.

11.2 कुटुंब (kuṭumb) — family, and a gender Hindi disagrees with

मित्र was taken up whole from Sanskrit, not worn down. This next word was too — and it names the group your friend belongs to as well.

You’ll want to know: कुटुंब

कुटुंब — *kuṭumb* — **family** (neuter)

The letters in this word

One new mark: ॠ, the **short u** vowel sign, a small hook under the consonant — the short partner of *dūdh*’s long ॡ. ॠ you have informally from *marāṭhī*; ॠ the familiar anusvāra. *Ku-ṭu-mb*.

The word, taken apart — its roots and family

कुटुंब is a **tatsama**, a learned borrowing from Sanskrit कुटुम्ब *kuṭumba*, “household, family” — like मित्र, taken up whole rather than worn down by sound change. Unlike मित्र, its story does not reach a secure Indo-European root: a Dravidian origin for Sanskrit’s own *kuṭumba* has been proposed, but it is not settled, so this lesson names the dispute rather than inventing a resolution.

Grammar Lens: a gender Hindi disagrees with

The very same Sanskrit word carries two different genders in its two daughters: Marathi’s कुटुंब is **neuter**, Hindi’s कुटुंब is **masculine**. Both borrowed the identical tatsama; each language then had to assign it a gender inside its own system, and they assigned it differently. A word’s gender is not carried in with its meaning — it is decided fresh by whichever language receives it.

Your turn

- *Say it:* **kuṭumb** — family
- *State:* its gender in Marathi against Hindi — neuter here, masculine there

- *Say it:* **mitra**, then **kuṭumb** — two tatsamas in a row
- *Recall:* Chapter 10's own gender lineup — कुटुंब's neuter joins पाणी and दूध, after **bhākarī**'s feminine closed out all three genders in one chapter

Before you move on

What gender is कुटुंब in Marathi, and how does that differ from Hindi? (**Neuter** here, **masculine** there — same borrowed word, different choice.) Is कुटुंब's pre-Sanskrit origin settled? (**No** — a Dravidian source is proposed but disputed.)
Sources: Wiktionary: कुटुंब.

11.3 भाऊ (bhāū) — brother, and this time the resemblance is real

मित्र and कुटुंब were both taken up whole from Sanskrit. This next word was not — it was worn down, letter by letter, over centuries.

You'll want to know: भाऊ

भाऊ — *bhāū* — **brother** (masculine)

The letters in this word

One new letter: ऊ, the **independent long ū**, used here because a Marathi word cannot stack one vowel mark on top of another — after आ's ा, the second vowel needs its own full letter. भ you have from *bhetū*. *Bhā-ū*.

The word, taken apart — its roots and family

भाऊ is a **tadbhava** — not borrowed whole like मित्र or कुटुंब, but the ordinary Prakrit-worn descendant of Sanskrit भ्रातृ *bhrātṛ*, three syllables ground down to two over a thousand years of speech. That root is Indo-European **b^hréh₂tēr*, and here the family resemblance to English is not a false friend — it is the real thing: **brother**, Latin **frāter**, and Sanskrit's own **bhrātṛ** are all the same word, worn down four different ways by four different languages.

Your turn

- *Say it:* **bhāū** — brother
- *Name:* three languages that share this root — English, Latin, Sanskrit
- *Say it:* the three so far — **mitra**, **kuṭumb**, **bhāū**

Before you move on

Is भाऊ a tatsama or a tadbhava? (**Tadbhava** — worn down by sound change, not borrowed whole.) Which English word is the very same word as भाऊ? (**Brother**.)

Sources: Wiktionary: भाऊ.

11.4 बहीण (bahīṇ) — sister, deliberately not English’s cousin

Three words so far: **mitra**, **kuṭumb**, **bhāū**. Say them, and say which one is a genuine cousin of an English word. (**Bhāū** — brother.) Its pair is not so simple.

You’ll want to know: बहीण

बहीण — *bahīṇ* — **sister** (feminine)

The letters in this word

Nothing new. ब from *baraṇ*, ह from *namaskār*, ी the familiar long *ī*, ण from every -णे verb. *Ba-hī-ṇ*.

The word, taken apart — its roots and family

बहीण is a **tadbhava**, worn down like भाऊ: Old Marathi *bahīṇ*, from Maharaṣṭri Prakrit *bhaiṇī*, from Sanskrit भगिनी *bhaginī*. There the resemblance to **brother**’s pair ends. **Bhaginī** is traditionally connected to भज् *bhaj*-, “to share, to apportion” — a sister as one who shares in the household. That root has nothing to do with Indo-European **swésōr*, the ancestor of English **sister**. Two words that translate each other perfectly are, underneath, unrelated.

Grammar Lens: the chapter's whole shape, in two pairs

word	kind	route
मित्र, कुटुंब	tatsama	taken up whole from Sanskrit
भाऊ, बहीण	tadbhava	worn down by Prakrit sound change

Notice, too, how each pair *looks*: मित्र and कुटुंब carry conjuncts and marks a learner has to stop for; भाऊ and बहीण do not — plain consonants and vowels, the shape sound change tends to leave behind. And of the tadbhava pair, only भाऊ is a secure English cousin; बहीण is not.

Your turn

- *Say it*: all four — **mitra**, **kuṭumb**, **bhāū**, **bahīṇ**
- *Sort*: which two are tatsama, which two are tadbhava
- *Name*: which sibling word is English's real cousin, and which is not — **bhāū** yes, **bahīṇ** no

Before you move on

Is बहीण related to English **sister**? (**No** — a different Sanskrit root entirely.) Which sibling word *is* related to its English counterpart? (भाऊ, to **brother**.) Sort the chapter's four words into tatsama and tadbhava. (**Mitra**, **kuṭumb** — tatsama; **bhāū**, **bahīṇ** — tadbhava.) What did कुटुंब's gender turn out to be, against Hindi's? (**Neuter** here, masculine there.) And what did मित्र's root mean before "friend"? (**To bind**.)

Sources: Wiktionary: बहीण; Wiktionary: भगिनी.

Chapter 12

Eye, Ear, Mouth, and Nose

By the end of this chapter: I can name the eye, ear, mouth, and nose in Marathi, say the retroflex ढ formally for the first time, and tell which of the four carries the most secure English cognate and which replaced its own inherited word entirely.

The chapter closes on नाक, completing the face: the reader produces डोळा, कान, तोंड and नाक with their genders, and sorts the four by kind of history — डोळा replaced the old Indo-Aryan eye-word with one that once meant “swing”; कान’s root is honestly disputed; तोंड keeps a formal doublet, मुख, standing beside it; नाक alone reaches English नोज़ / nose without qualification.

12.1 डोळा (ḍoḷā) — the letter you’ve heard since Chapter 4, formally

मित्र, कुटुंब, भाऊ, बहीण — the people you’d introduce. This chapter turns to the body you’d ask after when you check how someone is.

You’ll want to know: डोळा

डोळा — ḍoḷā — eye (masculine)

The letters in this word

ड you have from āvaḍḇe; ो the familiar o mark, from bolḇe. Then ढ — the retroflex “l” you first met, unlabeled, inside Chapter 4’s काळजी. Formally: tongue curled back, same place as ट and ण. Standard Hindi dropped this

sound centuries ago; Marathi kept it, sharing it with the Dravidian languages to the south and with Gujarati. *Ḍo-lā*.

The word, taken apart — its roots and family

डोळा continues Maharastri Prakrit **ḍola**, “eye,” from Sanskrit दोल *dola* — “a swing, a swinging.” Somewhere in Prakrit, “a swinging thing” came to mean “eye,” and that word pushed out the one you might expect: the true inherited Indo-Aryan eye-word is Sanskrit अक्षि/अक्ष *akṣi/akṣa*, from Indo-European **h₃ekʷ-*, the very cousin of Latin **oculus** and English **eye**. Hindi’s आँख *ākh* continues that old word, worn down through Prakrit *acchi*. Marathi’s eye is not that word at all — it is a replacement, built on something that once just meant *swing*.

Your turn

- *Say it:* **ḍolā** — eye
- *Say it:* what its Sanskrit root actually meant — “a swing”
- *Name:* the word Marathi’s eye-word replaced — **akṣi**, Hindi’s **ānkh**
- *Say it:* what you do with your डोळे — **pāhṇe**, “to see,” Chapter 7’s verb whose own root was Indo-European **spek-*
- *Recall:* Chapter 11’s tatsama/tadbhava split — मित्र, कुटुंब taken up whole, भाऊ, बहीण worn down — and कुटुंब’s own neuter gender against Hindi’s masculine

Before you move on

What did डोळा’s Sanskrit root originally mean? (**A swing.**) Is डोळा the same word as Hindi’s आँख? (**No** — Marathi replaced the old eye-word entirely.) What Marathi letter appears in डोळा that Hindi lost? (ळ, the retroflex *l*.)

Sources: Wiktionary: डोळा; Wiktionary: दोल.

12.2 कान (kān) — an ear, and a cluster you’ve seen simplify before

डोळी’s own root turned out to be a surprise — a swing, not the old eye-word. This next word has a different kind of surprise: not what it meant, but how its middle got simpler.

You’ll want to know: कान

कान — *kān* — ear (masculine)

The letters in this word

Nothing new. क, ा, न are all familiar from Chapter 1 onward. *Kā-n*.

The letters in this word

कान continues Sanskrit कर्ण *karṇa*. Getting there took the same kind of step Chapter 6 traced in दोन: Prakrit could not keep Sanskrit’s consonant cluster **ṛṇ** intact, so it simplified — not by copying a neighbor this time, but by **doubling** the surviving consonant, *rṇ* → *ṇṇ*, giving Prakrit कण्ण *kaṇṇa*. Old Marathi then simplified the geminate back down to one *ṇ* with a lengthened vowel: *kāna*. Different cluster, different path, same underlying habit — Prakrit does not tolerate what Sanskrit could pack into one syllable.

The word, taken apart — its roots and family

Past Sanskrit, कर्ण’s own origin is genuinely **disputed** among scholars — proposals connect it to a word for “point, spike,” to a root for “handle, grip,” even to the verb “to hear,” but none has won general acceptance. Rather than choose one and present it as settled, this lesson names the dispute and stops there, the same honest gap Chapter 11 named for कुटुंब, and the same restraint that kept बहीण from being handed a false cousin — बहीण looks like it should match English *sister*, and does not.

Your turn

- *Say it: kān* — ear
- *Trace it: karṇa* → *kaṇṇa* → *kāna*, the cluster ground down and then simplified again

- Say it: **ḍoḷā, kān** — eye, ear

Before you move on

What did Prakrit do to Sanskrit कर्ण's *ṛṇ* cluster? (**Doubled it** to *ṇṇ*, then Old Marathi simplified that back to one *ṇ*.) Is कर्ण's root beyond Sanskrit settled? (**No** — disputed.) Which Chapter 6 word also showed a consonant cluster changing shape? (दोन, whose final *n* came from copying तीन.)

Sources: Wiktionary: कान.

12.3 तोंड (tōḍ) — the mouth, and the formal word standing behind it

डोळा, कान — eye, ear. Recall how कान's middle got simpler — *ṛṇ* doubled to *ṇṇ*, then simplified again. One more word before the chapter's closing one.

You'll want to know: तोंड

तोंड — *tōḍ* — **mouth** (neuter)

The letters in this word

Nothing new. त, ो, ं, ड are all familiar. *Tō-ḍ*, the anusvāra nasalizing the *o*.

The word, taken apart — its roots and family

तोंड continues Maharastri Prakrit तुंड *tuṇḍa*, from Sanskrit तुण्ड *tuṇḍa*, “mouth, snout, beak” — a tadbhava, worn down the way भाऊ was. Marathi keeps a second, formal word for the same thing: मुख *mukh*, borrowed whole from Sanskrit exactly the way मित्र and कुटुंब were — the same everyday-versus-formal split कुटुंब's chapter didn't need to show you for a body part until now. You'll hear तोंड in daily speech and मुख in writing, formal address, and words like *mukhya*, “chief, principal” — literally “at the mouth/face of things.”

Your turn

- *Say it:* तोंड — mouth
- *Name:* its formal doublet — **mukh**
- *Say it:* three so far — ढोला, kān, तोंड

Before you move on

What is तोंड's formal Sanskrit doublet? (मुख, *mukh*.) Is तोंड itself borrowed whole or worn down? (**Worn down** — a tadbhava, like भाऊ.)

Sources: Wiktionary: तोंड.

12.4 नाक (nāk) — the face, completed

डोळा, कान, तोंड — say them. One face part left, and it is the one with the plainest history of the four.

You'll want to know: नाक

नाक — *nāk* — **nose** (neuter)

The letters in this word

Nothing new. न, ा, क — all familiar since Chapter 1. *Nā-k*.

The word, taken apart — its roots and family

नाक continues Prakrit णक्क *ṇakka*, “nose,” built on Sanskrit नस् *nas-*, “nose,” plus a suffix. You may have met the *other* Sanskrit route to “nose,” नासिका *nāsikā*, elsewhere — Marathi's नाक took the shorter one, straight from the bare root. Either way the destination is the same Indo-European **neh₂s-*, which English inherited directly as **nose**. Of this chapter's four words, नाक is the one whose English cousin needs no qualification at all.

Why it's said this way

Run the face back one more time, and notice each word told a different kind of story: डोळा replaced its old Indo-Aryan word entirely, with

something that once just meant *swing*; कान's root is honestly **disputed**, even though its $r\eta \rightarrow \eta\eta \rightarrow \eta$ path is not; तोंड keeps a formal Sanskrit doublet, मुख, standing beside it; and नाक is the plainest of the four — a straight, secure line to Sanskrit and to English both. Not every word in a family carries the same amount of history, and knowing which is which is worth more than assuming they all match.

Your turn

- *Say it*: all four, with gender — ढोलā m, kān m, tōḍ n, nāk n
- *Name*: which is a secure English cousin (**nāk**), which replaced its old word (ढोलā), which is disputed (**kān**), which has a formal doublet (**tōḍ**)
- *Say it*: what you do with your डीळे — pāhṇe, “to see”

Before you move on

Which English word is नाक's most secure cousin? (**Nose**.) Sort the four face words by their history — replaced, disputed, twinned, secure. (ढोलā replaced its old word; kān's root is disputed; tōḍ has the formal doublet **mukh**; nāk is the secure one.) What Chapter 7 verb names what your eyes do? (**Pāhṇe**, “to see.”)

Sources: Wiktionary: नाक.

Chapter 13

Heart

***By the end of this chapter:** I can name the heart in Marathi, name three English words that share its root, and say what makes it different from every other word this book has taken apart: it never drifted at all.*

The reader produces हृदय and its three secure English cousins — heart, cordial, cardiac — then sets it against वाचणे’s drift from speaking to reading, समजणे’s drift from waking to understanding, and डोळा’s replacement of the old eye-word, naming हृदय as the one word among them that never drifted at all.

13.1 हृदय (hṛdaya) — the word that never drifted

The face is complete: ḍoḷā, kān, tōḍ, nāk — and nāk was the one whose English cousin, **nose**, needed no qualification at all. One organ is left, and its history could not be more different from डोळा’s.

You’ll want to know: हृदय

हृदय — *hṛdaya* — **heart** (neuter)

The letters in this word

One new mark, thirteen chapters in: ृ, the **vocalic *r*** — a small hook below the consonant, standing for a syllabic *r* sound with no vowel written beside it. ह, द, य are all familiar. *Hṛ-da-ya*.

The word, taken apart — its roots and family

हृदय continues Sanskrit हृदय *hṛdaya* itself, unchanged in shape since this book’s earliest chapters were still explaining what a *halant* does. Its root is Indo-European **kērd-*, “heart” — and this is about as secure as a cognate gets: English **heart**, Latin **cor/cordis** (behind **cordial**), and Greek **kardia** (behind **cardiac**) are all the same word, diverging by ordinary sound change and nothing stranger.

Why it’s said this way

Set हृदय against the words this book has already taken apart. Chapter 8’s वाचणे drifted from *vac-*, “to speak,” into “to read” by way of a causative twist — reading as *making the text speak*. The same chapter’s समजणे drifted from *budh-*, “to wake,” into “to understand” — an idea arriving is a kind of waking up. This chapter’s own डोळा drifted furthest of all, from *dola*, “a swing,” into “eye,” pushing out the word it replaced. हृदय, by contrast, has drifted almost nowhere: no causative twist, no metaphor, no replacement — the same word, doing the same job, since before Sanskrit was written down.

Your turn

- *Say it:* **hṛdaya** — heart
- *Name:* three English words sharing its root — **heart**, **cordial**, **cardiac**
- *Say it:* all five body words this book has taught — **ḍoḷā**, **kān**, **tōḍ**, **nāk**, **hṛdaya**

Before you move on

Name three English words that share हृदय’s root. (**Heart**, **cordial**, **cardiac**.) What makes हृदय different from वाचणे, समजणे, and डोळा? (Those three **drifted** — speaking to reading, waking to understanding, swinging to eye; हृदय did not drift at all.) What new Devanagari mark did this lesson add? (ॠ, the vocalic *r*.)

Sources: Wiktionary: हृदय.

Devanagari for Marathi — a reference

Not to be read before the lessons — they teach reading through real words. This page gathers the system, and flags what is special about *Marathi's* Devanagari.

The three facts

1. **Consonants carry a built-in “a.”** क ka, न na, म ma.
2. **A vowel sign (*mātrā*) changes it:** का k̄a, कि k̄i, की k̄ī, कु ku, के ke, को ko, कौ kau.
3. **A *halant* removes it,** and the bare consonant joins the next as a conjunct: स् + का → स्का; न् + य → न्य. The *anusvāra* dot ँ nasalises a vowel (बरं *barṇ*).

What is special about Marathi's Devanagari

- **The extra letter ऌ (*ḷa*)** — a **retroflex l**, made with the tongue curled back. Hindi does *not* have it; Marathi shares it with the Dravidian languages to the south (Tamil *ḷ*, Kannada, etc.), a mark of centuries of contact. It appears in common words like *kāḷ* (“time”) and *phāḷ* (“fruit”).
- **The vowel अँ / ऐँ** for the English “a” of *cat* — added for English loanwords (*baṅk*, “bank”).
- **Three genders.** Marathi keeps Sanskrit's masculine, feminine, *and* neuter, where Hindi collapsed to two — and it marks gender on verbs and adjectives more thoroughly than Hindi.

Marathi in the family

Marathi is **Indo-Aryan** (like Hindi, Punjabi, Bengali — descended from Sanskrit), spoken in Maharashtra. Its Devanagari and much of its formal vocabulary are shared with Hindi and Sanskrit; its sound system, its extra letter $\overline{\text{अ}}$, and parts of its grammar bear the imprint of long contact with Dravidian. The lessons trace both threads.
