

Gujarati, Step by Step, Root by Root

An etymology-driven curriculum, built one word at a time

Adhithya Rajasekaran

This edition compiled incrementally — new chapters added as they
are written.

Preface

This book teaches Gujarati one word at a time, and it teaches each word by taking it apart. It is written for someone starting from zero — who may not read a single Gujarati letter — so the script is taught *inside the word lessons themselves*: each word introduces exactly the letters it needs, so you learn to read નમસ્તે *and* learn what it means in the same few minutes. (A reader who already reads Gujarati simply skims the “letters in this word” notes.)

Gujarati (*gujarātī*) is an **Indo-Aryan** language — a granddaughter of Sanskrit, like Hindi, Marathi, Punjabi, and Bengali — and the mother tongue of some sixty million people in Gujarat and across a famous global diaspora. It is the language of **Mahatma Gandhi**, who wrote his autobiography in it. Its script is Devanagari’s sister with one visible difference: it dropped the horizontal *top line*, so its letters float free — “the headless script.” Two threads run through the book: Gujarati’s Sanskrit inheritance (shared with Hindi), and the deep **Perso-Arabic** layer it took on as one of India’s great trading tongues (so “I’m well” is answered with the Persian *majā*, “relish”). Roots are traced to Sanskrit, to Persian/Arabic, and, where they reach, to the wider family that also gave English its words — every form supplied in full.

How to use this book

Every numbered section is one word, or one small phrase, and takes a few minutes — the length of a queue, an errand, or the walk to the bus. Read them in order the first time through: each section stands on the ones before it, and nothing is used before it has been taught. After that the book becomes reference, and you can open it anywhere.

Say the Gujarati out loud wherever you can. The prompts under *Your turn* are written to be spoken, and saying a word is most of what makes it stay. The questions under *Before you move on* carry their own answers in

brackets: cover them, answer from memory, then look.

Nothing here is gated behind the alphabet. Each lesson introduces exactly the letters and sounds its own word needs, so you are reading real words from the first page rather than drilling a chart. The whole script is gathered in a reference at the back of the book — somewhere to look things up when you are curious, never a chapter to sit through first.

Chapter 1

Greetings

Modes: 👁 eyes (6) ⇌ Hands-free start: none of the 6 lessons.

By the end of this chapter: I can greet someone in Gujarati, recognize the reply, and choose an appropriate response.

Complete GU-C01-practice, the canonical closing checkpoint, and demonstrate the chapter promise: greet someone in Gujarati, recognize the reply, and choose an appropriate response.

1.1 નમસ્તે (namaste) — “hello,” and a script with no ceiling

The first Gujarati word — and your first look at a script that is Devanagari’s sister, but bareheaded.

The letters in this word

(If you already read Gujarati, skim this.) Gujarati runs **left to right**, and every consonant carries a built-in “a”: ન na, મા ma, સા sa, તા ta. A *virama* strips the vowel so it joins the next as a conjunct: સ + ્ + ત → સ્ત. And the one thing to notice above all: Gujarati has **no top line**. Hindi, Marathi, and Bengali hang their letters from a horizontal bar (the *shirorekha*); Gujarati cut that bar away, so its letters float free. It is sometimes called “the headless script” — the quickest way to tell it from Devanagari at a glance.

The word, taken apart — its roots and family

નમસ્તે (*namaste*) is Sanskrit नमस् (*namas*, “a bow”) + ते (*te*, “to you”) — “**I bow to you**,” the very same word as in Hindi and Sanskrit. Gujarati is **Indo-Aryan**, a granddaughter of Sanskrit, so it inherited this greeting whole. (An even more common Gujarati hello, among Hindus, is કેમ છો? *kem chho?* — “how are you?” — which you will build in Chapter 3.)

Your turn

Say these aloud:

- “namaste”
- the one visible difference from Devanagari (no top line)
- its two parts (*namas* “a bow” + *te* “to you”)

Before you move on

What does *namaste* mean, and what marks Gujarati apart from Devanagari at a glance? (“I bow to you”; it has no top line — the “headless” script.)

1.2 આભાર (ābhār) — “thank you,” an obligation gladly owed

Gujarati’s everyday “thank you” — and it comes from the idea of being *indebted*.

The letters in this word

આ (the independent long *ā*, for a word-initial vowel) + ભ (bhā) + ર (*r*) → આભાર (*ābhār*). Note again: no top line.

The word, taken apart — its roots and family

આભાર (*ābhār*, “thanks, gratitude”) is from Sanskrit આભાર (ābhāra, “a burden, an obligation”), from આ- (*ā-*, “toward”) + the root ભ્ર (bhr, “to bear, carry”). To thank someone is to acknowledge you now *bear*

an obligation to them — the same idea as English **oblige** (Latin *ob-* + *ligāre* “to bind”) and Portuguese *obrigado*. That root *bhr* is Proto-Indo-European ***b^her-**, the ancestor of English **bear** (to carry) and Latin *ferre*. (The more Sanskritic धन्यवाद *dhanyavād* is also used, but *ābhār* is the warm, everyday Gujarati word.)

Your turn

Say these aloud:

- “ābhār”
- what it literally acknowledges (an obligation “borne”)
- the English cousin of its root *bhr* (**bear**, “to carry”)

Before you move on

What does *ābhār* literally mean, and what English word shares its root? (“An obligation borne”; **bear** — from PIE **b^her-*, “to carry.”)

1.3 આવજો (āvjo) — “goodbye” (come again)

The everyday Gujarati goodbye — and, like the goodbyes across all of India, it is really an invitation to return.

The letters in this word

અ (independent *ā*) + વ (va) + જો (jo) → આવજો (āvjo).

The word, taken apart — its roots and family

આવજો (āvjo) is the polite imperative of આવજું (āvṇũ, “to come”) — literally “[please] come [again].” A Gujarati never signs off by saying “I’m leaving”; the parting word is *come*. It is the same “promise of return” that runs through the whole subcontinent — Tamil *pōy varugirēn* (“I’ll go and come back”), Bengali *āshi* (“I’ll come”), Hindi *phir milenge* (“we’ll meet again”) — here made into a single warm word built on the verb *to come*. (To one person, familiarly: આવજે *āvje*.)

Your turn

Say these aloud:

- “āvjo”
- what it literally means (“[please] come [again]”)
- the verb it’s built on (*āvṽṽ*, “to come”)

Before you move on

What does the Gujarati goodbye literally say, and what verb is it from? (“Come [again]”; *āvṽṽ*, “to come” — never “I’m leaving.”)

1.4 હા / ના (hā / nā) — “yes” and “no”

Two tiny words no conversation survives without — and one is a cousin of English.

The letters in this word

હા (*hā*) = હ (*ha*) + the long-*ā* sign. ના (*nā*) = ન (*na*) + the long-*ā* sign.

The word, taken apart — its roots and family

હા (*hā*, “yes”) and ના (*nā*, “no”). The “no” rides the ancient negative **na-** — the very same Proto-Indo-European ***ne** behind English **no**, **not**, **none**, Latin *nōn*, Hindi *nahīn*, and Bengali *nā*. Of all the words in this book, this “no” reaches furthest unchanged: one syllable spoken, in some form, from Iceland to Gujarat for five thousand years.

Your turn

Say these aloud:

- “hā” (yes) and “nā” (no)
- the shared ancestor of *nā* and English *no* (PIE **ne*)

Before you move on

What ancient root links Gujarati *nā* to English *no*? (Proto-Indo-European **ne*, “not.”)

1.5 સારું (sārū) — “good,” “okay”

The all-purpose “good / fine / okay / alright” — and your first taste of Gujarati’s three genders.

The letters in this word

સ (sā) + રું (rū, with the nasal *anusvāra* on the *u*) → સારું (sārū).

The word, taken apart — its roots and family

સારું (sārū, “good, fine, okay”) is from Sanskrit સાર (sāra, “essence, substance, the best part”) — the same *sāra* behind Bengali’s *sāramilla* (“no matter”). As “okay/agreed” it oils every Gujarati conversation, the way English uses “alright.”

Grammar Lens: three genders, on the adjective

Look at that ending -રું (-rū). Gujarati, like Marathi, keeps **three** genders from Sanskrit — masculine, feminine, **and neuter** — where Hindi and Punjabi kept only two. An adjective agrees with its noun in all three:

- સારો (sāro) — masculine
- સારી (sārī) — feminine
- સારું (sārū) — **neuter**

Standing alone as “okay,” it takes the neuter *sārū*. You will meet this three-way agreement on every adjective and possessive.

Your turn

Say these aloud:

- “sārū” — good / okay

- the three genders — *sāro* (m.) / *sārī* (f.) / *sārũ* (n.)
- the Sanskrit root (*sāra*, “essence”)

Before you move on

What does *sārũ* mean, and what does its *-ũ* ending tell you?
 (“Good / okay”; it is the **neuter** — Gujarati keeps three genders.)

1.6 Chapter 1 — The greetings

No new words. The five greetings, mixed and recombined.

How to answer — rapid recall

Say these aloud:

- hello / goodbye — *namaste*
- thank you — *ābhār*
- yes and no — *hā* / *nā*
- good / okay — *sārũ*
- the “come again” goodbye — *āvjo*

Script — the script and the language

Say these aloud:

- the one visible thing that sets Gujarati apart from Devanagari (no top line)
- how many genders Gujarati keeps (three — *sāro/sārī/sārũ*)

What you’ve built — roots you now carry

- *namaste* = *namas* “a bow” + *te* “to you”
- *ābhār* ← *ā* + *bhṛ* “to bear” → an obligation borne (cousin of English *bear*)
- *nā* (“no”) ← PIE **ne* → English *no/not/none*

- *āvjo* (“goodbye”) = “come [again],” from *āvvũ* “to come”

Before you move on

Someone thanks you and turns to leave. Answer their thanks and send them off the Gujarati way. (*Sārũ* — and *āvjo*, “come again.”)

Chapter 2

Introducing Yourself

Modes: 🗣️ voice (3) 👁️ eyes (6) 🖐️ Hands-free start: all 9 lessons.

By the end of this chapter: I can introduce myself in Gujarati, give my name, and understand the other person’s name.

Complete GU-C02-practice, the canonical closing checkpoint, and demonstrate the chapter promise: introduce myself in Gujarati, give my name, and understand the other person’s name.

2.1 નામ (nām) — “name,” a word older than Europe

The first word of the introduction — and a bridge between India and Europe.

The letters in this word

ના (na) + મા (long ā) + મ (ma) → નામ (nām).

The word, taken apart — its roots and family

નામ (nām, “name”) ← Sanskrit નામન (nāman), from Proto-Indo-European *h₃nómn (its final *n* syllabic) — the same root as English **name**, Latin *nōmen* (→ **noun**), Greek *onoma*, and Hindi *nām*. Gujarati *nām* and English *name* are cousins from before either language existed.

Your turn

Say these aloud:

- “nām”
- the family — *nām* / English *name* / Latin *nōmen*

Before you move on

What root is *nām* from, and its English cousin? (Sanskrit *nāman* / PIE **h₃no^mn*; English **name**.)

2.2 મારું (mārũ) — “my,” and gender again

The word that makes the name yours — and, like *sārũ*, it changes with gender.

The letters in this word

મા (*mā*) + રું (*rũ*, with the nasal) → મારું (*mārũ*).

The word, taken apart — its roots and family

મારું (*mārũ*, “my”) is on the first-person root **ma-** — the same *ma-/me-* behind English **me**, **my**, **mine**, Latin *meus*, and Hindi *merā*. Gujarati’s “my” and English’s “my” are, at the root, one word.

Grammar Lens: “my” agrees in all three genders

Because *nām* (“name”) is **neuter**, “my name” is મારું નામ (*mārũ nām*) — the neuter *mārũ*. The full set:

- મારો (*māro*) — masculine (e.g. *māro dēsh*, “my country”)
- મારી (*mārī*) — feminine (e.g. *mārī bhāṣā*, “my language”)
- મારું (*mārũ*) — **neuter** (e.g. *mārũ nām*, “my name”)

Every possessive works this way — three forms, chosen by the noun’s gender. It is the thread you first pulled in Chapter 1’s *sārũ*.

Your turn

Say these aloud:

- the three — *māro* (m.) / *mārī* (f.) / *mārũ* (n.)
- “my name” and why (*mārũ nām* — *nām* is neuter)
- the m- family (*mārũ*, English *me, my*)

Before you move on

Which form of “my” goes with *nām*, and why? (*Mārũ* — the neuter, because *nām* is a neuter noun.)

2.3 ઇ (chhe) — “is,” a copula all Gujarati’s own

The little verb “is” — and here it is a word you will *not* recognise from Hindi.

The letters in this word

છ (chha, a breathy *ch*) + ે (the *e*-sign) → ઇ (chhe). One syllable.

The word, taken apart — its roots and family

ઇ (chhe, “is”) is Gujarati’s **copula** — and, unusually, it is *not* the *hai* of Hindi or the *asti* of Sanskrit. It grew from an Old Gujarati form (*achhai*) along its own path, so it is one of the words that most quickly marks a sentence as *Gujarati* rather than Hindi. Its forms run: હું છું (*hũ chhũ*, “I am”), તું છે (*tũ chhe*, “you are”), તે છે (*te chhe*, “he/she/it is”), તમે છો (*tame chho*, “you are,” respectful).

Grammar Lens: the verb goes last

Gujarati is **subject–object–verb**, like all its Indo-Aryan sisters: “my name Arun **is**.” *Chhe* sits at the end of the sentence, where English puts “is” in the middle.

Your turn

Say these aloud:

- “chhe”
- the copula set — *hũ chhũ* (I am), *tame chho* (you are), *te chhe* (is)
- what makes *chhe* special (it’s Gujarati’s own, not Hindi’s *hai*)

Before you move on

What is *chhe*, and how does it differ from Hindi? (Gujarati’s copula, “is”; it is not Hindi’s *hai* — a distinctively Gujarati word.)

2.4 મારું નામ ... છે (mārũ nām ... chhe) — “my name is...”

Three atoms you now own, assembled into a first sentence.

The two words — assembled

મારું (my, neuter) + નામ (name) + your name + છે (is) = **mārũ nām ... chhe**, “my name is...” *Mārũ nām Arun chhe.* → “My name is Arun.”

Grammar Lens: the verb goes last

Gujarati keeps the verb at the **end** — “my name Arun **is**.” Note too that *mārũ* is neuter to agree with *nām* (neuter): the agreement you learned two lessons ago is already doing its quiet work.

Your turn

Say these aloud:

- “mārũ nām ... chhe” with your name
- why *mārũ* (neuter) and where *chhe* sits (agrees with *nām*; verb last)

Before you move on

Give your name in Gujarati, and say where the verb goes. (*Mārũ nām ... chhe*; the verb *chhe* is last.)

2.5 તમને મળીને આનંદ થયો (tamne maḷīne ānand thayo) — “pleased to meet you”

The warm close of an introduction — a word that means bliss itself.

The letters in this word

The key word is આનંદ (*ānand*): આ + ન + ં (the nasal) + દ (*da*).

The word, taken apart — its roots and family

તમને મળીને આનંદ થયો = તમને (*tamne*, “to you”) + મળીને (*maḷīne*, “having met”) + આનંદ થયો (*ānand thayo*, “joy happened”) — literally “**having met you, joy happened.**” The key word આનંદ (*ānand*, “joy, bliss”) is **Sanskrit** — *ā-* (“fully”) + *nand* (“to rejoice”) — the *ānanda* of *sat-cit-ānanda* (“being-consciousness-bliss”), and a common Gujarati name. So a simple greeting reaches, as Sanskrit did, for the word for the deepest happiness.

Your turn

Say these aloud:

- “tamne maḷīne ānand thayo”
- the key word and its meaning (*ānand*, “joy/bliss”)
- what it’s built from (*ā-* “fully” + *nand* “to rejoice”)

Before you move on

What does the phrase literally say, and what is *ānand*? (“Having met you, joy happened”; Sanskrit *ānanda*, “bliss.”)

2.6 તું / તમે (tũ / tame) — “you,” familiar and respectful

To ask a name you need “you” — and Gujarati grades respect the way French does.

The letters in this word

તું (tũ): ત (ta) + the *u*-sign + nasal. તમે (tame): ત + મ + ે.

The word, taken apart — its roots and family

તું (tũ, familiar “you”) ← Sanskrit *tvam*, from PIE **tũ* — the same root as English archaic **thou**, Latin *tũ*, French *tu*, and Hindi *tũ*. તમે (tame, respectful “you”) is grammatically plural — courtesy-by-plural, like French *vous* and Hindi *ap*. For a first meeting, use તમે; it takes the plural copula *chho* (tame ... *chho*).

Your turn

Say these aloud:

- “tũ” (familiar) and “tame” (respectful)
- the English cousin of *tũ* (**thou**)
- which you use on first meeting (*tame*)

Before you move on

Which “you” is respectful, and what English word is *tũ* cousin to? (*Tame*; archaic **thou**, from PIE **tũ*.)

2.7 શું (shũ) — “what”

The question-word — and the one Gujarati question that does *not* start with *k*-.

The letters in this word

શ (sha) + the *u*-sign + nasal → શું (shũ).

The word, taken apart — its roots and family

શું (*shũ*, “what”) descends, by a winding road, from the Sanskrit interrogative stem **ક-** (*ka-*, PIE ***k^wo-**) — the root behind English **what**, Latin *quis*, and Hindi *kyā*. Most of Gujarati’s questions still show that **k-** plainly — કેમ (*kem*, how), કોણ (*kōṇ*, who), ક્યાં (*kyā*, where), ક્યારે (*kyāre*, when) — but “what” wore down into this *sh-* form. So *shũ* is the odd cousin in a *k-* family.

Your turn

Say these aloud:

- “shũ”
- the *k-* question family it belongs to (*kem*, *kōṇ*, *kyā*, *kyāre*)
- its distant English cousin (*what*)

Before you move on

What does *shũ* mean, and what root does it share with English *what*? (“What”; the interrogative *ka-* / PIE ***k^wo-** — worn to *sh-* in Gujarati.)

2.8 તમારું નામ શું છે? (*tamārũ nām shũ chhe?*) — “what’s your name?”

Turn the introduction around — ask, instead of tell.

The two words — assembled

તમારું (*tamārũ*, “your,” the respectful possessive from *tame*, neuter to match *nām*) + નામ (name) + શું (what) + છે (is) → literally “**your name what is?**” Gujarati keeps the verb last and drops the question-word *shũ* into the object slot.

Grammar Lens: answering, and the familiar form

Answer with the sentence you built: *Mārũ nām Arun chhe*. The familiar version swaps *tamārũ* for તારું (*tārũ*, “your,” from *tũ*): *tārũ*

nām shũ chhe? Note *mārũ* / *tārũ* / *tamārũ* — “my / your / your (resp.)” — all take the neuter *-ũ* before *nām*.

Your turn

Say these aloud:

- the respectful question — *tamārũ nām shũ chhe?*
- answer it — *mārũ nām ... chhe*
- the familiar “your” (*tārũ*)

Before you move on

Ask “what’s your name?” respectfully. (*Tamārũ nām shũ chhe?*; the verb *chhe* is last.)

2.9 Chapter 2 — The introduction exchange

No new words. The whole introduction, assembled from atoms you now own.

The exchange

Say these aloud:

- “My name is Mira.” — *mārũ nām Mira chhe.*
- “What’s your name?” — *tamārũ nām shũ chhe?*
- “My name is Arun.” — *mārũ nām Arun chhe.*
- “Pleased to meet you.” — *tamne maļĩne ānand thayo.*

The word, taken apart — its roots and family

Say these aloud:

- “name,” “my,” “is” (*nām*, *mārũ*, *chhe*)
- the two “you” levels (*tũ* / *tame*)

- “what,” and where the verb sits (*shũ*; the verb is last)

What you’ve built — roots you now carry

- *nām* ← Sanskrit *nāman* → English **name**
- *mārũ* ← *ma-* → English **my**; agrees in three genders (*māro*/*mārī*/*mārũ*)
- *chhe* — Gujarati’s own copula (not Hindi’s *hai*)
- *shũ* ← *ka-* → English *what*; *tũ* ← **tũ* → *thou*

Before you move on

Introduce yourself and ask a stranger’s name in Gujarati. (*Mārũ nām ... chhe. Tamārũ nām shũ chhe?*)

Chapter 3

How Are You?

Modes: ⇐ voice (2) ⇐ eyes (4) ⇐ Hands-free start: all 6 lessons.

By the end of this chapter: I can ask how someone is in Gujarati, answer naturally, and return the question.

Complete GU-C03-practice, the canonical closing checkpoint, and demonstrate the chapter promise: ask how someone is in Gujarati, answer naturally, and return the question.

3.1 હું (hũ) — “I”

To answer “how are you?” you first need “I.” In Chapter 2 you learned *mārũ* (“my”); here is its owner.

The letters in this word

હ (ha) + the *u*-sign + nasal → હું (hũ). One nasal syllable.

The word, taken apart — its roots and family

હું (hũ, “I”) descends from Sanskrit अहम् (*aham*, “I”), worn down through Old Gujarati (*haũ*) to *hũ*. That *aham* is from Proto-Indo-European ***h₁eǵ(H)om** — the ancestor of Latin **ego** and English **I**. So Gujarati’s *hũ*, Latin *ego*, and English *I* are one ancient word. Its possessive is the મારું (*mārũ*, “my”) from Chapter 2.

Grammar Lens: “I” plus the copula

Hũ takes the copula **છ** (*chhũ*, “am”): *hũ ... chhũ*. So the answer to *tame kem chho?* begins **છ** (*hũ ...*).

Your turn

Say these aloud:

- “hũ”
- the family — *hũ* / Latin *ego* / English **I**
- “hũ ... chhũ” — I am ...

Before you move on

What Sanskrit word is *hũ* from, and its cousins? (*Aham*; Latin *ego*, English **I**.)

3.2 ક્રેમ (kem) — “how,” a proper k- question

Where *shũ* (“what”) hid its k-, this one wears it plainly — and it opens the most Gujarati of greetings.

The letters in this word

ક (*ka*) + **ે** (the *e*-sign) + **મ** (*ma*) → **ક્રેમ** (*kem*).

The word, taken apart — its roots and family

ક્રેમ (*kem*, “how”; also “why”) is from the interrogative stem **ક્ર-** (*ka-*), PIE ***k^wo-** — the same root behind English **wh-** and Latin *qu-*. It heads the plain *k-* family Gujarati mostly kept: *kem* (how), *kōṇ* (who), *kyā* (where), *kyāre* (when). And **ક્રેમ છો?** (*kem chho?*, “how are you?”) is, for most Gujaratis, the real everyday hello — warmer than *namaste*.

Your turn

Say these aloud:

- “kem”

- the k- question family — *kem*, *kōṇ*, *kyā*, *kyāre*

Before you move on

What root does *kem* share with English *how/what*? (The interrogative *ka-*, PIE **k^wo-*.)

3.3 તમે કેમ છો? (*tame kem chho?*) — “how are you?”

The greeting most Gujaratis actually use — three words you already own.

The word, taken apart — its roots and family

તમે કેમ છો? = તમે (*tame*, respectful “you”) + કેમ (*kem*, “how”) + છો (*chho*, “are”) — literally “**you how are?**”, the verb last. *Chho* is the respectful/plural form of the copula *chhe* you met in Chapter 2 (*hū chhū* I am / *tame chho* you are). To a friend (*tũ*): તું કેમ છે? (*tũ kem chhe?*).

Grammar Lens: match the “you” to the copula

- Respectful: તમે કેમ છો? (*tame ... chho*)
- Familiar: તું કેમ છે? (*tũ ... chhe*)

Same pattern as every Indo-Aryan track: the “you” and its verb-form travel together.

Your turn

Say these aloud:

- the respectful greeting — *tame kem chho?*
- the familiar version — *tũ kem chhe?*
- where the verb sits (at the end)

Before you move on

Give the everyday Gujarati “how are you?”, and its copula form.
(*Tame kem chho?*; *chho* — the respectful form of *chhe*.)

3.4 મજા (majā) — “enjoyment,” and how to answer

The word that answers “how are you?” — and it comes not from Sanskrit but from Persia.

The letters in this word

મ (*ma*) + જા (*jā*) → મજા (*majā*).

The word, taken apart — its roots and family

મજા (*majā*, “enjoyment, fun, relish, pleasure”) is **not** Sanskrit — it is **Perso-Arabic**, from Persian **maza** (“taste, relish”). Gujaratis, a great trading people, wove thousands of Persian and Arabic words into their speech over centuries of commerce across the Arabian Sea — and even “how are you” is answered with one. To say “**I’m well**,” Gujarati says હું મજામાં છું (*hũ majāmā chhũ*) — literally “**I am in enjoyment**” (*majā* + *-mā* “in” + *chhũ* “am”).

The exchange — the reply

— *tame kem chho?* (“How are you?”) — *majāmā, ābhār*. (“Well [lit. ‘in enjoyment’], thank you.”)

Your turn

Say these aloud:

- “majā”
- the full reply — *hũ majāmā chhũ*
- which heritage *majā* belongs to (Persian, not Sanskrit)

Before you move on

How does Gujarati say “I’m well,” and where does *majā* come from? (*Hũ majāmā chhũ*, “I’m in enjoyment”; Persian *maza*, “taste/relish.”)

3.5 વાંધો નહીં (vāndho nahī) — “no problem”

When someone thanks you — or apologises — this is the easy, gracious reply.

The letters in this word

વાંધો (*vāndho*, “objection, problem” — with the nasal on વાં) + નહીં (*nahī*, “not”) → *vāndho nahī*.

The word, taken apart — its roots and family

વાંધો નહીં literally means “[there is] **no objection**” — *vāndho* (“objection, difficulty, harm”) + નહીં (*nahī*, “not / no”). It serves as “it’s okay / no worries / no problem / you’re welcome.” The negative નહીં (*nahī*) is the fuller form of the ના (*nā*) you met in Chapter 1 — both from the ancient **na-**, Proto-Indo-European ***ne**, behind English **no**, **not**, and Hindi *nahī*.

Your turn

Say these aloud:

- “vāndho nahī”
- what it literally means (“no objection”)
- the exchange — *ābhār* / *vāndho nahī*

Before you move on

What does *vāndho nahī* literally say, and what ancient root is its *nahī* from? (“No objection”; PIE ***ne** — English *no/not*.)

3.6 Chapter 3 — The how-are-you exchange

No new words. The whole responding cycle, from atoms you now own.

The exchange

Say these aloud:

- “How are you?” (the everyday hello) — *tame kem chho?*
- “I’m well, thank you.” — *hũ majāmā chhũ, ābhār.*
- “No problem / you’re welcome.” — *vāndho nahĩ.*
- the familiar question — *tũ kem chhe?*

The word, taken apart — its roots and family

Say these aloud:

- the k- question-word for “how” (*kem*)
- “I” and its copula (*hũ, chhũ*)
- which of your words is Persian, not Sanskrit (*majā*)

What you’ve built — roots you now carry

- *kem* ← the interrogative *k-* (PIE **k^wo-*), cousin of English *how/what*
- *hũ* ← Sanskrit *aham* → Latin *ego*, English **I**
- *majā* ← **Persian** *maza*, “taste/relish” — the trade-language layer
- *nahĩ* ← PIE **ne*, English *no* (in *vāndho nahĩ*)

Before you move on

Someone greets you with *tame kem chho?* — reply that you’re well and thank them. (*Hũ majāmā chhũ, ābhār* — and to their thanks, *vāndho nahĩ.*)

Chapter 4

Farewells

Modes: ⇐ voice (2) ⇐ eyes (3) ⇐ Hands-free start: all 5 lessons.

By the end of this chapter: I can end a Gujarati conversation politely and choose a farewell that fits the situation.

Complete GU-C04-practice, the canonical closing checkpoint, and demonstrate the chapter promise: end a Gujarati conversation politely and choose a farewell that fits the situation.

4.1 મળીશું (maḷīshū) — “(we) will meet”

A future-tense verb — the other half of “see you again.”

The letters in this word

મ (ma) + ૐ (l̄, with the retroflex ૐ l) + શું (shū) → મળીશું (maḷīshū).

The word, taken apart — its roots and family

મળીશું (maḷīshū, “we will meet”) is the future of મળવું (maḷvũ, “to meet”), from Sanskrit મિલ્ (mil-, “to join, unite”) — the same root as Hindi *mīlnā* and Punjabi *mīlṇā*. Note the retroflex ૐ (l): Gujarati keeps this extra letter — like Marathi and the Dravidian south, and unlike Hindi. The ending -શું (-shū) is the “we will” future.

Grammar Lens: the future is an ending

Gujarati marks the future with an ending on the stem: maḷ- (“meet”) + -īshū (“we will”) → maḷīshū. No helper-word like English “will.”

Your turn

Say these aloud:

- “maḷishū”
- the verb it’s from (*maḷvũ*, “to meet,” ← Sanskrit *mīl-*)
- the extra letter it shows (retroflex 𑂣, *ḷ*)

Before you move on

What verb is *maḷishū* from, and what special letter does it use? (*Maḷvũ* “to meet”; the retroflex 𑂣 *ḷ*, which Hindi lacks.)

4.2 𑂔𑂗𑂢𑂰𑂔𑂱 (kāle maḷishū) — “see you tomorrow”

A goodbye for tomorrow — built on a word that means both **tomorrow** and **yesterday**.

The letters in this word

𑂔𑂰 (*kā*) + 𑂗𑂢𑂰 (*le*) → 𑂔𑂗𑂢𑂰 (*kāle*, “on [the] *kāl*”). The base is 𑂔𑂰 (*kāl*).

The word, taken apart — its roots and family

𑂔𑂰 (*kāl*) means **both “tomorrow” and “yesterday”** — the day on either side of today — from Sanskrit 𑂔𑂰 (*kāla*, “time”). (It is the very same *kāla* behind Hindi’s *kal*, Bengali’s *kāl*, and Punjabi’s *akāl* “timeless.”) The verb’s tense tells which: *kāle maḷishū* (future → “**tomorrow** we’ll meet”), *kāle maḷyā* (past → “we met **yesterday**”). So 𑂔𑂗𑂢𑂰 = “tomorrow we’ll meet” = “see you tomorrow.”

Your turn

Say these aloud:

- “kāle maḷishū”
- the puzzle — *kāl* means both **tomorrow** and **yesterday**
- the root and its cousins (*kāla* “time”; Hindi *kal*, Punjabi *akāl*)

Before you move on

What two opposite days does *kāl* mean, and what tells them apart?
(Both tomorrow and yesterday; the verb's tense.)

4.3 પાછા (pāchhā) — “again, back”

One small word turns a goodbye into “**till next time.**” You already have the other half — *āvjo* (“come again”) — from Chapter 1.

The letters in this word

પા (pā) + છા (chhā) → પાછા (pāchhā).

The word, taken apart — its roots and family

પાછા (pāchhā, “back, again, returning”) is from Sanskrit પાશ્વ (paścāt, “behind, afterward”) — the same “behind/after” root behind English *post-* words, distantly. It carries the sense of *return*: *pāchhā āvvũ* (“to come back”), *pāchhā jāvvũ* (“to go back”). Add it to “we’ll meet” and you get the warm goodbye of the next lesson.

Your turn

Say these aloud:

- “pāchhā”
- what it adds to a goodbye (“again / back”)

Before you move on

What does *pāchhā* mean, and what sense does it carry? (“Back / again”; the sense of return — *pāchhā āvvũ*, “to come back.”)

4.4 પાછા મળીશું (pāchhā maḷīshũ) — “we’ll meet again”

The warm, explicit goodbye — the companion of Chapter 1’s *āvjo*.

The word, taken apart — its roots and family

পাછা মলিশুঁ = পাছা (*pāchhā*, “again”) + মলিশুঁ (*maḷishũ*, “we will meet”) — “**we’ll meet again.**” Where Chapter 1’s আবেজো (*āvjo*) is the quick, warm “come again,” *pāchhā maḷishũ* spells out the promise: we will meet once more. It is the same “promise of return” the whole subcontinent prefers (Hindi *phir milenge*, Bengali *āshi*, Tamil *pōy varugirēn*).

Your turn

Say these aloud:

- the warm goodbye — *pāchhā maḷishũ*
- the two words it’s built from (*pāchhā* + *maḷishũ*)
- the Chapter-1 goodbye it partners (*āvjo*)

Before you move on

What does *pāchhā maḷishũ* literally say, and how does it relate to *āvjo*? (“We’ll meet again”; it’s the explicit form of Ch.1’s “come again” goodbye.)

4.5 Chapter 4 — The farewells

No new words. Three ways to part — none of them a blunt “goodbye.”

Why it’s said this way

Say these aloud:

- the quick “come again” (Chapter 1) — *āvjo*
- the explicit “we’ll meet again” — *pāchhā maḷishũ*
- “see you tomorrow” — *kāle maḷishũ*

The word, taken apart — its roots and family

Say these aloud:

- “again” and “(we) will meet” (*pāchhā*, *maḷishū*)
- the word that means BOTH tomorrow and yesterday (*kāl*)
- the retroflex letter in *maḷishū* (ॠ, ॡ)

What you’ve built — roots you now carry

- *āvjo* (“goodbye”) = “come [again],” from *āvṽ* “to come”
- *maḷishū* ← *maḷvū* “to meet” (Sanskrit *mīl-*); the retroflex ॠ
- *kāl* ← *kāla* “time” (Hindi *kal*, Punjabi *akāl*)

Before you move on

You’re leaving a friend and will see them tomorrow. Give the goodbye and the “tomorrow” version. (*Āvjo* — and *kāle maḷishū*.)

Chapter 5

The First Verbs

Modes: ⇄ voice (1) 👁 eyes (4) ⇄ Hands-free start: all 5 lessons.

By the end of this chapter: I can build short present-tense Gujarati sentences with the chapter’s first verbs.

Complete GU-C05-practice, the canonical closing checkpoint, and demonstrate the chapter promise: build short present-tense Gujarati sentences with the chapter’s first verbs.

5.1 બોલવું (bolvũ) — “to speak,” your first full verb

So far, “to be.” Here is a verb that *does* something — in a shape you’ll see on every Gujarati verb.

The letters in this word

બો (bo) + લ (la) + વું (vũ, with the nasal) → બોલવું (bolvũ).

The word, taken apart — its roots and family

બોલવું (bolvũ, “to speak”) is a native Indo-Aryan verb (the same *bol-* as Hindi *bolnā* and Punjabi *bolṇā*). Its ending -વું (-vũ) is Gujarati’s infinitive marker — the “to _____” form: *bol-vũ* “to speak,” *maḷ-vũ* “to meet” (from *maḷishũ*), *āv-vũ* “to come” (behind *āvjo*). Strip the -vũ and you have the **stem** (*bol-*).

Grammar Lens: stem + person + copula

To say “I speak,” Gujarati adds a person-ending to the stem and follows it with the copula:

- *hũ bolũ chhũ* — I speak
- *tũ bole chhe* — you speak (familiar)
- *tame bolo chho* — you speak (respectful)
- *te bole chhe* — he/she speaks

The simple present is the same for a man or a woman — Gujarati saves its **three genders** for adjectives and the past tense, not the plain present.

Your turn

Say these aloud:

- “bolvũ”
- the infinitive ending every Gujarati verb takes (*-vũ*)
- “I speak” — *hũ bolũ chhũ*

Before you move on

What ending marks a Gujarati infinitive, and how do you say “I speak”? (*-vũ*; *hũ bolũ chhũ*.)

5.2 હું ગુજરાતી બોલું છું (*hũ gujarātī bolũ chhũ*) — “I speak Gujarati”

Your first complete, moving sentence — and the language names itself after a people who arrived on horseback.

The letters in this word

ગુજરાતી (*gujarātī*): ગુ (*gu*) + જ (*ja*) + રા (*rā*) + તી (*tī*).

The word, taken apart — its roots and family

હું ગુજરાતી બોલું છું = હું (*hũ*, “I”) + ગુજરાતી (*gujarātī*, the object) + બોલું છું (*bolũ chhũ*, “speak”) — “I Gujarati speak,” verb last. The name ગુજરાત (*Gujarāt*) comes from the **Gurjar** — a people who entered western India around the 6th–8th centuries and gave their name to the land (*Gurjara-deśa* → *Gujarāt*); *gujarātī* is “[the language] of Gujarat.” So the language is named after a people, and the region after them in turn.

Grammar Lens: no gender in the plain present

Bolũ chhũ is the same whether a man or a woman says it — Gujarati’s **three genders** live in its adjectives (*sāro/sārī/sārũ*) and its past tense, but the simple present “I speak” is gender-free. And because *chhũ* already carries “I,” you could drop *hũ*: *gujarātī bolũ chhũ*.

Your turn

Say these aloud:

- “*hũ gujarātī bolũ chhũ*”
- what *Gujarāt* is named after (the *Gurjar* people)
- does “I speak” change for a man vs. a woman? (No — not in the plain present)

Before you move on

Say “I speak Gujarati,” and give the origin of the name. (*Hũ gujarātī bolũ chhũ*; from the *Gurjar* people, who named the land Gujarat.)

5.3 કામ કરવું (*kām karvũ*) — “to work”

The last verb of the chapter — from the single most productive root in the whole family, one you have met before.

The letters in this word

𑖦𑖩𑖪 (*kām*, “work”): 𑖦 (*kā*) + 𑖩 (*ma*). 𑖦𑖪𑖪 (*karvũ*, “to do”): 𑖦 (*ka*) + 𑖪 (*ra*) + 𑖪 (*vũ*).

The word, taken apart — its roots and family

𑖦𑖪𑖪 (*karvũ*, “to do, to make”) is from Sanskrit $\sqrt{\text{kr}}$ ($\sqrt{\text{kr}}$, “to do”), from PIE $*\text{k}^w\text{er-}$ — one of Sanskrit’s most productive roots, met in *namaskār* (“the **making** of a bow”) and *karma* (“a thing **done**”). And 𑖦𑖩𑖪 (*kām*, “work”) is itself from Sanskrit *karma* — so “work-do” is, at root, “*kr*-thing *kr*-do.” Like Hindi, Gujarati builds compound verbs as **noun** + 𑖦𑖪𑖪:

- 𑖦𑖩𑖪 𑖦𑖪𑖪 (*kām karvũ*) = “work-do” = “**to work**”
- 𑖪𑖪𑖪 𑖦𑖪𑖪 (*vāt karvũ*) = “to converse” (*vāt*, “talk”)

So *hũ kām karũ chhũ* = “I work.” Learn *karvũ* and a whole grammar of “do-verbs” opens up — the same one behind Hindi’s *kām karnā* and Bengali’s *kāj karā*.

Your turn

Say these aloud:

- “kām karvũ” (to work)
- “I work” — *hũ kām karũ chhũ*
- the Chapter-1 word that shares its root (*namaskār*-style — actually *ābhār*? no; recall *karma*, from *kr*)

Before you move on

What Sanskrit root is *karvũ* from, and what is *kām* (“work”) from? ($\sqrt{\text{kr}}$, “to do”; *kām* ← Sanskrit *karma* — both from *kr*.)

5.4 𑖪𑖪𑖪𑖪 (*rahevũ*) — “to live, to stay”

A second verb, so you can say where you live.

The letters in this word

ર (ra) + હે (he) + વૃ (vũ) → રહેવૃ (rahevũ). The familiar -vũ infinitive.

The word, taken apart — its roots and family

રહેવૃ (rahevũ, “to live, to remain, to stay”) is from Sanskrit રહ (rah-, “to remain”) — the same root as Hindi *rahnā* and Punjabi *rahiṇā*. “I live in Ahmedabad” is હું અમદાવાદમાં રહું છું (*hũ Amdāvādmā rahũ chhũ*) — stem *rah-* + person + copula, exactly like *bolvũ*.

Grammar Lens: “in” comes after the noun

અમદાવાદમાં (*Amdāvādmā*) = *Ahmedabad* + -માં (-mā, “in”), glued to the **end** of the noun. Gujarati, like Hindi, uses **postpositions** where English uses prepositions: “Ahmedabad-in I live,” the verb last.

Your turn

Say these aloud:

- “rahevũ”
- “I live in Ahmedabad” — *hũ Amdāvādmā rahũ chhũ*
- where “in” (-mā) sits — glued to the end of the noun

Before you move on

What root is *rahevũ* from, and where does “in” go? (Sanskrit *rah-* “to remain”; -mā “in” attaches to the **end** of the noun.)

5.5 Chapter 5 — The first verbs

No new words. Three verbs, one engine — build real sentences about yourself.

How to answer — build the sentences

Say these aloud:

- “I speak Gujarati” — *hũ gujarātī bolũ chhũ*

- “I live in Ahmedabad” — *hũ Amdāvādmā rahũ chhũ*
- “I work” — *hũ kām karũ chhũ*
- “you (resp.) speak Gujarati” — *tame gujarātī bolo chho*

Grammar lens — the engine

Say these aloud:

- the ending every infinitive carries (-*vũ*)
- the shape of the present (stem + person + the copula *chhũ/chhe/chho*)
- where the verb sits, and where “in” sits (verb last; -*mā* after the noun)

What you’ve built — roots you now carry

- *bolvũ* “to speak” (native; *bol-*, like Hindi/Punjabi)
- *rahevũ* “to live” ← *rah-* “to remain”
- *karvũ* “to do” ← *√kr*; *kām* “work” ← *karma* (both from *kr*)
- *gujarātī* ← the *Gurjar* people, who named the land Gujarat

Before you move on

In one breath, tell me your language, your city, and your work in Gujarati. (*Hũ gujarātī bolũ chhũ. Hũ ... rahũ chhũ. Hũ kām karũ chhũ.*)

Chapter 6

Numbers One to Five

Modes: ⇄ voice (2) ⇄ Hands-free start: all 2 lessons.

By the end of this chapter: I can count from one to five in headless Gujarati script and explain why બે starts with b where its neighbours start with d, and why ત્રણ has an r that Hindi tīn does not.

Take the two odd numerals apart: બે descends from the feminine/neuter dvé by dv → bb → b, while ત્રણ's r is a learned restoration from Sanskrit, put back after Prakrit tīṇi had already dropped it.

6.1 એક, બે, ત્રણ, ચાર, પાંચ — one to five

Three of these will look familiar from any other Indian language. Two won't — and both have a reason.

You'll want to know: the five

	Gujarati	said
1	એક	ek
2	બે	be
3	ત્રણ	traṇ
4	ચાર	chār
5	પાંચ	pāch

Notice the script: Gujarati is Devanagari **without the top line**. Same letters, same system — the shirorekha simply isn't drawn. If you've done the Hindi writing track you can feel the relationship immediately.

What you’ve built: two surprises and a headless script

Most neighbouring languages have a *d* in “two,” but Gujarati says બે *be*. Hindi says *tīn* for “three,” but Gujarati says ત્રણ *traṇ*, with an *r*. Do not carry both histories while the count is still new. Make the five forms automatic first; the next prerequisite-ordered lesson explains why *be* and *traṇ* took those shapes.

Your turn

Say these aloud:

- “ek, be, traṇ, chār, pāch”
- the odd two — Gujarati **be** and **traṇ**
- the script clue — Devanagari shapes without a top line

Before you move on

Count to five in Gujarati. (*Ek, be, traṇ, chār, pāch.*) Why does બે look unlike its neighbours? (It begins with *b*, not *d*.) What does ત્રણ contain that Hindi *tīn* does not? (*r*.) What is visibly missing from the Gujarati script? (The top line: the *shirorekha* is not drawn.) Next: trace the two surprising number histories.

6.2 Two number histories: *be* and *traṇ*

Count once: *ek, be, traṇ, chār, pāch*. Which two forms look least like Hindi or Marathi? (*Be* and *traṇ*.)

The word, taken apart — its roots and family

Sanskrit had gendered forms of “two,” and its daughters selected different parts of that paradigm:

language	“two”	route
Sanskrit	<i>dváu</i> (masc.) · <i>dvé</i> (fem. and neut.)	—
Hindi	<i>do</i>	masculine side
Marathi	<i>don</i>	masculine side, plus an analogical <i>-n</i>
Bengali	<i>dui</i>	disyllabic Prakrit <i>duve</i>
Gujarati	<i>be</i>	feminine/neuter <i>dvé</i> side

Gujarati **બ** is not a corruption of *do*. It is a **different inheritance** from the same Sanskrit paradigm.

The initial cluster changed too. In *dv-*, the dental *d* adopted the **labial place** of the following *v*: *dv* → *bb* → *b*. The first consonant was remade in the shape of its neighbour, then the double simplified.

The word, taken apart — its roots and family

stage	“three”
Sanskrit neuter	<i>trīṇi</i>
Prakrit	<i>tiṇṇi</i> : <i>r</i> already gone
Hindi	<i>tīn</i>
Gujarati	<i>tran</i> : <i>r</i> present again

The shared **ṇ** shows that Hindi and Gujarati both descend from neuter *trīṇi* through Prakrit *tiṇṇi*. By that stage, the *r* was gone and its weight had moved into doubled *ṇṇ*. Hindi later simplified the double and lengthened the vowel.

Gujarati’s *tr-* is generally treated as **restored from Sanskrit**, not carried through unbroken. Sanskrit remained a literary language and continued to reshape its descendants. *Tran* looks older than *tīn*, but it is closer because speakers put the *r* back.

Your turn

Say these aloud:

- Gujarati’s selected form — feminine/neuter *dvé*
- the sound path — *dv* → *bb* → *b*

- the r path — $trĩṇi \rightarrow tiṇṇi \rightarrow traṇ$
- inherited continuously or restored — restored

Before you move on

Why *be*, not Hindi *do*? (Different Sanskrit forms.) What changed in $dv \rightarrow b$? (D became labial beside v ; the double simplified.) Did $traṇ$ keep r ? (No: Sanskrit restored Prakrit's lost r .) How can a newer form look older? (Learned restoration.)

Chapter 7

Six Verbs at the Core

Modes: ⇄ voice (6) ⇄ Hands-free start: all 6 lessons.

By the end of this chapter: I can name six everyday Gujarati verbs by the neuter -જ ending they all share, strip that ending to reach the stem, and say what I do with stem, person-ending, and the copula છે.

The sixth verb runs the whole chapter at once: strip the neuter -જ from all six infinitives, hold the retroflex ʒ that Prakrit pulled back from a plain n, put the stem into hũ jāṇũ chhũ, and connect jāṇvũ to the English know it is genuinely cousin to.

7.1 છેજ — “to be,” and the neuter that names every Gujarati verb

You already end a Gujarati sentence with છે *chhe*, “is.” Here is the whole verb behind English “to be” — and the ending that names every other Gujarati verb.

You’ll want to know first — one word

છેજ — *hovũ* — **to be**

Left to right: છે is *ha*, and the sign ે on it makes *ho*; then વ with the small ુ under it for *vu*; and the dot ે on top sends that last vowel through the nose.

Take the final piece -જ -*vũ* off, and the **stem** is left: છે- *ho-*.

Grammar Lens: the ending is a neuter

Gujarati sorts words into **three** genders where Hindi next door keeps two: masculine **-o**, feminine **-ī**, and the third one, **neuter**, **-ũ** — *sāro*, *sārī*, *sārũ*, three shapes of “good.”

That third gender is where **-જ** comes from. **-જ -vũ** is a neuter ending, so **every Gujarati verb is named in the neuter**. English names a verb by putting a word in front, “to be”; Gujarati names it by putting its third gender on the end — and hands you the stem for free every time.

The word, taken apart — its roots and family

hovũ comes from Sanskrit *bhavati*, “becomes,” on the root *bhū*-. Middle Indo-Aryan thinned that *bh-* to *h-*, so *bhavati* wore down to *hoi* and then to *hovũ*. The root is Indo-European, **bheu-* “grow, become,” and English is full of it: **be**, **been**, and — through “the place where one dwells” — **build**, **booth**, **bower**. Latin held it as *futūrus*, English’s **future**; Greek as *phúsis*, English’s **physics**.

But **છ** *chhe* is not from that root at all. It comes through Old Gujarati *achhai* from a Sanskrit verb of **dwelling**, **abiding** — staying put rather than becoming — and its cousins are Bengali *āche* and Marathi *āhe*. Hindi’s *hai* continues Sanskrit *asti* “is,” the same ancient verb as English **is**.

So English **is** and Hindi *hai* are relatives; Gujarati **chhe** is not one of them. English plays the same trick, running *be*, *am*, *is*, *was* off several old verbs at once.

Your turn

- *Say it*: **hovũ** — to be
- *Strip*: **hovũ** minus **-vũ** leaves the stem **ho-**
- *Name*: the gender of **-vũ** — neuter, the third one
- *Split*: **chhe** from a verb of dwelling; *hai* and English **is** from another

Before you move on

Which ending names a Gujarati verb, and which of the three genders is it? (**-vũ**, neuter.) What is left of *hovũ* once it comes off?

(**Ho-**.) Does **chhe** share an ancestor with Hindi *hai*? (No — *hai* goes with English **is**; *chhe* comes from a verb of dwelling.)
 Sources: Wiktionary: જોઈ; Wiktionary: છે.

7.2 જઈ — “to go,” and a *y* that turned into a *j*

Name the ending that titles every Gujarati verb, and take it off *hovũ*. Here is the second verb wearing it.

You’ll want to know first — one word

જઈ — *javũ* — **to go**

Left to right: જ is *ja* — it carries a built-in *a*, because a Gujarati consonant with no vowel sign on it always does. Then the familiar ઈ -*vũ*. Two pieces, and you have met the second one already: જ + ઈ.

Strip the ending and the stem is જ- *ja-*, which stretches to જા- *jā-* the moment a person-ending follows it.

The word, taken apart — its roots and family

javũ continues Sanskrit *yāti*, “goes,” on the root *yā-*. The consonant changed on the way: **Prakrit turned word-initial Sanskrit *y-* into *j-*, right across the middle period.** That is a decoding tool worth keeping, because it runs through the whole vocabulary:

- Sanskrit *yoga* → Gujarati *jog*
- Sanskrit *yamunā* (the river) → *Jamnā*
- Sanskrit *yava* “barley” → *jav*
- Sanskrit *yuvan* “young” → *jovān* “a young man”

So a Gujarati word starting in *j-* often has a Sanskrit *y-* standing behind it.

This particular root left little in English — honest news, and better said than faked. Its clearest survival outside India is Sanskrit *yāna* “vehicle, journey,” the word inside **Mahayana**, “the great vehicle.”

Grammar Lens: stem, then person, then the copula

Gujarati builds its plain present out of three pieces in a fixed order — stem, an ending that says *who*, and the copula you already own:

- *hũ jāũ chhũ* — I go
- *tame jāo chho* — you go, respectfully
- *te jāy chhe* — he goes, she goes

The copula is the piece that shifts: *chhũ*, *chho*, *chhe*. It is **chhe** doing that work, not Hindi’s *hai* — the tell you traced last time. And a man and a woman say these identically: the plain present carries no gender at all.

Your turn

- *Say it:* **javũ** — to go
- *Strip:* **javũ** minus **-vũ** leaves **ja-**
- *Build:* **hũ jāũ chhũ** — I go
- *Trace it:* Sanskrit *yāti* → **javũ**, the *y-* becoming *j-*
- *Apply:* *yoga* → **jog**, *yava* → **jav**

Before you move on

What happened to Sanskrit *y-* at the front of a word? (Prakrit made it *j-*.) Which three pieces make the Gujarati present? (Stem, person-ending, copula.) Say “I go.” (*Hũ jāũ chhũ*.) Which of those three words is the copula, and which language does it *not* match? (*Chhũ*; Hindi.)
Source: Wiktionary: જાવું.

7.3 આવડું — “to come,” which began as “to reach”

Say “I go” in Gujarati, then strip *javũ* to its stem. Here is the verb that points the other way.

You'll want to know first — one word

આવૃ — *āvvũ* — to come

It opens with આ, the standalone letter for long *ā* — Gujarati uses a full letter, not a sign, when a word begins with its vowel. Then વ *va*, a second વ, the વ, and the nasal dot.

Two વ in a row, each belonging to a different piece: the first closes the stem આવ- *āv-*, the second opens the ending -વૃ *-vũ* you now know by heart.

The present runs as before: *hũ āvũ chhũ*, “I come.”

The word, taken apart — its roots and family

āvũ comes through Old Gujarati *āvivaũ* and Prakrit *āvei* from Sanskrit *āpayati*, on the root **āp-**, “to reach, to attain.” Gujarati’s “come” is not built from “go” at all. It is built from **arriving** — reaching the place where the speaker already is.

That root is Indo-European, and Latin holds it as *apere*, “to fasten, to reach for.” English took the family whole: **apt** (“fitted”), **aptitude**, **adapt**, **adept**, **inept**. Put *co-* “together” in front and Latin makes *cōpula*, “the thing that fastens two things into one” — which English borrowed in two shapes: worn down into **couple**, and kept whole as the grammarian’s **copula**.

So the Gujarati verb for coming and the technical name for what **chhe** does at the end of your sentences are, far enough back, one root.

What you’ve built: the *p* that softened to a *v*

One regular change did most of the work between *āpayati* and *āvei*: **a single Sanskrit *p* standing between two vowels softened to *v***. It happened right across the vocabulary, so it decodes far more than this verb:

- Sanskrit *dīpa* “lamp” → *dīva* → Gujarati *divo*
- Sanskrit *kūpa* “well” → Gujarati *kūvo*

And *dīpa* is half of દિવાળી *divālī* — *dīpa* plus *āvalī*, “a row of lamps.” The festival carries the sound change in its own name.

Your turn

- Say it: **āvũ** — to come

- *Split*: āv- plus -vũ, the two ૧ belonging to different pieces
- *Build*: hũ āvũ chhũ — I come
- *Trace it*: Sanskrit āp- “reach” → āvvũ, and → English apt, couple
- *Apply*: dīpa → divo, kūpa → kūvo

Before you move on

What did the root behind āvvũ originally mean? (“Reach, attain.”)
 What happens to a single Sanskrit *p* between vowels? (It softens to *v*.) Which English word for a joining verb is a cousin of āvvũ?
 (Copula.) Say “I come.” (Hũ āvũ chhũ.)
 Source: Wiktionary: ૨૧૧૧૧.

7.4 ૨૧૧૧ — “to eat,” and a family that stops before English

Say “to come,” then name the ending it shares with every other Gujarati verb. The fourth verb takes a new letter with it.

You’ll want to know first — one word

૨૧૧૧ — *khāvē* — to eat

The new letter is ૨, *kha*: a *k* with a puff of breath straight after it. English makes that puff without noticing — hold a hand in front of your mouth and say *kite*. Gujarati notices, and gives the puffed and unpuffed sounds separate letters, ૨ and ૩.

Then the long-ā sign ં, and the ending you know: ૨- *khā*- plus -૧ -*vũ*. The present is *hũ khāũ chhũ*, “I eat.”

The word, taken apart — its roots and family

khāvē comes from Sanskrit *khādati*, “chews, eats.” Prakrit kept it as *khādi*, and then the single *d* between vowels wore away — the same erosion that has been thinning these verbs all along — leaving the bare stem *khā*-.

Its sisters are all alive: Hindi *khānā*, Punjabi *khānā*, Marathi *khāne*, Bengali *khāoyā*. One verb, five modern shapes.

And there the family stops. Scholars reconstruct an Indo-European root behind *khādati*, but it left nothing in English — no cousin, no borrowing, not even a worn-down one. That is worth saying out loud rather than reaching for a lookalike, because this whole method rests on hanging a new word on a word you already own, and **a cousin that is not really a cousin is worse than none at all**. Some words you take on their own terms. *Khāvũ* is one of them, and its five sisters are anchor enough.

Your turn

- *Say it:* **khāvũ** — to eat, with the breath after the *k*
- *Contrast:* **𑖦** puffed, **𑖧** unpuffed
- *Build:* **hũ khāũ chhũ** — I eat
- *Trace it:* Sanskrit *khādati* → *khādi* → **khāvũ**, the *d* worn away
- *Admit:* no honest English cousin — and that is the right answer

Before you move on

What separates **𑖦** from **𑖧**? (A puff of breath.) Which Sanskrit verb is behind *khāvũ*, and what happened to its *d*? (*Khādati*; it wore away between the vowels.) Which English word is its cousin? (None — and pretending otherwise would be worse than admitting it.) Say “I eat.” (*Hũ khāũ chhũ*.)
Source: Wiktionary: **𑖦𑖧**.

7.5 𑖦𑖧 — “to see,” one mark away from “to go”

Two verbs back: how do you say “to go,” and how do you say “to eat”? The fifth verb is the nearest neighbour *javũ* has.

You’ll want to know first — one word

𑖦𑖧 — *javũ* — to see

જ *ja*, wearing the sign ે that turns it into *jo*; then the ending જ્ -*vũ*. The stem is જો- *jo-*, and the present runs as it always has: *hũ joũ chhũ*, “I see.”

What you’ve built: one mark apart

Set the two words side by side and the whole difference is one small mark:

- જજ્ *javũ* — to go. Bare જ, carrying its built-in *a*.
- જોજ્ *joũ* — to see. The same જ, with ે on it.

Add that one sign and going becomes seeing. In the mouth the contrast is just as small and just as total — *ja* against *jo* — so this is a pair worth saying aloud until the vowels separate cleanly. Gujarati will keep doing this: the consonants carry the word, and a single vowel mark decides which word it is.

The word, taken apart — its roots and family

joũ continues a Prakrit verb *joai*, “looks.” Where *joai* itself came from is genuinely unsettled, and it is more useful to say so than to pick a winner.

The usual account takes it from Sanskrit *dyotate*, “shines” — sight arriving by way of light. That is a well-worn path: Greek *phainō* “shine” produced *phainómenon*, “a thing that shows itself,” which English borrowed as **phenomenon**, and from the same family **phantom** and **fantasy**. A second account brings in an older verb of watching and waiting for, the one behind Hindi *johnā*, “to watch out for.” The two may simply have run together; forms do that.

So: **probable, not proven**. Etymology has error bars like any other science, and a lesson that hides them is teaching you to trust the wrong things.

Your turn

- *Say it*: **jovũ** — to see
- *Contrast*: **javũ** go, **jovũ** see — one mark, one vowel
- *Build*: **hũ joũ chhũ** — I see

- *Hedge*: *jovũ* probably from “shines” — probable, not proven
- *Run through*: **hovũ, javũ, āvvũ, khāvũ, jovũ**

Before you move on

What single mark separates *javũ* from *jovũ*? (The ્ sign: *ja* becomes *jo*.) Say “I see.” (*Hũ joũ chhũ*.) How settled is the origin of *jovũ*? (Not settled — probably from a verb meaning “shines,” possibly merged with one meaning “watch out for.”)
Source: Wiktionary: ્.

7.6 ્ — “to know,” a word English has been carrying all along

Run the five you have — *hovũ, javũ, āvvũ, khāvũ, jovũ* — and pull the ending off each one. The sixth is the closest of them all to English.

You’ll want to know first — one word

𑂔𑂲𑂱 — *jāṇvũ* — **to know**

𑂔 *ja* with the long-*ā* sign ્ on it gives *jā*. Then a new letter: ્, an *n* made with the tongue tip curled back onto the roof of the mouth — a **retroflex**, written *ṇ*. Gujarati inherited a whole set of these curled sounds from Sanskrit, and you have met one before in ્.

Then the ending. ્- *jāṇ*- plus -𑂱 -*vũ*, and the present is *hũ jāṇvũ chhũ*, “I know.”

The word, taken apart — its roots and family

jāṇvũ comes from Sanskrit *jānāti*, “knows,” on the root *jñā-*. The retroflex is Prakrit’s work: a single *n* between vowels was pulled back onto the roof of the mouth, so *jānāti* became *jāṇadi* and then *jāṇvũ*. The root is Indo-European, **gnō-* “to know,” and English is stuffed with it.

Straight down the Germanic line: **know, knowledge, can** — which once meant “to know how” — **cunning, ken**, and **uncouth**, literally “un-known.” Borrowed from Latin (*g*)*nōscere*: **notice, note, notion**,

cognition, recognize, acquaint, noble (“well-known”), and **ignore**, which is “not to know.” Borrowed from Greek *gnōsis*: **diagnosis, prognosis, agnostic**.

Two verbs ago the family stopped before English entirely. This one runs three dozen words deep. *Jāṇvũ* is not a stranger: it is a first cousin of the plainest word English owns for the same idea, and every one of those borrowings is another peg to hang it on.

Your turn

- *Say it:* **jāṇvũ** — to know, with the tongue curled back on the *ṇ*
- *Build:* **hũ jāṇũ chhũ** — I know
- *Run through:* all six — *hovũ, javũ, āvvũ, khāvũ, jovũ, jāṇvũ* — stripping each stem
- *Build:* **hũ jāũ chhũ, hũ āvũ chhũ, hũ khāvũ chhũ, hũ joũ chhũ**
- *Connect:* **jāṇvũ** ← *jñā-* → English **know, notice, diagnosis**

Before you move on

Name all six verbs and take the ending off each. (*Ho-*, *ja-*, *āv-*, *khā-*, *jo-*, *jāṇ-*; the ending is the neuter **-vũ**.) Which English verb is the same word as *jāṇvũ*? (**Know**.) What makes the *ṇ* different from a plain *n*? (The tongue curls back.) Say “I know.” (*Hũ jāṇũ chhũ*.) Source: Wiktionary: ᩠᩵ᩅᩢᩣᨾᩮᩥᩬ᩵.

Chapter 8

The Mind and the Page

Modes: 👁 eyes (4) ⇌ Hands-free start: all 4 lessons.

By the end of this chapter: I can say that I think, understand, read and write in Gujarati, hear and write the nasal that sits in the middle of વાંચવું, and name what each of the four roots was doing before it meant a mental act — ranging about, waking up, speaking, and scratching.

Say હું મારું નામ લખું છું, run the chapter’s four verbs back with the four things their roots meant — *vichārvũ* from a root meaning to range about, *samajvũ* from one meaning to wake, *vāchvũ* from one meaning to speak, *lakhvũ* from one meaning to scratch — place the medial nasal of *vāch-* and the assimilate-then-simplify path from *dhy* to *j*, and say which of the four honestly has no English cousin at all.

8.1 વિચારવું — “to think,” which began as wandering

Jāṇvũ — take the ending off it, and name the plain English verb that is the same word. Knowing is where you arrive. Here is what you do on the way.

You’ll want to know first — one word

વિચારવું — *vichārvũ* — to think

The stem is વિચાર- *vichār-*: *hũ vichārũ chhũ*, “I think.”

The letters in this word

वि is ॡ *va* wearing ॆ, the short-*i* sign — and that sign stands to the **left** of its letter although the sound comes after it. Then ॢ: the letter ॢ *cha*, already yours from *chār*, “four,” under the long-*ā* sign. Then ॣ *ra*, and the ending ।.

The word, taken apart — its roots and family

विचार *vichār* is a word before it is a verb: it means **a thought**. It is Sanskrit *vicāra* — **vi-** “apart, thoroughly” on the root **car-**, “to move, to range about.” A thought is named as a **ranging over**, the mind walking round a thing.

The root is Indo-European, **kwel-* “to turn.” Germanic wore it into **wheel**, whose whole business is turning. Greek made *kúklos*, “a circle,” which English borrowed as **cycle** and **encyclopedia**. Latin made *colere*, “to till, to dwell in,” behind **cultivate**, **culture** and **colony**.

What you’ve built: a verb Gujarati made rather than inherited

Hovũ, javũ, āvvũ, khāvũ, jovũ and *jāṇvũ* came down the ordinary road, worn thinner at every step. *Vichārvũ* did not: Gujarati took the **noun** *vichār* and put a verb ending on it, on the model of Sanskrit *vicarati*. You have watched Sanskrit reach forward like this before. Count to three: *ek, be, traṇ*. Prakrit had lost the *r* of *trīṇi*, and *traṇ* carries it because Sanskrit put it back. A language that never stops reading its ancestor never stops borrowing from it. *Traṇ* got a sound that way; *vichārvũ* got a whole verb.

Your turn

- *Say it:* **vichārvũ** — to think
- *Strip:* minus **-vũ** leaves **vichār-**, which is also the noun “a thought”
- *Build:* **hũ vichārũ chhũ** — I think
- *Trace it:* **vi-** plus **car-** “range about” → **wheel, cycle, colony**
- *Contrast:* **jāṇvũ** handed down, and English **know**; **vichārvũ** built — as *traṇ* had its *r* handed back

Before you move on

What did the root behind *vichār* mean first, and which everyday English word turns on it? (“To range about”; **wheel**.) Was *vichārvũ* handed down or built, and which count of yours was patched the same way? (Built on the noun *vichār*; *traṇ* had its *r* restored.) Say “I think.” (*Hũ vichārvũ chhũ.*)
Source: Wiktionary: विचारवृ.

8.2 समजवृ — “to understand,” which is waking up

Two verbs and one root meaning: *jāṇvũ*, and *vichārvũ* on a root that meant **to range about**. The third sits between them, with a third kind of picture again.

You’ll want to know first — one word

समजवृ — *samajvũ* — **to understand**

The stem is समज- *samaj-*: *hũ samajũ chhũ*, “I understand.” *Samaj* on its own, said alone, means “understood.”

The letters in this word

Not one new letter. स *sa* stood in *namaste*, म *ma* in every *mārũ*, ज *ja* opened *javũ*. Three bare consonants carrying their built-in *a*, then the ending: *sa-ma-ja-vũ*.

The word, taken apart — its roots and family

samajvũ comes from Sanskrit *sambudhyate*: **sam-** “together, fully,” on the root **budh-**, “**to wake, to become aware**.” To understand is to come awake to a thing.

That root named a person too. One who has fully woken is a **buddha** — the title is this root with a participle ending, and it means exactly “the awakened one.”

It is Indo-European as well, **bheudh-*, and English keeps it in quieter clothes. Old English *bēodan*, “to announce, to offer,” left **bode** and **forebode** — to bode ill is to give warning, which is what a waking mind does — and **forbid**, an announcement pointed the other way.

What you’ve built: a cluster that assimilated, then simplified

Sambudhyate has a **dhy** in the middle; Gujarati has a plain **j**. Two steps did that, in this order. **Assimilate:** the *dh* was remade in the shape of the *y* after it, both landing on the palate, and the pair came out doubled as **jjh** — Prakrit *saṃbujjhadī*. **Simplify:** the double then fell to a single **j**, giving *samaj-*.

You have watched this pair once already. Count to two: *be*. Its *dv-* went to **bb** because the *d* was remade in the shape of the *v* beside it, and the double then simplified to **b**. Different letters, same two moves.

Your turn

- *Say it:* **samajvũ**, then **hũ samajũ chhũ** — I understand
- *Trace it:* *sambudhyate* → *saṃbujjhadī* → **samaj-**: assimilate, then simplify
- *Match:* the same two moves in *dv* → *bb* → **b**, which gave you *be*
- *Connect:* **budh-** “to wake” → **buddha**, and English **bode**, **forbid**
- *Run through:* **jāṇvũ**, **vichārvũ**, **samajvũ** — know, think, understand

Before you move on

What did the root behind *samajvũ* mean, and which famous title is the same root? (“To wake, to become aware”; **Buddha**.) Name the two steps from *dhy* to *j*, and the number that took the same two.

(Assimilate, then simplify; *be*, from *dv* to *bb* to *b*.) Say “I understand.” (*Hũ samajũ chhũ*.)

Source: Wiktionary: સમજવું.

8.3 વાંચવું — “to read,” which is making a page speak

Hũ samajũ chhũ — and what did that root mean first? Then *vichārvũ*. The next verb puts the words in front of you.

You'll want to know first — one word

વૈચ્વ — *vāchvũ* — to read

The stem is વૈચ્- *vāch-*, and nothing new happens after it: *hũ vāchũ chhũ*, “I read.”

The letters in this word

વૈ is વ *va* with the long-*ā* sign, and the dot ̣ sits on top of it. Then ચ *cha*, the letter you counted *chār* with and thought with in *vichār*. Then વૃ. *Vā-cha-vũ* — and the dot in the middle is the piece to be careful about.

What you've built: a nasal that is not at the end

Every nasal dot so far has been at the **end** of a word: *hũ*, *chhũ*, and the -વૃ on every verb. This one is in the **middle**, doing the same job in a new place — the *ā* before ચ goes through the nose, and it must be heard as well as written. Count to five and stop on વૈચ્ *pāch*: same dot, same position, same nasal *ā* running into a ચ.

And you know how much one small mark can carry. જવૃ *javũ* is “to go” and જોવૃ *jovũ* is “to see,” and the whole difference is the sign on the જ. This dot is the same kind of hinge: small enough to skip, and not skippable.

The word, taken apart — its roots and family

vāchvũ comes through Old Gujarati from Sanskrit *vācayati*, a **causative**: the root **vac-** means “to speak,” so *vācayati* is “**to make speak**.” Reading was named as making a silent page talk — which is what reading was, aloud, for most of the time people have done it. The root is Indo-European, **wekw-*, and Latin holds it as *vōx*, “voice.” English took the family whole: **voice**, **vocal**, **vowel**, **vocation** (a calling), **advocate** (one called to your side), **provoke**, **revoke**.

Your turn

- *Say it:* **vāchvũ**, then **hũ vāchũ chhũ** — I read
- *Match:* the same middle nasal in **pāch**, “five”
- *Contrast:* **javũ** and **jovũ** — one mark decides which word it is

- *Trace it:* *vac-* “speak” → *vācayati* “make speak” → **vāchvũ**, and → **voice, vowel, advocate**
- *Run through:* **vichārvũ, samajvũ, vāchvũ**

Before you move on

Where does the nasal dot sit in *vāchvũ*, and which number of yours carries it in the same place? (In the middle, on the *ā*; *pāch*.) What did *vācayati* mean literally, and which English word for the thing you speak with is its cousin? (“To make speak”; **voice**.) Say “I read.” (*Hũ vāchũ chhũ*.)

Source: Wiktionary: **𑀧𑁆𑀭𑀸𑀓**.

8.4 𑀧𑁆𑀭𑀸𑀓 — “to write,” which began as scratching

Three verbs, three pictures: *vichārvũ* on a root meaning **to range about**, *samajvũ* on one meaning **to wake**, *vāchvũ* on one meaning **to speak**. The fourth root is the most physical of them.

You’ll want to know first — one word

𑀧𑁆𑀭𑀸𑀓 — *lakhvũ* — **to write**

The stem is 𑀧𑁆𑀭𑀸𑀓 *lakh-*, and now you can say something worth saying:
𑀧𑁆𑀭𑀸𑀓 𑀧𑀸𑀓 𑀧𑀸𑀓 𑀧𑁆𑀭𑀸𑀓 𑀧𑀸𑀓 — *hũ mārũ nām lakhũ chhũ* — “**I write my name.**”

The letters in this word

Both letters are already yours. 𑀧 *la* stood in *bolvũ*, “to speak.” 𑀭 *kha* is the puffed *k* of *khāvũ*, “to eat.” *La-kha-vũ*.

The word, taken apart — its roots and family

lakhvũ comes through Prakrit from Sanskrit *likhati*, and **likh-** meant “**to scratch, to score**” long before it meant to write. Its plainest Sanskrit relative says so out loud: 𑀧𑀸𑀓 *rekhā*, “a line, a streak.” Beyond Indo-Aryan the cousins are disputed, and this lesson claims none — the same answer *khāvũ* gave. What is not disputed is that three families reached for one picture: Latin *scr̄bere* also meant **to**

scratch, behind **scribe** and **script**, and English **write** began as Germanic “to score.”

What you’ve built: four verbs, and what each root did first

verb	what its root did first
<i>vichārvũ</i> — think	ranged about, turned
<i>samajvũ</i> — understand	woke up
<i>vāchvũ</i> — read	spoke
<i>lakhvũ</i> — write	scratched

Not one of the four began as a mental act. The mind gets its vocabulary from the body, every time.

Three habits ran through the chapter. A cluster **assimilates and then simplifies** — *dhy* to *jjh* to *j* in *samajvũ*, whose root *budh-* also gave **buddha**. A **dot in the middle** is a nasal you must hear — *vāch-*, whose root *vac-* also gave **voice**. And when the trail stops you say so: *lakh-* and *khāvũ* have no secure English cousin, *jovũ*’s origin is probable rather than proven, and *jāṇvũ* is the one that paid out, being English **know**.

Your turn

- *Produce*: **hũ mārũ nām lakhũ chhũ** — I write my name
- *Run through*: **vichārvũ, samajvũ, vāchvũ, lakhvũ** — stripping **-vũ** off each
- *Name*: what each root did first — ranged, woke, spoke, scratched
- *Say it*: the two steps behind *samaj-*, and where the dot sits in **vāchvũ**
- *Connect*: **rekhā**, still meaning the scratch

Before you move on

Say “I write my name.” (*Hũ mārũ nām lakhũ chhũ*.) Name the four verbs and what each root did before it meant a mental act. (Ranged, woke, spoke, scratched.) Which Sanskrit word is *lakh-*’s plainest relative? (**Rekhā**, “a line.”) Which of your verbs has a certain English cousin, and which have none? (*Jāṇvũ* is **know**; *lakh-*

and *khāvũ* have none.)
Source: Wiktionary: 𑌕𑌃𑌔𑌃.

Chapter 9

Taking, Asking, Helping, Liking

Modes: 👁 eyes (4) ⇌ Hands-free start: all 4 lessons.

By the end of this chapter: I can take, ask, help and say what I like in Gujarati, explain why મદદ કરવી ends in the feminine -ી while કામ કરવું ends in the neuter, and say why મને ગુજરાતી ગમે છે leaves no room for me as its subject.

Say મને ગુજરાતી ગમે છે and hear that you are not its subject, set it against હું ગુજરાતી બોલું છું where you are, trace ગમવું back to gamyate — the passive of gam- 'to go', so the verb was born without a doer and is English come besides — and run the chapter's four verbs back with where each came from: Sanskrit prek- behind pūchhvũ, lebh- behind levũ, Arabic madad through Persian, and the feminine ending madad forces onto karvũ.

9.1 લેવું — “to take,” and a family tree with an argument in it

Lakhvũ and vāchvũ — and what was lakh- doing before it wrote anything? (Scratching.) The next verb is shorter than either.

You'll want to know first — one word

લેવું — levũ — to take

Take the ending off and almost nothing is left: the stem is one syllable, લે- le-.

The letters in this word

લે is લ la, met in *lakhvũ* one lesson ago, wearing the sign ે that turns it into *le* — the same sign sitting on છે *chhe* at the end of your sentences. Then જ.

Grammar Lens: the stem relaxes when a person arrives

હું લઉં છું — *hũ laũ chhũ* — “I take.”

The stem was *le-* and its vowel has relaxed to *a* under the person-ending. That is the old rule seen from the other side: *javũ*’s stem *ja-* **stretched** to *jā-* when a person-ending arrived. A one-syllable stem is the piece most likely to move; the ending and the copula behind it never do.

The word, taken apart — its roots and family

levũ comes through Prakrit *lei* from Sanskrit *labhate*, “takes, gains, obtains” — the *bh* worn away between the vowels, as a *d* was in *khāvũ*. The root is Indo-European, **lebh-*, and its meaning is worth holding: not “seize” but “**work, harvest, gain, profit.**” Taking, named as what you have earned.

The secure cousins are outside English: Lithuanian *lõbis*, “treasure,” and Greek *lápura*, “spoils of war.” Both keep the sense of a thing gained rather than grabbed.

Then the argument. Latin *labor*, “toil” — English’s **labour, laboratory, elaborate** — is often traced to this same root, which would make working and taking one word. That link is contested, and at least one standard authority rejects it. So: **probable, not proven**, exactly as *jovũ* was.

Three settings on one dial. *Jāṇvũ* is **certain** — it is English **know**. *Levũ* and *jovũ* are **disputed**. *Khāvũ* has **nothing**, and you say so.

Your turn

- *Say it:* **levũ**, then **hũ laũ chhũ** — the stem relaxing under the ending
- *Match:* *le-* to *la-* here, *ja-* to *jā-* in **javũ**
- *Trace it:* *labhate* “gains” → **levũ**, the *bh* worn away
- *Sort:* **jāṇvũ** certain and English **know**; **levũ** and **jovũ** disputed; **khāvũ** nothing

- *Run through:* **vāchvũ**, **lakhvũ**, **levũ**

Before you move on

Say “I take.” (*Hũ laũ chhũ*.) Did the root behind *levũ* mean seizing or earning? (Earning: “work, harvest, gain.”) Is English **labour** a cousin? (Possibly — the link is both made and rejected, so probable, not proven.) Which verb of yours has a **certain** English cousin, and which has **none**? (*Jāṇvũ* is **know**; *khāvũ* has none.) Source: Wiktionary: **६८**.

9.2 पृ८८ — “to ask,” the verb English kept for praying

Hũ laũ chhũ — did the root behind *levũ* mean seizing or earning? (**Earning**.) Here is the verb for the one thing you cannot take: an answer.

You’ll want to know first — one word

पृ८८ — *pūchhvũ* — to ask

The stem is पृ८- *pūchh-*, and the present holds no surprises: *hũ pūchhũ chhũ*, “I ask.”

The letters in this word

पृ is *pa*, counted with in पृ८ *pāch*. On it sits a new sign: ८, the **long** *ū*, a heavier hook than the short ८ on every -८. Two different vowels, not two speeds of one. Then ८ *chha*, opening ८ *chhe*.

What you’ve built: a p that stayed because of where it stood

You know a rule that eats *p*: **a single Sanskrit *p* between two vowels softened to *v***. It is how *āpayati*, on a root meaning “reach,” became ८८८ *āvũ*.

So why does *pūchhvũ* still open with a hard पृ? Because the condition is the whole rule: that *p* is not between vowels, it is at the **front** of the word, where nothing softened it. Count to five for the same shelter — पृ८ *pāch* keeps its *p*.

A sound law you can only recite is a fact. One whose condition you can check is a tool.

The word, taken apart — its roots and family

pūchhvũ comes from Sanskrit *pr̥cchati*, “asks,” on the Indo-European root **prek-*, “to ask.” This one paid out generously. Latin took it as *precārī*, “to beg, to entreat,” and English has the family: **pray**, **prayer**, **deprecate**. Latin also made *precārius*, “held only so long as another allows it,” English’s **precarious** — a thing you keep by asking. German still says *fragen*, Persian *porsīdan*. English is the odd one out. Its own inherited cousin, Old English *frignan*, died out and **ask** came from elsewhere, so the root survives in English only in its religious clothes. Saying *hũ pūchhvũ chhvũ*, you use the verb English kept for **praying**.

Your turn

- Say it: **pūchhvũ**, then **hũ pūchhvũ chhvũ** — I ask
- Contrast: short ॢ in -ॢ, long ॣ in ॣ
- Explain: why **āvvũ** lost its *p*, and **pūchhvũ** and **pāch** kept theirs
- Trace it: *pr̥cchati* → **pūchhvũ**, and → **pray**, **precarious**, *fragen*
- Run through: **lakhvũ**, **levũ** from *lebh-*, **pūchhvũ**

Before you move on

Say “I ask.” (*Hũ pūchhvũ chhvũ*.) Why did *pūchhvũ*’s *p* survive when the one inside *āvvũ*’s ancestor did not, and which number of yours is sheltered the same way? (It stands at the front, not between vowels; *pāch*.) Which English word for addressing a god is its cousin? (**Pray**.)
Source: Wiktionary: ॣॢॣ.

9.3 ॣॢॣ ॣॣॣ — “to help,” which is a hand held out

Pūchhvũ and *levũ* — and which English word for talking to a god is *pūchhvũ*’s cousin? (**Pray**.) Now, what you do once someone has asked.

You'll want to know first — one phrase

મદદ કરવી — *madad karvī* — **to help**

Two words. મદદ *madad* is a noun, “help”; કરવું *karvũ* is “to do,” yours since *kām karvũ*. Gujarati helps by **doing help**.

હું મદદ કરું છું — *hũ madad karũ chhũ* — “**I help.**”

The letters in this word

મદદ is three bare consonants with their built-in *a*: મ *ma*, then a doubled દ *da* — the દ that ends *ānand*. In કરવી the last letter wears the long ી you met in *maḷīshũ*, and that ી is what this lesson is about.

Grammar Lens: the ending that stopped being neuter

Every Gujarati verb so far has been named in the **neuter**: -વું *-vũ*, the third of the three genders, the *-ũ* of *sārũ* and *mārũ*. This one is not. કરવી *karvī* wears *-ī*, the **feminine** of *sārī* and *mārī*, because મદદ is a **feminine** noun and the infinitive agrees with what is done:

- કામ કરવું *kām karvũ* — “to work.” *Kām* is neuter, so *karvũ*.
- મદદ કરવી *madad karvī* — “to help.” *Madad* is feminine, so *karvī*.

Gujarati keeps three genders where Hindi next door keeps two, and here that system does visible work. You have watched gender decide a form once before, at the other end of a word’s life: બે *be* comes down from Sanskrit’s feminine and neuter *dvé*, not the masculine *dváu*. Gender chose the ancestor there; it chooses the ending here.

The word, taken apart — its roots and family

મદદ is not Sanskrit at all. It is **Arabic** *madad*, borrowed through **Persian**, on the root **m-d-d**, “**to stretch out, to extend**” — whose plainest sentence is “extend your hand.” *Madad* is a thing held out: a hand, or reinforcements sent to an army.

It belongs to a layer you have tasted. Gujarati was a great trading tongue of the Arabian Sea, and the Persian and Arabic that settled into it is the layer answering “how are you” with મજા *majā*.

Your turn

- *Say it:* **madad karvī**, then **hū madad karū chhū** — I help
- *Contrast:* **kām karvū** neuter, **madad karvī** feminine — the noun decides
- *Trace it:* Arabic *m-d-d* “extend” → Persian → **madad**, beside **majā**
- *Run through:* **levū**, **pūchhvū**, **madad karvī** — gender picking an ending here, an ancestor in **be**

Before you move on

Say “I help.” (*Hū madad karū chhū.*) Why *karvī* and not *karvū*? (𑫛𑫼𑫟𑫽 is feminine; *kām* is neuter.) Where is *madad* from, and which count of yours was also shaped by gender? (**Arabic** through **Persian**, a root meaning “to stretch out”; **be**, from *dvé*.)
Sources: Wiktionary: 𑫛𑫼𑫟𑫽; Wiktionary: Arabic madad.

9.4 ગમવું — “to like,” which is not something you do

Three verbs from this chapter: *levū*, *pūchhvū*, *madad karvī*. Each let you act. The fourth will not.

You’ll want to know first — one word

ગમવું — *gamvū* — **to like**

The infinitive wears the neuter -વું like every verb you own. What comes next does not.

The letters in this word

ગ *ga* opened *gujarātī*, 𑫛 *ma* has been everywhere, then 𑫛 — three shapes floating free, no bar across their tops, the fastest tell of Gujarati.

Grammar Lens: you are not the subject of this sentence

મને ગુજરાતી ગમે છે — *mane gujarātī game chhe* — **I like Gujarati**

Word for word: “**to me** Gujarati **pleases**.” No *hũ* anywhere. મને *mane* is “to me,” carrying the -ને *-ne* of તમને *tamne*.

- હું ગુજરાતી બોલું છું — I speak Gujarati. **I** am the doer.
- મને ગુજરાતી ગમે છે — I like Gujarati. **Gujarati** is.

The verb answers to *gujarātī*, not to me — the instinct behind *madad karvī*. Spanish reaches this shape in *me gusta*, Tamil in *enakku piḍikkum*, neither borrowing from Gujarati nor from each other. Hindi and Urdu use the Persian loan *pasand*; *gamvũ* is Gujarati’s own inherited word.

The word, taken apart — its roots and family

gamvũ is Old Gujarati *gamaĩ*, “to please,” from Prakrit *gammaĩ*, “**is known**,” from Sanskrit *gamyate* — the **passive** of **gam-**, “**to go**.” “It is gone to” became “it is grasped” became “it pleases.” The word was born doerless and never took one.

Two things you hold fall into place. *Gammaĩ* meant “is known,” the work of જાણવું *jāṇvũ*. And *gamyate* holds a **y** that did **not** become *j*: that rule was for Sanskrit *y-* at the **front** of a word, as in *javũ*. This one stood against an *m*, was swallowed into it, and the doubled *mm* thinned — assimilate, then simplify, as *samajvũ* did.

The root is **gwem-*, and English **come** is the same word; Latin *venīre* gave **advent**, **venue**, **invent**. *Āvvũ* runs off another root, one that meant “**to reach**.”

Your turn

- *Produce*: **mane gujarātī game chhe**, then **hũ gujarātī bolũ chhũ** — naming the doer in each
- *Run through*: **levũ** from *lebh-* “gain”, **pũchhvũ** from *prek-* “ask”, **madad** from Arabic through Persian, **gamvũ** from a passive — and why *karvī* ends in *-ī*
- *Trace it*: *gam-* “go” → *gamyate* → **gamvũ**, and → **come**, **advent**
- *Explain*: why *gamyate*’s *y* did not become *j* as *javũ*’s did

- *Match:* *gammai* “is known” against **jāṇvũ** and **know**; *gam-* against *āvvũ*’s “reach”

Before you move on

Say “I like Gujarati,” and name its subject. (*Mane gujarātī game chhe*; **Gujarati**.) Which Sanskrit form is *gamvũ* from, what kind is it, and which English verb is the same word? (*Gamyate*, the **passive** of *gam-*; **come**.) Why *madad karvī*? (*Madad* is feminine.) Sources: Wiktionary: ગામડું; Wiktionary: Sanskrit gamyate.

Chapter 10

Water, Tea, Milk, and Bread

Modes: 👁 eyes (4) ⇌ Hands-free start: all 4 lessons.

By the end of this chapter: I can politely ask for water, tea, milk, or bread in Gujarati, name which of the four is a loanword and which have no settled root beyond Sanskrit, and explain why a word ending in $\bar{i}$ is not automatically feminine.

The chapter closes on રોટલી, the request that breaks the drink pattern: the reader produces all four requests with મહેરબાની કરીને, sorts પાણી and દૂધ (inherited, known root) against ચા (loaned from Chinese by the overland route) against રોટલી (inherited, root unknown), and uses પાણી's neuter gender despite its $\bar{i}$ ending to show that રોટલી's own feminine $\bar{i}$ is a hint, not a rule.

10.1 પાણી — the first thing you'll actually ask for

Gamvũ let you say what you like; *madad karvī* let you ask for help. This chapter asks for something smaller and more frequent: a drink.

You'll want to know first — one word

પાણી — *pāṇī* — water

The letters in this word

પ *pa*, ા the long- $\bar{a}$ sign, ણ the retroflex η you already curled back in *jāṇvũ*, then ી long- $\bar{i}$. No bar runs across the top of any of them — the headless tell, working the same way in a noun as it did in a verb.

Grammar Lens: asking politely

પાણી, મહેરબાની કરીને. — *pāṇī, meherbānī karīne*. — **Water, please.**

મહેરબાની કરીને *meherbānī karīne* is built from મહેરબાની, “kindness” or “favor,” plus કરીને, “having done” — the same કરીને/કરવી family you met in મદદ કરવી, “to do a favor of help.” Literally: “having done a kindness.” Name the item, add this, and you have a complete polite request with no verb for “give” needed at all — the pattern this whole chapter will reuse.

The word, taken apart — its roots and family

pāṇī comes from Sanskrit **pānīya**, “that which is to be drunk,” built on **pā-**, “to drink.” That root is Indo-European, **peh₃(i)-*, and English holds two disguised pieces of it: **potion** and **poison** both come through Latin *potare*, “to drink” — a poison, etymologically, is just a drink gone wrong. Greek turned the same idea into *sympotēs*, “one who drinks together,” which English keeps as **symposium**. *Pāṇī* is not a stranger to those words; it is what “to drink” looks like when it never left the family that gave you *jāṇvū*’s Sanskrit cousin *jñā-*.

Your turn

- *Say it:* **pāṇī** — water
- *Say it:* **pāṇī, meherbānī karīne**. — water, please
- *Match:* **karīne** against **madad karvī**’s own **kar-** root
- *Trace it:* **pā-** “to drink” → **pāṇī**, and → **potion, poison, symposium**
- *Run through:* **mane gujarātī game chhe**, then **pāṇī, meherbānī karīne** — liking and requesting, side by side

Before you move on

Ask for water politely. (*Pāṇī, meherbānī karīne*.) What does *meherbānī karīne* mean word for word? (“Having done a kindness.”) Which two English words for a drink, and one for a whole gathering

of them, share *pāṇī*’s root? (**Potion, poison, symposium.**)
 Sources: Wiktionary: પાણી; Wiktionary: મહેરબાની.

10.2 ચા — the tea that went overland

Pāṇī, meherbānī karīne — water, please. The next drink uses the exact same pattern, and its own name has traveled further than water’s ever needed to.

You’ll want to know first — one word

ચા — *chā* — tea

ચા, મહેરબાની કરીને. — *chā, meherbānī karīne.* — Tea, please.

The letters in this word

ચ *cha* — the same letter that opened *chār*, “four,” and sat inside *vichār* — plus the long-*ā* sign. Two letters, both already yours.

The word, taken apart — its roots and family

ચા is a loanword — unlike **pāṇī**, which Gujarati has owned since Sanskrit. It came through Classical Persian *chā*, from Mandarin Chinese **chá**. That is the **overland** route, out through Central Asia and Persia: Hindi and Urdu *chāy*, Russian *chai*, Turkish *çay* all took the same road and the same syllable.

There is another route entirely. Chinese merchants on the coast spoke a different dialect, Hokkien, where the same word is *tê*. Dutch sailors picked that form up by **sea** and carried it into Europe: English **tea**, French *thé*, German *Tee*. One plant, one original Chinese word, and two pronunciations of it, sorted by whether a language met the word on a caravan route or a ship’s deck. Gujarati’s *chā* and English *tea* are, in that exact sense, the same word taken two different ways out of the same country.

Your turn

- *Say it:* **chā** — tea, and **chā, meherbānī karīne** — tea, please

- *Run through:* both requests — **pāṇī, meherbānī karīne; chā, meherbānī karīne**
- *Trace it:* Chinese *chá* → Persian *chā* → ચા, the overland road
- *Name:* one language that took the sea road instead, and its word (English, **tea**)

Before you move on

Ask for tea politely. (*Chā, meherbānī karīne.*) Did *chā* come by land or by sea? (**Land** — through Persian, from Mandarin.) Which English word for the same plant took the sea route instead, and through which language? (**Tea**, through Dutch.)

Sources: Wiktionary: ચા; Etymonline: chai.

10.3 દૂધ — a verb frozen into a noun

પાણી was never borrowed. ચા came the long way from China. The third drink is, like water, entirely Gujarati's own — but it got that way differently.

You'll want to know first — one word

દૂધ — *dūdh* — **milk**

દૂધ, મહેરબાની કરીને. — *dūdh, meherbānī karīne.* — **Milk, please.**

The letters in this word

દ *da*, ડ the long-*ū* sign below it, then ધ *dha* — the aspirated *d*, the same puff of breath that made ખ the aspirated *k* and બ the aspirated *b*. You have met the letter itself before, in વાંધો નહીં.

The word, taken apart — its roots and family

dūdh comes from Sanskrit **dugdha**, and *dugdha* is not, at root, a noun at all — it is the **past participle** of **duh-**, “to milk,” so it means literally “**milked**.” The action came first; the word for the substance is just that verb, frozen. It is the same trick *gamvū* played with “to please,” run on a different part of speech: a verb collapsing

into the thing it names.

The Indo-European root is **dheugh-*, “to be fit, useful, of avail.” Its Germanic descendant did not go on to mean milk in English at all — it survives in **doughty**, “valiant, capable,” from Old English *dohtig*, “of good use.” *Dūdh* and *doughty* are cousins by way of a root that once meant simply **being of use** — milk as *the useful thing*, valor as *the useful person*.

Your turn

- *Say it:* **dūdh** — milk, and **dūdh, meherbānī karīne** — milk, please
- *Run through:* all three requests so far — **pāṇī, chā, dūdh**, each with *meherbānī karīne*
- *Trace it:* *duh-* “to milk” → *dugdha* “milked” → **dūdh**, and → English **doughty**
- *Name:* which of the three drinks is a loanword (પાણી) and which two are not

Before you move on

Ask for milk politely. (*Dūdh, meherbānī karīne.*) What part of speech was *dugdha* before it became a noun for milk? (A **past participle** — “milked.”) Which unexpected English word for bravery shares its root with *dūdh*? (**Doughty.**)
Sources: Wiktionary: દૂધ; Etymonline: doughty.

10.4 રોટલી — a request pattern, run four times

Three drinks, one pattern: **pāṇī, chā, dūdh**, each followed by *meherbānī karīne*. The fourth request is food, not drink, and it closes the chapter by finally breaking a pattern instead of continuing one.

You’ll want to know first — one word

રોટલી — *roṭlī* — flatbread

રોટલી, મહેરબાની કરીને. — *roṭlī, meherbānī karīne.* — **Bread,**
please.

The letters in this word

ર *ra*, ે the *o* sign, then a new letter: ર, a retroflex *ṛ* — the tongue curls back the way it does for ર્, but here it stops the airflow instead of letting it through the nose. Then લ *la*, and ે long-ī. Headless throughout, like every letter you’ve met.

Grammar Lens: an -ī that does not mean “feminine, guaranteed”

રોટલી is feminine, and its ending fits: many Gujarati nouns ending in -ī are feminine, the same -ī you saw mark the feminine adjective ending in *sārī*. But you already own the counter-example: પાણી also ends in -ī, and *pāṇī* is **neuter**. The ending is a hint worth noticing, not a rule you can trust blind — every noun’s gender has to be learned with the noun, the way *madad karvī* forced કચ્છી into its feminine shape only because *madad* itself was feminine, not because of any ending on *karvī* alone.

The word, taken apart — its roots and family

roṭlī is inherited from Sanskrit **roṭikā**, “a kind of bread.” That much is certain. What *roṭikā* itself comes from is not: the standard comparative dictionaries weigh an unattested root meaning “to strike against” against another meaning “to crush,” and neither Turner nor Mayrhofer picks a winner.

That gives this chapter its own three-way dial, the same shape *jāṇvũ*, *levũ*, and *khāvũ* once drew for verbs: **pāṇī** and **dūdh** are inherited straight from Sanskrit with a full etymology behind them; **chā** is a loan, traceable to Mandarin by a known road; **roṭlī** is inherited too, but its own root is where recorded history simply stops.

Your turn

- *Say it:* **roṭlī, meherbānī karīne** — bread, please
- *Run through:* all four requests — **pāṇī, chā, dūdh, roṭlī**, each with *meherbānī karīne*

- *Sort*: inherited with a known root (**pāṇī**, **dūdh**), loaned (**chā**), inherited with an unknown root (**roṭlī**)
- *Contrast*: **roṭlī** feminine by its **-ī**, **pāṇī** neuter despite its **-ī**

Before you move on

Ask for bread politely. (*Roṭlī, meherbānī karīne.*) Does *roṭikā*'s own root have a settled answer? (**No** — the dictionaries disagree and leave it open.) Name one Gujarati noun ending in **-ī** that is feminine and one that is neuter. (**Roṭlī; pāṇī.**) Run all four requests from this chapter. (*Pāṇī, chā, dūdh, roṭlī*, each with *meherbānī karīne.*) Sources: Wiktionary: રોટલી; Wiktionary: Sanskrit rotika.

Chapter 11

Friend and Family

Modes: 👁 eyes (4) ⇌ Hands-free start: all 4 lessons.

By the end of this chapter: I can name a friend, a family, a brother, and a sister in Gujarati, explain which of these words was inherited whole from Sanskrit rather than worn down by sound change, and say which sibling word is genuinely a cousin of its English counterpart and which is not.

The chapter closes on બહેન, deliberately not a cousin of English sister: the reader produces મિત્ર, કુટુંબ, ભાઈ and બહેન, names ભાઈ as English brother’s unbroken cousin against બહેન’s unrelated (disputed bhaga-based) root, and names કુટુંબ as taken up whole from Sanskrit rather than worn down like the other three — while recalling that મિત્ર and મહેરબાની, taught a chapter apart, share the same ancient Indo-Iranian root.

11.1 મિત્ર — a friend, and the word inside your own “please”

Last chapter asked politely for **roṭlī** with *meherbānī karīne*. That phrase is about to turn out to share its root with the very first word of this new chapter.

You’ll want to know first — one word

મિત્ર — *mitra* — friend

The letters in this word

म *ma*, ि the short-*i* sign written **before** the consonant it belongs to — the same leftward quirk you saw open *vichārvũ* — then a conjunct: ढ — ढ *ta* with the virama ् stripping its vowel, joined straight into ढ *ra*. *Mi-tra*, two syllables, the second one a cluster.

The word, taken apart — its roots and family

mitra is Sanskrit for “friend,” from Proto-Indo-Iranian **mitras**, “(that which) causes binding” — a covenant word before it was a friendship word. Its exact twin is Avestan **Mithra**, the god of contracts and given word, whose name lived on in Middle Persian as **Mīhr**.

That is not a dead end. મહેરબાની, the “kindness” you built *meherbānī karīne* from last chapter, is Persian *mīhrbānī* — built on that very same **Mīhr**. So मित्र, inherited straight down from Sanskrit, and મહેરબાની, borrowed centuries later from Persian, are cousins by the same Indo-Iranian root — one word for “friend,” the other for “favor,” both once naming the same idea of a bond that holds.

Your turn

- *Say it:* **mitra** — friend
- *Trace it:* Proto-Indo-Iranian *mitras* → Avestan **Mithra** → Persian **Mīhr** → મહેરબાની
- *Connect:* मित्र and મહેરબાની — same ancient root, two different doors into Gujarati
- *Run through:* **roṭlī**, **meherbānī karīne** once more, now naming the “friend” root inside it

Before you move on

Give the word for “friend.” (*Mitra*.) Which other Gujarati word you already know shares its root, and through which language did each arrive? (મહેરબાની — *mitra* inherited from Sanskrit, *meherbānī* borrowed from Persian *mīhr*.) What did the shared root originally mean? (“**To bind**,” a covenant.)
Sources: Wiktionary: मित्र; Wiktionary: Mithra.

11.2 કુટુંબ — a word that skipped the sound changes

મિત્ર (*mitra*) reached Gujarati the long way, worn down through Prakrit like nearly every word you own. The word for the group a friend gets folded into took a different road entirely.

You'll want to know first — one word

કુટુંબ — *kuṭumb* — family

The letters in this word

ક *ka*, ુ the short-*u* sign below it, then ે — the same retroflex *ṭ* you first curled back in *roṭlī*, here doing the same job again. ુ closes it: *u* with the nasal dot on top, then બ *ba*. *Ku-ṭu-m-b*.

Grammar Lens: taken whole, not worn down

You have seen Sanskrit reach back into Gujarati once before: ર's *r*, restored after Prakrit had already dropped it — a **repair**, made to a word that had kept changing the whole time. કુટુંબ is a different kind of contact. Gujarati did not inherit this word through the centuries of sound change that gave you *pāṇī* or *be*; it took the Sanskrit word up **directly**, close to whole, the way a modern language reaches for a ready-made technical term instead of growing one on its own. Linguists call an inherited word like *pāṇī* **tadbhava**, “born from that,” and a direct borrowing like this one **tatsama**, “same as that” — *kuṭumb* is tatsama.

The word, taken apart — its roots and family

Here the trail runs further than usual, in an unexpected direction. Sanskrit **kuṭumba** is itself thought to be a **loanword**, taken from a Dravidian source and compared to Tamil *kuṭimai*, “family, lineage,” both built on *kuṭi*, “hut.” A word that looks purely Sanskrit, and that Gujarati then borrowed as purely Sanskrit, may have entered Sanskrit from a completely different family of languages first. The chain of ownership runs Dravidian → Sanskrit → Gujarati, with no step skipped and no step certain beyond reasonable comparison.

Your turn

- *Say it:* **kuṭumb** — family
- *Contrast:* **tadbhava** *pāṇī* (worn down over time) against **tatsama** *kuṭumb* (taken whole)
- *Match:* this “taken whole” idea against *traṇ*’s restored *r* — both are Sanskrit reaching forward, in different ways
- *Trace it:* proposed Dravidian *kuṭi* “hut” → Sanskrit *kuṭumba* → કુટુંબ

Before you move on

Give the word for “family.” (*Kuṭumb*.) Is it *tadbhava* or *tatsama*? (**Tatsama** — borrowed whole from Sanskrit, not worn down through Prakrit.) Where does Sanskrit’s own *kuṭumba* likely come from? (**Dravidian**, compared to Tamil *kuṭimai*.) Sources: Wiktionary: કુટુંબ; Wiktionary: Sanskrit kutumba.

11.3 ભાઈ — the same word as “brother,” unbroken

કુટુંબ (*kuṭumb*) was taken up whole, close to the finished Sanskrit shape. The two words for its members run the opposite way — worn all the way down, the ordinary path nearly every Gujarati word has followed.

You’ll want to know first — one word

ભાઈ — *bhāī* — brother

The letters in this word

ભ *bha*, the aspirated *b*, with the long-*ā* sign ા, then ઈ, the independent long-*ī* vowel standing on its own rather than attached to a consonant. *Bhā-ī*, two syllables, no consonant closing the second.

The word, taken apart — its roots and family

bhāī is inherited, through Prakrit *bhāī*, from Sanskrit **bhrātr̥**. Its root is Indo-European **b^hréh₂tēr*, and this is one of the cleanest cognate sets Indo-European linguistics has: Sanskrit *bhrātr̥*, English **brother**, Latin *frāter*, Greek *phrātēr*, Russian *brat* — every one of them the same word, carried down by ordinary sound change in every branch rather than borrowed by any of them. Where *kuṭumb* skipped the centuries of change that shape *tadbhava* words, *bhāī* is the textbook case of what those centuries do: the consonant cluster *bhr-* simplified once the *r* dropped, exactly the kind of wearing-down that gave you *pāṇī* from *pānīya*.

Your turn

- *Say it:* **bhāī** — brother
- *Trace it:* PIE *b^hréh₂tēr* → Sanskrit *bhrātr̥* → **भ्रातृ**, and → English **brother**
- *Contrast:* *bhāī* worn down over centuries against *kuṭumb* taken up whole
- *Name:* two other languages whose word for “brother” is the same cognate (Latin *frāter*, Greek *phrātēr*, or Russian *brat*)

Before you move on

Give the word for “brother.” (*Bhāī*.) Which English word is the very same word, by unbroken descent, not borrowing? (**Brother**.) Is *bhāī* *tadbhava* or *tatsama* — worn down, or taken whole like *kuṭumb*? (**Tadbhava** — worn down.)
Sources: Wiktionary: **भ्रातृ**; Wiktionary: *b^hréh₂tēr*.

11.4 भ्रातृ — the sister who is not “sister”’s cousin

भ्रातृ is English **brother**, unbroken, down to the root. Do not assume the sibling pair matches. This chapter’s last word breaks the pattern.

You'll want to know first — one word

બહેન — *bahen* — sister

The letters in this word

બ *ba*, હ *ha*, ે the *e* sign above the consonant, then ન *na*. *Ba-hen*, every letter already yours from earlier chapters.

The word, taken apart — its roots and family

Here is the surprise: બહેન is **not** *bhāī*'s counterpart the way English *sister* is *brother*'s. English *sister*, Latin *soror*, and Sanskrit *svasṛ* all descend from one shared PIE root, **swésōr*. Gujarati's word for sister does not use that root at all.

bahen comes from Sanskrit **bhaginī**, through Prakrit *bhaginī*. Scholars connect *bhaginī* to **bhaga**, “good fortune, a share” — the same *bhaga* behind *bhāgya*, “fate” — plus a feminine suffix, so “sister” may originally have meant something closer to “**the one who shares.**” That connection is debated rather than settled, the way *rotlī*'s root was: some scholars accept the *bhaga* link, others have argued against it. What is certain is what it is **not**: unlike *bhāī*, *bahen* is no relation to English *sister* at all — and unlike the disputed-but-real *mitra/meherbānī* pair, this dial lands on “unrelated,” full stop.

Your turn

- *Say it*: **bahen** — sister, and **bhāī** — brother
- *Contrast*: *bhāī* — same root as English *brother*; *bahen* — a different Sanskrit word entirely, not *sister*'s cousin
- *Trace it*: proposed *bhaga* “share, fortune” → *bhaginī* → બહેન
- *Run through*: all four family words — **mitra**, **kuṭumb**, **bhāī**, **bahen** — inherited/borrowed, direct/indirect
- *Recall*: મિત્ર and મહેરબાની's shared root from the last chapter, and કુટુંબ's proposed Dravidian root

Before you move on

Give the word for “sister.” (*Bahen.*) Is it the same root as English *sister*? (**No** — that connection belongs to *bhāī*/**brother** instead.) What does *bahen* probably come from? (Sanskrit *bhaginī*, disputedly tied to *bhaga*, “share.”) Name this chapter’s four people and things: friend, family, brother, sister. (*Mitra*, *kuṭumb*, *bhāī*, *bahen*.) Sources: Wiktionary: भगिनी; Wiktionary: Sanskrit bhagini.

Chapter 12

Eye, Ear, Mouth, and Nose

Modes: 👁 eyes (4) ⇌ Hands-free start: all 4 lessons.

By the end of this chapter: I can name the eye, ear, mouth, and nose in Gujarati, tell a nasal that only marks a sound from one that marks the neuter gender, and say which two of the four are unbroken cousins of their English counterparts.

The chapter closes on નાક, completing the face: the reader produces અંખ, કાન, મોઢું and નાક with their genders (f, f, n, n), names અંખ and નાક as unbroken PIE cousins of eye and nose, states that મોઢું's nasalized -ũ is the same neuter tell carried by every -જું verb infinitive while નાક shows a neuter noun does not always carry it, and reaches back to વાંચવું's medial nasal and જવું/જોવું's one-mark contrast.

12.1 અંખ — an eye, and a nasal that is not what it looks like

બહેન (*bahen*) closed a chapter about people. This chapter checks on how someone is — starting with the parts of the body a friend might actually ask about.

You'll want to know first — one word

અંખ — *āṅkh* — eye

The letters in this word

અ the independent long-*ā*, then the nasal dot ં sitting on top of it — exactly the medial anusvāra you first read inside વાંચવું, doing the same job here, in

the middle of a noun rather than a verb — then अ, the aspirated *k*. **Note what this nasal is NOT:** it does not mark अक्षि as neuter — the word is feminine. A nasal dot in the middle of a word is a **sound**, present or absent as pronunciation happens to need it; it is a different thing entirely from the grammatical *-ũ* ending you will meet again soon, and this chapter keeps the two apart on purpose.

The word, taken apart — its roots and family

āṅkh is inherited from Sauraseni Prakrit *akkhi*, from Sanskrit **akṣi**, “eye.” The root is Indo-European **h₃ek^w*-, “eye; to see,” and it survives unbroken in English **eye** itself, in Latin *oculus* (behind **ocular**), and in Greek *ósse*. This is *bhār*’s kind of cousin, not *bahen*’s: a straight line back to the same ancestor, no borrowing and no detour.

Your turn

- *Say it:* **āṅkh** — eye
- *Match:* the medial nasal here against the one in अक्षि
- *State:* is this nasal a gender marker? (No.) Is **āṅkh** neuter? (No — feminine.)
- *Trace it:* PIE *h₃ek^w*- → Sanskrit *akṣi* → अक्षि, and → English **eye**

Before you move on

Give the word for “eye.” (*Āṅkh.*) Which English word is the same word by unbroken descent? (**Eye.**) Does the nasal dot in *āṅkh* mean the word is neuter? (**No** — *āṅkh* is feminine; the dot is only a sound.)

Sources: Wiktionary: अक्षि; Wiktionary: Sanskrit akshi.

12.2 क्षन् — an ear whose own root is unsettled

अक्षि traced back cleanly to a confirmed Indo-European root. The next body part will not be nearly as tidy.

You’ll want to know first — one word

क्षन् — *kān* — ear

The letters in this word

ક ka, ા long-ā, ન na. All three already yours.

Grammar Lens: a gender that changed on the way here

કાન is feminine in Gujarati. Its Sanskrit ancestor, **karṇa**, was **masculine**. Nothing about inheriting a word guarantees its gender comes along unchanged — મિત્ર kept Sanskrit’s masculine, but *kān* did not keep *karṇa*’s. Gender, like the gender of આંખ or બહેન, has to be learned with each noun as it stands today, not projected backward from what its ancestor was — the same caution રોટલી’s chapter drew from its own -ī ending.

The word, taken apart — its roots and family

kān is inherited from Old Gujarati *kāna*, through Apabhramsa and Prakrit *kaṇṇa*, from Sanskrit **karṇa**, “ear.” Past that point, no agreement exists. Proposed origins include a root for “**defect**” (with “ear” as a later, narrower sense), a root meaning “**point**” or “**spike**,” a root meaning “**handle**” or “**grip**,” and a connection to **śṛṇoti**, “to hear.” None of these has won out. *Kān* joins *roṭlī* as a second word in your Gujarati vocabulary whose Sanskrit form is certain and whose deeper root is not — the honest answer, said plainly rather than picked at random.

Your turn

- *Say it:* **kān** — ear, and **āṅkh** — eye
- *State:* *karṇa*’s Sanskrit gender against *kān*’s Gujarati gender (masculine → feminine)
- *Name:* two of the four disputed origins scholars have proposed for *karṇa*
- *Contrast:* *āṅkh*’s confirmed PIE root against *kān*’s unsettled one

Before you move on

Give the word for “ear.” (*Kān*.) Did its gender change between Sanskrit and Gujarati? (**Yes** — masculine to feminine.) Is *karṇa*’s own root settled? (**No** — several proposals, no agreement.)

Sources: Wiktionary: कान्; Wiktionary: Sanskrit karna.

12.3 म॒ळ॑ — the tell you have been hearing all along

कान् (*kān*)’s own gender shifted away from Sanskrit’s. The next body part wears its gender in plain sight — the same nasalized ending you have heard on nearly every verb in this book.

You’ll want to know first — one word

म॒ळ॑ — *moḍhũ* — **mouth**

The letters in this word

म *ma*, ळ the *o* sign, then a new letter: ढ, the retroflex aspirated *ḍh* — curl the tongue back as for ढ and ण, and add the puff of breath that made ध aspirated. Then ण, *u* with the nasal dot. *Mo-ḍhũ*.

Grammar Lens: the neuter tell, named plainly

Every verb infinitive in this book ends in the neuter -ञ्: *hovũ, javũ, jāṇvũ, lakhvũ* — a whole word class marked by that one nasalized ending. म॒ळ॑ shows the same ending doing the same job on a **noun**: *moḍhũ* is **neuter**, and the nasalized -*ũ* is the single most recognizable tell for it. Not every neuter noun wears it — पाली and पाल do not — but when you do see or hear a word end this way, neuter is the way to bet. And do not confuse it with अलि’s nasal: that one sat in the **middle** of a feminine word and marked nothing about gender at all. This one sits at the **end**, and it does.

The word, taken apart — its roots and family

moḍhũ is inherited from Sauraseni Prakrit **muha**, from Sanskrit **mukha**, “mouth, face.” It has a formal doublet, मुख *mukh*, borrowed directly from the same Sanskrit word the way *kuṭumb* was — the everyday and the formal register, side by side, from one ancestor reached by two different roads. Past Sanskrit, *mukha*’s own root is not agreed upon — a second open question, alongside *karṇa*’s, rather than

a guess dressed up as an answer.

Your turn

- *Say it:* **moḍhũ** — mouth
- *State:* what gender the *-ũ* ending marks, and one verb infinitive that wears the same ending
- *Contrast:* *moḍhũ*'s end-of-word nasal against *āñkh*'s middle-of-word one
- *Name:* *moḍhũ*'s formal doublet, and how it reached Gujarati (borrowed whole, like *kuṭumb*)

Before you move on

Give the word for “mouth.” (*Moḍhũ.*) What gender does its *-ũ* ending mark? (**Neuter.**) Name the formal doublet of *moḍhũ*. (મુખ, *mukh.*)

Sources: Wiktionary: મૂં; Wiktionary: Sanskrit mukha.

12.4 નાક — the whole face, run back

આંખ, કાન, મોઢું — eye, ear, mouth. One more completes the face, and this one closes the chapter by tying its ending back to a pattern from three chapters ago.

You'll want to know first — one word

નાક — *nāk* — nose

The letters in this word

ના *na*, ા long-*ā*, ક *ka*. Every letter already familiar — *nāk*'s only new information is the word itself.

Grammar Lens: closing the chapter's gender count

નાક is neuter, like મોઢું — but unlike *moḍhũ*, it carries no nasalized *-ũ* at all. Run the whole face: *āñkh* feminine, *kān* feminine, *moḍhũ* neuter

with the tell, *nāk* neuter without it. Two neuters, only one of them wearing the ending that names the class. This is exactly why last lesson called the nasalized *-ũ* a **tell**, not a **rule**: it is the loudest signal Gujarati gives you for neuter, and it is still only sometimes there — the same caution *roṭlī* and *pāṇī* already taught you about *-ī*, and *kān*’s Grammar Lens taught you about gender and inheritance more generally.

The word, taken apart — its roots and family

nāk is inherited from Prakrit **ṇakka**, from Sanskrit **nas**, “nose,” with a suffix added along the way — the retroflex **ṇ** here is the same sound-shift you first met turning *jānāti* into *jāṇvũ*, a single letter’s worth of difference deciding a great deal, the way one mark once told *javũ* apart from *jovũ*. The root is Indo-European **nehas-*, unbroken in English **nose**, Latin *nāsus* (behind **nasal**), and Lithuanian *nósis*. Like *āṅkh*, *nāk* needed no ship and no loan to reach you — only the ordinary work of sound change, the same work that once put a nasal dot in the middle of **વિચ્છ** and, this chapter, in the middle of **અંખ**.

Your turn

- *Say it*: all four face words — **āṅkh**, **kān**, **moḍhũ**, **nāk**
- *Sort*: gender of each — feminine, feminine, neuter, neuter
- *State*: which of the two neuters carries the *-ũ* tell, and which does not
- *Trace it*: PIE *nehas-* → Sanskrit *nas* → **नस**, and → English **nose**
- *Recall*: the medial nasal in **વિચ્છ**, and the one-mark contrast between **જ્ઞ** and **જ્ઞ**

Before you move on

Give the word for “nose.” (*Nāk*.) Which English word is the same word by unbroken descent? (**Nose**.) Name this chapter’s four body words and their genders. (*Āṅkh* f., *kān* f., *moḍhũ* n., *nāk* n.) Which neuter noun wears the nasalized *-ũ* tell, and which does not? (*Moḍhũ* does; *nāk* does not.)
Sources: Wiktionary: **नस**; Wiktionary: Sanskrit *nas*.

Chapter 13

The Headless Script, One Piece at a Time

Modes: ✍ pen (10) ⇄ Hands-free start: none of the 10 lessons.

By the end of this chapter: I can write nine Gujarati pieces from memory — four consonants, two vowel signs, an independent vowel and the virama — and read the words for yes, no and the greeting by assembling them from those pieces rather than recalling the words whole.

The greeting assembled from six pieces the reader can each write from memory, including the conjunct, and introducing nothing new at all.

13.1 ્ — the consonant ha

Nothing is assumed but the words you can already say. This chapter turns them into words you can read.

Script

Gujarati is written with an **abugida**, and that word is doing a lot of work. It is not an alphabet, where each letter is one sound. It is a system where **a consonant already carries a vowel**, and you only write a vowel when you want a different one.

Here is the first consonant:

હ

That is not *h*. It is **ha** — the consonant *h* with an **a** already inside it, the *a* of English *about*. Nobody wrote that vowel. It is there because a bare consonant in this script is understood to carry it, and this is called the **inherent vowel**.

Look at the shape while you say it. Notice what is **not** there: no line across the top. Gujarati is Devanagari's sister and the two share most of their skeleton, but Devanagari hangs its letters from a horizontal bar and Gujarati has erased it. The letters float. That single missing line is how you tell the two scripts apart at a glance, and it is why Gujarati is sometimes called **the headless script**.

Your turn

- *Write it:* ૐ
- *Read it:* every piece this chapter has given you so far, in order

Before you move on

What vowel does a bare consonant carry? (**a** — the inherent vowel, unwritten.) And what is the one visible difference from Devanagari? (**No line across the top.**)
Source: Unicode Gujarati chart.

13.2 ૐ — the vowel sign that replaces the inherent a

Write the piece from the previous lesson before adding another.

Script

The inherent **a** is a default. To get a different vowel you **replace** it, and you replace it with a mark called a **mātrā**.

Here is the first one:

઼

On its own it is nothing — a vertical stroke you would never write alone. It only means anything **attached to a consonant**, where it swaps the inherent short *a* for a long **ā**, the *a* of English *father*.

Put it on the consonant you just learned:

હ + ા → હા

hā. And that is a word — it is **yes**, and you have been saying it since your first lesson in this language.

Take the measure of that. You learned one consonant and one mark, and a word you already knew how to say became a word you can **read**. Nothing was memorised as a picture.

Your turn

- *Write it:* ા
- *Read it:* every piece this chapter has given you so far, in order

Before you move on

What does a mātrā do to the inherent vowel? (**Replaces** it.) What word did those two pieces make? (હા — *hā*, “yes”).

Source: Unicode Gujarati chart.

13.3 આ — the SAME vowel standing alone

Write the piece from the previous lesson before adding another.

Script

Now a distinction that trips up every beginner in every Indic script, and it is worth meeting deliberately rather than by accident.

The mark you just learned only works **attached to a consonant**. So what do you write when a word **starts** with that vowel, with no consonant to hang it on?

You write a different character:

આ

That is *ā* as well — the same sound — but it is an **independent vowel**, a full letter that stands on its own at the start of a word.

These are two different characters, not two styles of one. They look related because they are, and a computer, a font and this book all treat them as completely separate. Confusing them is the commonest spelling error in the script.

So what decides which one you write is **position**, not sound:

- અ begins a word.
- ા rides on a consonant.

You already know a word that opens with the independent one — the word for *thanks* — and you will be able to read the whole of it shortly.

Your turn

- *Write it:* અ
- *Read it:* every piece this chapter has given you so far, in order

Before you move on

Which of the two starts a word? (અ, the independent vowel.)
Which one attaches to a consonant? (ા, the mātrā.) And are they the same character? (**No** — two separate characters for one sound.)
Source: Unicode Gujarati chart.

13.4 ન — the consonant na

Write the piece from the previous lesson before adding another.

Script

ન

na, with the same inherent **a** inside it. The *n* of English *net*, then the vowel nobody wrote.

Now put the mātrā on it, exactly as you did with the first consonant:

ન + ા → ના

nā — and that is **no**.

You now hold both answers to a yes-or-no question, and you can read them both off the page:

હા ના

Two consonants and one mark. That is the arithmetic of an abugida: consonants and vowel signs multiply, so a small number of pieces reaches a large number of syllables very quickly.

Your turn

- *Write it:* ઋ
- *Read it:* every piece this chapter has given you so far, in order

Before you move on

What is ઋ? (**No.**) How many separate pieces did it take? (**Two** — a consonant and a mātrā.) And what does the bare consonant sound like on its own? (**na**, with the inherent vowel.)
Source: Unicode Gujarati chart.

13.5 ઋ — the consonant ma

Write the piece from the previous lesson before adding another.

Script

ઋ

ma. The *m* of English *met*, with the inherent **a** riding along.

Nothing new in the machinery this time — this is simply another consonant, and the rules you already have apply to it unchanged. Add the mātrā and you would get *mā*; leave it bare and it is *ma*.

That is worth saying plainly, because it is the payoff of learning the system rather than the words. **Every consonant from here behaves exactly like the two you already know.** There are no new rules coming for them, only new shapes.

Write it beside the two you have. Three letters, floating, no bar across the top.

Your turn

- *Write it:* ઋ
- *Read it:* every piece this chapter has given you so far, in order

Before you move on

What vowel is inside **ઞ** when nothing is attached? (**a.**) And what would **ઞ** plus the mātrā you know sound like? (**mā.**)
Source: Unicode Gujarati chart.

13.6 સ — the consonant sa

Write the piece from the previous lesson before adding another.

Script

સ

sa. The *s* of English *sit*, plus the inherent vowel.

You are four consonants and one mātrā into this script, and every one of them has behaved the same way. Say the four aloud in the order you met them, each with its inherent vowel:

હ ન મ સ

ha, na, ma, sa. Four beats, four shapes, no bar across any of them.

Your turn

- *Write it:* સ
- *Read it:* every piece this chapter has given you so far, in order

Before you move on

Say the four consonants you now hold, each with its inherent vowel. (**ha, na, ma, sa.**)
Source: Unicode Gujarati chart.

13.7 ટ — the consonant ta

Write the piece from the previous lesson before adding another.

Script

ઢ

ta — and the consonant is not quite the English one.

English *t* is made with the tongue on the **ridge behind** the teeth. This one is **dental**: the tongue touches the **back of the upper teeth themselves**, further forward. It sounds softer to an English ear, and getting it right is one of the quickest ways to stop sounding foreign.

The script will make you care about this shortly, because it has a **second** *t* made even further back, and the two are different letters and different words. This is the forward one.

Your turn

- *Write it*: ઢ
- *Read it*: every piece this chapter has given you so far, in order

Before you move on

Where does the tongue go for ઢ? (Against the **back of the upper teeth** — dental, not on the ridge.) And is there another *t* in this script? (**Yes**, one made further back.)

Source: Unicode Gujarati chart.

13.8 ે — a mātrā that sits ABOVE the letter, not beside it

Write the piece from the previous lesson before adding another.

Script

A second vowel sign, and it introduces something the first one did not.

ે

This is **e**, the vowel of English *bed*. And unlike the mātrā you already know, which stands to the **right** of its consonant, this one sits **above** it:

ઢ + ે → ઢે

te. One beat, still — the mark changes the vowel, never the count.

Where a mātrā sits is not decoration. In this family of scripts a vowel sign can go to the right, to the left, above, below, or even on both sides at once, and the position is part of the character's identity. A reader learns to look **around** a consonant, not just after it.

Your turn

- *Write it:* ે
- *Read it:* every piece this chapter has given you so far, in order

Before you move on

Where does this mātrā sit? (**Above** the consonant.) Does it add a beat? (**No** — it replaces the vowel, it does not add one.)
Source: Unicode Gujarati chart.

13.9 ્ — the mark that DELETES the inherent vowel, and glues two consonants together

Write the piece from the previous lesson before adding another.

Script

One piece of machinery left, and it is the one that makes the script's hardest shapes make sense.

The inherent vowel is a nuisance when you do not want it. If a word has two consonants pressed together with no vowel between them, writing them plainly would insert an *a* that is not there.

So there is a mark that **removes** it:

્

This is the **virama**. Attached under a consonant, it says: *no vowel here*.

And then something happens that no European alphabet does. A consonant stripped of its vowel does not usually sit there bare — it **fuses** with the consonant after it into a single joined shape called a **conjunct**:

૨ + ્ + ઢ → ૨ૢ

sta, one cluster. You can still see both letters in it if you look, and that is the trick to reading conjuncts: they are not new characters to memorise, they are two you already know, joined.

Your turn

- *Write it:* ્
- *Read it:* every piece this chapter has given you so far, in order

Before you move on

What does the virama do? (**Removes the inherent vowel.**) And what usually happens to a consonant that loses its vowel? (It **joins** the next one into a conjunct.)
Source: Unicode Gujarati chart.

13.10 નમસ્તે — five pieces, all of them already yours

Write the piece from the previous lesson before adding another.

Script

Everything in this word is something you can already write. Nothing new is introduced here at all.

ન + મ + સ + ્ + ત + ે → નમસ્તે

Read it the way you built it:

- ન — *na*, inherent vowel
- મ — *ma*, inherent vowel
- સ્ત — the conjunct: *sa* with its vowel removed, fused to *ta*
- ે — the mātrā above, making that last piece *te*

na-ma-ste. The greeting you learned in your first lesson, now decoded rather than recalled.

Look back at what it took: **four consonants, two vowel signs, one virama, and one independent vowel.** With them you can read *yes, no*, and the greeting — and every consonant you meet from here obeys rules you already hold, so the next word costs you shapes and no new machinery.

The script has around forty more letters. It does not have any more **systems.**

Your turn

- *Write it:* નમસ્તે
- *Read it:* every piece this chapter has given you so far, in order

Before you move on

How many new pieces were in this lesson? (**None.**) What is રત made of? (ર with its vowel removed, joined to ત.) And what does the mark above the last letter do? (Makes it *te* instead of *ta*.)

Source: Unicode Gujarati chart.

The Gujarati script — a reference

Not to be read before the lessons — they teach reading through real words.
This page gathers the system.

The three facts

1. **Consonants carry a built-in “a.”** ક ka, ન na, મા ma — written left to right. The shapes are Devanagari’s, minus one thing (see below).
2. **A vowel sign changes it.** કા kā, કિ ki, કી kī, કુ ku, કે ke, કો ko. The *i*-sign િ is written *before* the consonant but read *after* it. An *anusvāra* ં nasalises the vowel.
3. **A *virama* removes the vowel**, and the bare consonant joins the next as a conjunct: રા + ં + દ → રદ.

Worth flagging

- **No top line.** This is the one thing to remember. Devanagari, Bengali, and Gurmukhi hang their letters from a horizontal bar (the *shirorekha*); Gujarati cut it away, so its letters stand free. It is the fastest way to tell Gujarati from Hindi at a glance — “the headless script.”
- **The extra letter ળ (ḷ).** A **retroflex l**, tongue curled back — shared with Marathi and the Dravidian south, absent from Hindi. It appears in *maḷvū* (“to meet”).
- **Three genders.** Gujarati keeps Sanskrit’s masculine, feminine, *and* neuter (Hindi collapsed to two), marking gender on adjectives and possessives: *sāro* (m.) / *sārī* (f.) / *sārū* (n.).

Gujarati in the family

Gujarati is **Indo-Aryan** (from Sanskrit, like Hindi, Marathi, Punjabi, Bengali), spoken in Gujarat and across a large diaspora — the mother tongue of Mahatma Gandhi. Its Sanskrit core is shared with Hindi; its heavy **Perso-Arabic** layer (and a few Portuguese words from the coastal ports) is the mark of centuries as a great trading language across the Arabian Sea. The lessons trace both threads.

Glossary

This glossary collects every word and phrase taught in the book. Pronunciation appears when it differs from the written form; chapter numbers show where each entry is introduced.

આંખ *āṅkh*

eye — a straight cousin of the English word, and a nasal mark that is not the neuter tell you might expect
Introduced in Chapter 12.

આવવું *āvṽṽ*

to come — from a root meaning “reach,” and a cousin of the word copula
Introduced in Chapter 7.

બહેન *bahen*

sister — which, unlike its brother, is not the same word as the English one at all
Introduced in Chapter 11.

ભાઈ *bhāī*

brother — the plainest possible cousin of the English word for the very same person
Introduced in Chapter 11.

ચા *chā*

tea — a word that took the overland road out of China, so it rhymes with Hindi and Persian rather than with English
Introduced in Chapter 10.

દૂધ *dūdh*

milk — inherited straight from Sanskrit, and a root English keeps in an unexpected word
Introduced in Chapter 10.

એક બે ત્રણ ચાર પાંચ *ek be traṇ chār pāch*

one to five — the two numbers that don’t look like their neighbours’
Introduced in Chapter 6.

ગમવું *gamvũ*

to like — the chapter’s payoff, a verb that will not let you be its subject, born as the passive of “to go”
Introduced in Chapter 9.

હોવું *hovũ*

to be — and the neuter ending that names every Gujarati verb
Introduced in Chapter 7.

જાણવું *jāṇvũ*

to know — the word English has been carrying all along
Introduced in Chapter 7.

જવું *javũ*

to go — and the Sanskrit y- that Prakrit turned into j-
Introduced in Chapter 7.

જોવું *javũ*

to see — one vowel sign away from “to go,” and an origin still argued over
Introduced in Chapter 7.

કાન *kān*

ear — a word Sanskrit itself could not settle the origin of, and one that changed gender on the way to Gujarati
Introduced in Chapter 12.

ખાવું *khāvũ*

to eat — the verb whose family reaches its Indian sisters and stops there
Introduced in Chapter 7.

કુટુંબ *kuṭumb*

family — the whole group, and a word that arrived in Gujarati already finished rather than growing there
Introduced in Chapter 11.

લખવું *lakhvũ*

to write — the chapter’s payoff, on a root that meant to scratch, and a family that stops before English again
Introduced in Chapter 8.

લેવું *levũ*

to take — the shortest verb yet, and a family tree that is disputed rather than empty
Introduced in Chapter 9.

મદદ કરવી *madad karvī*

to help — an Arabic word that came by way of Persian, and the one place the verb ending stops being neuter
Introduced in Chapter 9.

મિત્ર *mitra*

friend — a word this chapter will link to the very phrase you used to ask for water
Introduced in Chapter 11.

મોઢું *modhũ*

mouth — the clearest example yet of Gujarati’s neuter tell, the nasalized -ũ you have been hearing on every verb
Introduced in Chapter 12.

નાક *nāk*

nose — the fourth body word, closing the chapter by running the whole face back through gender, sound, and certainty
Introduced in Chapter 12.

પાણી *pāṇī*

water — Gujarati’s first noun for something you would actually ask for, and the phrase that asks for it politely
Introduced in Chapter 10.

પૂછવું *pūchhvũ*

to ask — the verb English kept only for praying, and a p that stayed put because of where it stood
Introduced in Chapter 9.

રોટલી *roṭlī*

flatbread — the fourth request, an honest dead end for its origin, and the letter -ī does not always mean what you’d guess
Introduced in Chapter 10.

સમજવું *samajvũ*

to understand — built on a root that meant “to wake up,” and the cluster it lost on the way

Review Questions

Try these without looking ahead. Every prompt comes from the same canonical lesson data as its chapter. Answers begin in the next section.

Chapter 6

6.1 *Two number histories: be and tran*

Does Gujarati be descend from the same Sanskrit form as Hindi do?

Answer Key

The first response is the canonical display answer. When a question accepts other authored forms, they appear underneath.

Chapter 6

6.1 *Two number histories: be and tran*

Answer: no

Also accepted: no it does not; different Sanskrit forms

Index

Look up an English meaning, a dedicated language topic, or a chapter topic. Each linked reference opens the chapter where the material is introduced; the focus labels name only explicitly typed lesson sections.

A

◌̐ — **a mātrā that sits ABOVE the letter, not beside it**

script and writing topic; explicit focus: script; Chapter 13, p. 89

again, back બાલ (bāl)

explicit focus: script, etymology; Chapter 4, p. 25

B

brother — the plainest possible cousin of the English word for the very same person ભાઈ (bhāī)

explicit focus: script, etymology; Chapter 11, p. 75

E

ear — a word Sanskrit itself could not settle the origin of, and one that changed gender on the way to Gujarati કાન (kān)

explicit focus: script, grammar, etymology; Chapter 12, p. 83

enjoyment, fun — and the reply “હું મજામાં છું” મજા

explicit focus: script, etymology; Chapter 3, p. 19

eye — a straight cousin of the English word, and a nasal mark that is not the neuter tell you might expect આંખ (āṅkh)

explicit focus: script, etymology; Chapter 12, p. 83

Eye, Ear, Mouth, and Nose

chapter topic; Chapter 12, p. 83

F

family — the whole group, and a word that arrived in Gujarati already finished rather than growing there કુટુંબ (kuṭumb)

explicit focus: script, grammar, etymology; Chapter 11, p. 75

Farewells

chapter topic; Chapter 4, p. 25

flatbread — the fourth request, an honest dead end for its origin, and the letter -ī does not always mean what you’d

guess રોટલી (roṭlī)

explicit focus: script, grammar, etymology; Chapter 10, p. 67

friend — a word this chapter will link to the very phrase you

used to ask for water મિત્ર (mitra)

explicit focus: script, etymology; Chapter 11, p. 75

Friend and Family

chapter topic; Chapter 11, p. 75

G

good, okay, fine (sārū) સારું

explicit focus: script, grammar, etymology; Chapter 1, p. 1

goodbye (lit. “[please] come [again]”) અલવજો

explicit focus: script, etymology; Chapter 2, p. 9

no problem / it’s okay / you’re welcome વાંધો નહીં

explicit focus: script, etymology; Chapter 3, p. 19

nose — the fourth body word, closing the chapter by running the**whole face back through gender, sound, and certainty નાક (nāk)**

explicit focus: script, grammar, etymology; Chapter 12, p. 83

Numbers One to Five

chapter topic; Chapter 6, p. 37

O**one to five — the two numbers that don’t look like their****neighbours’ એક બે ત્રણ ચાર પાંચ (ek be traṇ chār pāch)**

Chapter 6, p. 37

P

pleased to meet you (lit. “meeting you, joy happened”) તમને મળીને
આનંદ થયો

explicit focus: script, etymology; Chapter 2, p. 9

S

see you tomorrow (and the કાલ puzzle) કાલે મળીશું

explicit focus: script, etymology; Chapter 4, p. 25

**sister — which, unlike its brother, is not the same word as the
English one at all** બહેન (bahen)

explicit focus: script, etymology; Chapter 11, p. 75

Six Verbs at the Core

chapter topic; Chapter 7, p. 41

T

Taking, Asking, Helping, Liking

chapter topic; Chapter 9, p. 59

**tea — a word that took the overland road out of China, so it
rhymes with Hindi and Persian rather than with English** ચા (chā)

explicit focus: script, etymology; Chapter 10, p. 67

thank you (ābhār) આભાર

explicit focus: script, etymology; Chapter 1, p. 1

The First Verbs

chapter topic; Chapter 5, p. 31

The Headless Script, One Piece at a Time

chapter topic; Chapter 13, p. 89

**્ — the mark that DELETES the inherent vowel, and glues two
consonants together**

script and writing topic; explicit focus: script; Chapter 13, p. 89

The Mind and the Page

chapter topic; Chapter 8, p. 51

઼ — the vowel sign that replaces the inherent a

script and writing topic; explicit focus: script; Chapter 13, p. 89

**to ask — the verb English kept only for praying, and a p that
stayed put because of where it stood** પૂછવું (pūchhvũ)

explicit focus: script, etymology; Chapter 9, p. 59

**to be — and the neuter ending that names every Gujarati
verb** હોવું (hovũ)

explicit focus: grammar, etymology; Chapter 7, p. 41

to come — from a root meaning “reach,” and a cousin of the word copula આવડું (āvvũ)

explicit focus: etymology; Chapter 7, p. 41

to eat — the verb whose family reaches its Indian sisters and stops there ખાડું (khāvũ)

explicit focus: etymology; Chapter 7, p. 41

to go — and the Sanskrit y- that Prakrit turned into j- જડું (javũ)

explicit focus: grammar, etymology; Chapter 7, p. 41

to help — an Arabic word that came by way of Persian, and the one place the verb ending stops being neuter મદદ કરવી (madad karvī)

explicit focus: script, grammar, etymology; Chapter 9, p. 59

to know — the word English has been carrying all along જાણડું (jāṇvũ)

explicit focus: etymology; Chapter 7, p. 41

to like — the chapter’s payoff, a verb that will not let you be its subject, born as the passive of “to go” ગમડું (gamvũ)

explicit focus: script, grammar, etymology; Chapter 9, p. 59

to live, to stay રહેડું

explicit focus: script, grammar, etymology; Chapter 5, p. 31

to read — which once meant “to make something speak,” and a nasal that lives in the middle of the word વાંચડું (vāchvũ)

explicit focus: script, etymology; Chapter 8, p. 51

to see — one vowel sign away from “to go,” and an origin still argued over જોડું (jovũ)

explicit focus: etymology; Chapter 7, p. 41

to speak બોલડું

explicit focus: script, grammar, etymology; Chapter 5, p. 31

to take — the shortest verb yet, and a family tree that is disputed rather than empty લેડું (levũ)

explicit focus: script, grammar, etymology; Chapter 9, p. 59

to think — a verb Gujarati built for itself, on a root that meant to wander વિચારડું (vichārvũ)

explicit focus: script, etymology; Chapter 8, p. 51

to understand — built on a root that meant “to wake up,” and the cluster it lost on the way સમજડું (samajvũ)

explicit focus: script, etymology; Chapter 8, p. 51

to work (lit. “work-do”) કામ કરડું

explicit focus: script, etymology; Chapter 5, p. 31

to write — the chapter’s payoff, on a root that meant to scratch, and a family that stops before English again લખડું (lakhvũ)

explicit focus: script, etymology; Chapter 8, p. 51

Two number histories: *be* and *tran*

etymology topic; explicit focus: etymology; Chapter 6, p. 37

W**water** — Gujarati's first noun for something you would actually ask for, and the phrase that asks for it politely પાણી (pāṇī)

explicit focus: script, grammar, etymology; Chapter 10, p. 67

Water, Tea, Milk, and Bread

chapter topic; Chapter 10, p. 67

we'll meet again (goodbye) પાછા મળીશું

explicit focus: etymology; Chapter 4, p. 25

(we) will meet મળીશું

explicit focus: script, grammar, etymology; Chapter 4, p. 25

what શું

explicit focus: script, etymology; Chapter 2, p. 9

what's your name? તમારું નામ શું છે?

explicit focus: grammar; Chapter 2, p. 9

Y**yes / no** (hā / nā) હા / ના

explicit focus: script, etymology; Chapter 1, p. 1

you (familiar / respectful) તું / તમે

explicit focus: script, etymology; Chapter 2, p. 9

Other**અ** — the SAME vowel standing alone

script and writing topic; explicit focus: script; Chapter 13, p. 89

ત — the consonant **ta**

script and writing topic; explicit focus: script; Chapter 13, p. 89

ન — the consonant **na**

script and writing topic; explicit focus: script; Chapter 13, p. 89

પાંચ — five pieces, all of them already yours

script and writing topic; explicit focus: script; Chapter 13, p. 89

મ — the consonant **ma**

script and writing topic; explicit focus: script; Chapter 13, p. 89

સ — the consonant **sa**

script and writing topic; explicit focus: script; Chapter 13, p. 89

હ — the consonant **ha**

script and writing topic; explicit focus: script; Chapter 13, p. 89
